— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

**Comments:** We are seeing unprecedented climate disaster everywhere and New York will not be exempt. I'm fact, right now, a fire rages in our state because of drought. We saw a very active hurricane season this year. And now distasters are coming.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. Although New Yorkers passed the Build Public Renewables Act, NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers. I am a concerned New Yorker, raising two young kids, living in an environmentally damaged community in New York City, and I demand more from the state's leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. — Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Governor Hochul,

I am guessing you will receive many of these letters, so I won™t repeat the facts and statistics that others have said. The simple fact is that we need to build renewables- and we need to build more than what is being proposed. Much more. 15 GW is a start, but to be fully renewable it's the absolute minimum. As your constituent, I am asking you to please think beyond your own term. Think for a moment about the people who have to inherit the state that you leave behind when you leave office. We have to live here- breathe its air, drink its water.

This plan that's been proposed is completely inadequate for what this state needs. If we do not take aggressive action on this issue now, we will make New York State uninhabitable for its future residents. I am asking you to start with building at least 15 GW hours, and see what we can improve upon from there. Please- think for about the people of this state, and not just the companies. We need critical action now before it is too late.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Sincerely,
Dylan Warner
Your Constituent

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Gov. Hocul,

In the year 2020, I lost my childhood home to the CA wildfires caused by dry lightning. I grew up knowing about climate change as a looming threat, but not something that would start to seriously impact our lives until I was much older. 4 years later here we are, in a climate crisis.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. — There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Your constant refusal to actually support this city and it's residents has been glaring. My support for you has dwindled to nothing. Please actually take an opportunity to do something actually good.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Submit Date:** 11/16/2024 04:35:00 PM

**First Name:** Isabella

**Last Name:** Ballew

**Comments:** Dear Governor Hochul,

My name is Isabella Ballew, I am a Lithuanian American, and I live in New York City in Crown Heights Brooklyn. My partner studied geoscience and climatology in school so I™ve been privy to a lot of the academic discussions surrounding the effects of climate change on natural disasters and weather patterns in the United States and abroad and our current climate situation is not only worrying-it's drastically warming. I, like many others living in our polluted cities suffer from severe asthma and I™m concerned and worried at how much worse things will get as our uncharacteristically dry weather causes increasing forest fires and pollution. We don™t need to contribute to this unsustainable climate crisis with unrenewable energy. My partner also worked in solar sales and solar energy so I™m aware and frightened for what a lack of unrenewable energy and solar plans means for our already overloaded energy grid. My partner also relies on government green energy plans for his industry and job.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Although I™ve lived in NYC for the past 5 years, I™m originally from Houston, Texas, where the climate crisis has impacted the frequency and severity of the natural disasters in the region. I™m 23 years old, and in my relatively short life I™ve lived through Hurricane Harvey, the 2021 city wide freeze that caused week long power outages, and just this year, the Houston derecho which killed seven people and left 555,000 people without power over 24 hours later, and 60,000 over a week later.

Although Houston is obviously very far from New York City, the climate crisis is something we all contribute to, and which effects (and will continue to effect all of us). In September 2023, when New York City flooded and $100 million of the city was destroyed, I couldn™t help but flashback to the floods I™d experienced in Houston. Just like in Houston, only afterwards did the city realize how unprepared it was for a storm of this caliber. Only afterwards, the state (Kathy Hochul), city (Eric Adams), and federal government (Joe Biden) scrambled to repair the damages. We can only expect these instances to increase in quantity and severity as the climate crisis worsens, and we will not be prepared. Instead of scrambling to pick up the pieces after the damage has been done, homes have been destroyed, and lives have been lost, we must prevent these events from happening in the first place by creating a more sustainable climate and economy. New York can become an example for the rest of the country and the world that a better future is possible.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Eliza

**Last Name:** Ducnuigeen

**Comments:** My name is Eliza and I'm a resident of Hamilton Heights in New York City. The climate crisis is spreading in my community. NYC's wildly dry fall, and brush fires in both Upper Manhattan and New Jersey, have worsened our air quality--and these unusual and rapidly-changing weather patterns are the result of carbon pollution, caused by our ongoing reliance on fossil fuels.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. — While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Comments:** I cosign the basic text/requests below, but also want to say how personally important this is to me and all I love. I just returned from Colombia, where BogotÃ¡ is in the middle of water rationing, and you can see how the lack of rain has scarred the mountains that form the edge of the city with orange gashes composed of dead trees. Coming back, I never expected to land a drought here, with wildfires in Central Park and Inwood Hill Park, and the potential for water shortages in NYC. Australia, other countries or regions educate on and expect water conservation practices from their residents, but in the US, how will we manage this? Will there be revolt in response to mandated water turnoffs, or will the government ever even feel able to take such measures? Why can't we just work harder to resolve what we know to be the cause of these issues, treat the cause not the symptoms? I was already devastated by the wildfires in Ontario, where I'm from, a year or two ago, but this is too much. Water issues and so much death of the living beings I love (I love trees and vegetation, they are persons to me, and I mourn them as I would a loved one) the result of burning fossil fuels. If we cannot do much about this federally in the next four years (tragically), we can do something about it more locally by aggressively pursuing the energy transition we need, and transforming the whole system of energy provision in the process. And I don't even see how this proposal is that radical. It's [public or cooperative power] been a proposition and interest amongst Democrats since the early days of the country's energy systems. We've already banned fracking here. Take the next step and do something positive, moving beyond the restrictive, to save and enrich lives. Please.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. — Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Girl! Let's do the right thing! As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** A moment of your time is very much appreciated. We now face unprecedented hurricanes and climate devastation across the globe. New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem New Yorkers passed the Build Public Renewables Act which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable. It proposes to build only 3.5 GW " nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

New York has always been a future-facing & forward thinking city of innovation. The New York World's fair alone has inspired worldwide what could be possible with technology. It's time again that New York lead this new Solar Punk movement. The advent of state of the art technologies such as micro-inverters alone could super charge this city even more with renewable technologies creating thousands of sustainable professions. That is if our leaders will seize this moment to act.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Let us forge a greater path for this amazing state and inspire the world even more.

Thank you for your time.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Govenor Hochul,
I know you are as devasted as I am with the recent election results. As a mother of two school aged daughters, I worry constantly about the future we are leaving them. As we face unprecedented hurricanes and climate devastation across the globe, I worry that New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.  We can be a beacon of hope in our nation and build a better future while also building good paying jobs. This is a win win.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you so much for your immediate attention to this urgent matter

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Samantha

**Last Name:** Brown

**Comments:** My name is Samantha Brown. I was born and raised on the Tug Hill in Northern Oneida county, In a region known for its beautiful landscapes, agriculture, and year-round, outdoor activities. I™ve moved around the state throughout the years working as a healthcare professional, and I write to you now as someone concerned for the future of our state and our world when it comes to preserving our environment, as well as maintaining the health of our people.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

I am beyond proud to be a lifetime resident of New York State. Having lived in four different counties in four vastly different regions in a state that boasts some of the very best in everything from technology to business to agriculture, I have seen a state full of people who are resilient and strong and deserve a brighter cleaner future. New York leads the nation in innovation time and time again. Clean energy, and the promise of a climate stable enough for generations to come has to be the next priority for our state government.

Thank you for your time and consideration in this matter. We may not live to see the outcome of our actions, either positive or negative, but we have an opportunity now to set up a future for our children, and all generations after, to have a safer, cleaner world to live in.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

I'm going to add to the generic message posted above as well. It's ridiculous that we are even still reliant on these fossil fuels given the supposed progressive nature of New York and especially New York City. This is a disgrace. Lobbyists have completely captured your administration and the slow walk of this legislation is a disgrace. Get it together. Do better. Build the 30 GW you are legally required to build. Be a real advocate for New Yorkers for once.

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am a 30 year old woman who is very concerned about the climate crisis. The action, or lack thereof, that our country takes to combat this crisis will affect my decision whether or not to have children in coming years. The burden weighs heavily on me. I worry about what kind of world our children will inherit. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

**First Name:** Kassie

**Last Name:** Osburn

**Comments:** As we witness the growing impact of hurricanes and climate devastation around the world, it's clear that New York State is falling short in meeting the climate goals set by the Climate Leadership and Community Protection Act (CLCPA) of 2019. In response to this urgent challenge, New Yorkers voted for the Build Public Renewables Act, empowering the New York Power Authority (NYPA) to build enough renewable energy infrastructure to help us reach the ambitious CLCPA targets: 70% renewable electricity by 2030 and 100% by 2040.

However, NYPA's current draft strategic plan for renewable energy is simply not enough. It proposes building only 3.5 GW of renewable energy, far below what is needed to meet these critical targets. And, according to NYPA's own analysis, there is a real possibility that most of these projects may never be completed.

To stay on track with the CLCPA's vision, NYPA must lead by example, committing to the construction of at least 15 GW of renewable energy by 2030. This is the call of the NY State AFL-CIO, the Building Trades Council, and thousands of concerned New Yorkers who have made their voices heard by sending letters to NYPA leadership, urging swift and decisive action.

But it's not just about increasing capacity. The current plan falls short in several key areas that could have profound impacts on our communities:

- **Geographic Distribution:** There are very few projects planned for the Hudson Valley and downstate New York, regions where electricity demand is the highest. Communities in these areas need to be part of the transition to a clean energy future, benefiting from reduced pollution, new green jobs, and lower utility bills through programs like REACH.

- **Peaker Plant Phaseout:** The draft plan lacks a detailed strategy to shut down NYPA's polluting peaker plants by 2030, as required by law. These plants have a devastating effect on public health, particularly in communities already burdened by pollution from other sources. It's critical that NYPA begins to phase out these plants and invest in cleaner alternatives.

- **Public Land Usage:** Less than 6% of the proposed renewable capacity is planned for public land or institutions. Public assets like SUNY and CUNY campuses, schools, and other state-run facilities could be key partners in this transition. By harnessing public land for renewable energy projects, we could reduce emissions, create jobs, and help meet our climate goals more effectively.

- **Labor Inclusion:** The draft plan does not adequately reflect the input from important labor organizations, such as the AFL-CIO, the Building Trades Council, and IBEW, whose members are directly impacted by the energy transition. These organizations are calling for a larger buildout of renewable energy capacity to ensure that New Yorkers have access to stable, long-term green jobs.

- **Economic Development Priorities:** NYPA's financial analysis in the draft plan fails to address the significant energy subsidies currently provided to multinational corporations like Citibank, Amazon, and Lockheed Martin. Redirecting some of these resources toward renewable energy projects would help lower costs for everyday New Yorkers while also advancing our climate goals.

- **Community Involvement and Transparency:** While the draft plan mentions partnerships with communities for distributed energy resources, there are no clear timelines or specifics. Communities should not have to wait for another year to begin seeing the benefits of distributed energy projects. In addition, the lack of information about specific projects and their costs makes it difficult for New Yorkers to fully engage with and provide meaningful feedback on the plan.

- **Public Hearing Access:** The draft plan does not provide enough opportunities for public input. Notably, Central New York, the North Country, and many boroughs of New York City are excluded from the hearing process. Every region of the state must have a voice in shaping our energy future.

To address these issues and make sure New York is on track to meet its climate goals, I urge you to make the following revisions:

- **Increase the total planned renewable capacity** to at least 15 GW, as recommended by key labor organizations and community advocates.
- **Include a detailed plan to phase out peaker plants** by 2030, prioritizing public health and environmental justice.
- **Plan for at least 5 GW of renewable capacity** in the Hudson Valley and downstate New York, with a strong focus on distributed energy resources.
- **Decarbonize our public schools** by installing renewable energy systems on SUNY and CUNY campuses, ensuring that these institutions can meet their energy needs sustainably.
- **Build a pipeline of green union jobs** by committing to projects that create long-term, stable employment for New Yorkers.
- **Redirect economic development funds** from corporate subsidies toward renewable energy development and energy affordability for residents.
- **Ensure greater public participation** by adding hearings in Central New York, the North Country, and additional boroughs of New York City.

We have a rare and crucial opportunity to shape New York's energy future in a way that benefits all of us”our communities, our workers, and our environment. Let's rise to this moment and make sure that our future is powered by clean, affordable, and publicly owned renewable energy.

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Gov. Hochul,

The incoming presidential administration is poised to set national energy policy back 70 years, but New York can set a different course. We have the opportunity to create jobs, reduce power bills, and make our power grid safer and more resilient by embracing the goals of the Climate Leadership and Community Protection Act of 2019 as directed by the Build Public Renewables Act. This calls for the New York Power Authority to build public renewables sufficient to meet CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Yet NYPA's draft strategic plan for renewables proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the recommendations of the NY State AFL-CIO and Building Trades Council, and as demanded by thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**
Hello, I hope this letter finds you well!

I am a registered nurse from Brooklyn, who deeply cares about the environment. As a person who also has chronic asthma for over 2 decades and seasonal allergies her whole life, I have not only seen how climate change has negatively impacted the world and this state, but myself and my patients. The air quality has decreased significantly, decreasing our quality of life, Moreover, the threat of terrible environmental disasters that are much worse than we™ve seen before are real threats that we see now, including unprecedented hurricanes and climate devastation across the globe. I firmly believe that New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019, and urging you to make changes to address these shortcomings.

Although New Yorkers passed the Build Public Renewables Act to solve this problem, it is nowhere near the capacity needed to meet CLCPA goals. The CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040, yet the draft strategic plan only proposes to build only 3.5 GW by 2030 rather than the needed 15 GW to meet this goal. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

By complying with the law and build complying with CLCPA in addition to the other revisions mentioned, I hope we can match the climate goals and help decrease the already quickening issues caused by climate change, and help all of us so we and the future generations can live and thrive in a healthier, safer environment.

Thank you for your time reading my letter, and I hope this inspires you to reconsider the current goals of the Build Public Renewables Act and to improve upon it.

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I'm submitting a public comment to urge you to comply with the Build Public Renewables act.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of

these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

**Comments:** Hello, my name is Hannah, I live in Queens and as a young person I am very concerned about the climate crisis and how it will affect myself and future generations. We are already seeing catastrophic events like natural disasters, lack of clean water, animal extinction, rise in water levels, etc. Renewable energy is extremely crucial to the health and safety of New Yorkers, now and in future generations to come. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
