

Electric-Drive Vehicle Report

2006

Electric Transportation Group
December 2006

January 2007

Dear Stakeholder:

Enclosed please find the results of the 2006 Electric-Drive Vehicle Mileage Survey. For the second year in a row customer vehicle usage averaged a million miles annually, resulting in more than 6.5 million miles traveled since the inception of our electric-drive transportation programs.

This year we surveyed over 160 customers and received mileage readings for 500 vehicles. These vehicles are being operated in more than 33 counties across the State; as far north as Rouses Point and south to Staten Island. That represents over 50% of all counties in New York State. In addition, these customers are using electric-drive vehicles in a variety of applications including mail delivery, material handling, parking enforcement and pupil transportation, some with an all-electric range and others utilizing hybrid-electric technology.

We also completed our analysis of the emissions reductions and fuel savings associated with our efforts for the period 1991 through 2006. M.J. Bradley and Associates, a leading consulting firm specializing in this type of analysis, worked with us to develop emissions and fuel savings calculations that were based on the conventional vehicle the electric-drive vehicle was likely to replace and included factors such as the vehicle's age, EPA regulations, the vehicle's typical speed and laboratory test data in the analysis.

Overall, we have reduced CO₂ emissions by more than 3,000 tons and saved over 21,000 barrels of crude oil which translates to almost 400,000 gallons of fuel savings. The numbers demonstrate our commitment to reduce New York State's reliance on foreign oil and to provide a cleaner environment for the residents of New York State.

Below are some highlights from 2006:

- One of the earlier successes in the year was the placement of four Orion/BAE hybrid-electric buses into service on Roosevelt Island in February 2006. These bright red buses are now transporting the residents of the island into Queens and Manhattan and went into extra service duty when the Roosevelt Island tram was out of service later in the year.
- During the month of September, the Authority, in partnership with the Electric Power Research Institute ("EPRI") and DaimlerChrysler, demonstrated one of

only four Plug-in Hybrid Electric Vehicles (“PHEV”) available in the United States. There has been much media coverage of this emerging technology and there is strong support at the Federal and State level to advance PHEV technology through demonstration projects and continued research in advanced battery applications. The one month demonstration started in Battery Park City in New York City, and continued on to the State University of New York campus in Syracuse, Niagara Falls State Park, and ended at the State Capitol in Albany.

- October saw the first major airport demonstration of Electric Ground Support Equipment (“GSE”) at the LaGuardia Marine Air Terminal. We plan to expand this program in 2007 to other major New York State airports. GSE equipment can have significant emission impacts at our airports where air quality is a major concern.
- Throughout 2006, we have continued to work with local towns, parks and college campuses to integrate clean, electric-drive vehicles into their fleets. The Authority has worked with many of our customers to choose electric-drive over gas and diesel-powered vehicles.

Several other projects were completed in 2006 that are helping to clean our environment through innovative technologies that help reduce emissions from existing buses and trucks. The New York City Department of Sanitation unveiled several sanitation trucks that were retrofitted with emission reduction devices that can reduce particulate matter emissions by up to 90%. The project was funded through a partnership with the Queens Clean Air Project and NYPA. The addition of this equipment will result in cleaner air for the five boroughs in New York City.

Similar technology was used in our Clean School Bus Program which ended in June of this year. Over a period of two years, about 1,500 school buses were retrofitted with diesel oxidation catalysts and more than 3,000 buses were fueled with a cleaner diesel fuel that is now mandatory in New York State. The program helped to avoid the release of 233 tons of CO, 32 tons of particulate matter and 28 tons of hydrocarbons.

Finally, we completed two pilot projects at the Port at Howland Hook demonstrating anti-idling technology on the Port’s freight locomotive and installing emission reduction devices on two of the Port’s yard tractors. We are looking for new projects in the future to help reduce emissions at similar sites.

Looking ahead to 2007 we are awaiting the arrival of a second Plug-in Hybrid Vehicle that will be used in a three-year demonstration with the New York Times. This will be followed by several more vehicles in 2008 that will allow our customers and stakeholders around the State to have the opportunity to experience firsthand the benefits of plug-in hybrid technology.

We are also working with several utilities in a national effort to develop a prototype plug-in hybrid utility truck in partnership with EPRI, the Ford Motor Company and Eaton Corporation. We are committed to bringing this technology not only to our customers across the State but to integrate hybrid plug-in vehicles into our own fleet.

Another exciting demonstration project will begin in the fall of 2007. We have joined a national consortium of purchasers interested in the commercialization of hybrid-electric school buses. The buses will be manufactured by IC Corporation, the nation's largest school bus manufacturer, and we are joined by the New York State Energy and Research Development Authority ("NYSERDA"), the New York State Pupil Transportation Association and the New York School Bus Contractors Association in this initiative. The project will include the purchase of two hybrid-electric school buses to be used in different applications around New York State.

If you would like to see a complete description of all our programs you can visit our website at www.nypa.gov/ev.

Thank you again for your support.
