— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Our state must be a national leader in advancing renewable energy and building more public renewables is an important step for us to take!

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** Governor Hochul and Mr. Driscoll,

Divest from FOSSIL FUELS. Fracking is going to become a mute point in the future. National Grid continues to build or try to build fracked gas infrastructure in NYS that is going to become totally useless in the future, on the bankroll of the ratepayers in NYS. We want publically-owned utilities and private companies out of our power system.

By 2030 you should:

Meet Climate Leadership and Community Protection Act goals, New York Power Authority should lead the way and build at least 15 Gigawatts of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from DECARBONIZATION through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. SOME OF THESE DISCOUNTS SHOULD BE REDIRECTED TO CAPITALIZE RENEWABEL ENERGY PROJECTS OR REDUCE NEW YORKERS' SKROCKETING ENERGY BILLS. (DO THIS!)

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

**Comments:** This weekend we awoke to choking air from a fire in Prospect Park. This is not the first time climate change has come to Brooklyn and it won™t be the last.
We need NYPA to build 15 GW to meet our climate goals“enough to power 12 million households. When we build 15 GW we will create 25,000 green union jobs, ensure super polluting peaker plants are retired by 2030, and lower utility bills for the New Yorkers who need it the most.

As we face unprecedented hurricanes and climate devastation across the globe, and the Trump admin fails to address this dire problem,  New York State needs to lead.  And, NY has a legal mandate in the Climate Leadership and Community Protection Act of 2019. Further, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe exacerbated by our increasing energy needs, & wars around the world, New York State is falling far behind on our climate goals mandated by the desire for food, water, air & good soil in New York State, the planet, the Climate Leadership and mandated by Community Protection Act of 2019. To solve this problem, New Yorkers has done well by already passing the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built. New Yorkers mandated this and now it must happen. It's life or death. We have fires on our land. This is urgent. You™ve waited and now there are fires. You™re too slow. Get help. Make partnerships, follow other models. Follow the plan set forth. If there are problems get help from us. We can help you. We will see this through together. This cascade of change is happening and it can™t skip New York State. This lack of effort will be catastrophic. 15 GW is just a start.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for

the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Comments:** Hello Gov Hochul,
As i write this letter, at my apartment on Manhattans upper west side, my eyes are red and stinging from the smoke coming from the New Jersey bushfires. I have advanced glaucoma and the fires make it worse. I can only think that we are now at the beginning of an era of climate induced disasters, as predicted for decades.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** We live on a finite planet, yet we treat our energy use as if these things are unlimited. This rationale is that of a cancer cell, and we have overwhelming evidence that we cannot continue on our current trajectory. The climate crisis is impacting our communities NOW. We need to take whatever action we can to localize and democratize our resources in order to build a resilient community. Publicly owned energy is an essential step to move New Yorkers towards a better future for all.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **First Name:** Matthew

**Last Name:** Parker

**Comments:** I'm writing about the New York Power Authority Renewables Strategic Plan (8 Oct. 2024 Public Comment draft).  NYPA's draft strategic plan for renewables is not

acceptable because it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet the goal of 70% renewable electricity generation by 2030 established in the 2019 Climate Leadership & Community Protection Act (CLCPA).  Moreover, by NYPA's own admission, it is likely that many of the 40 projects listed in the NYPA Renewables Strategic plan will never get built.

NYPA's Renewables Strategic Plan states on p. 54 that currently operating and contracted projects will only permit New York to reach 44% renewable generation by 2030. Thus, this NYPA Renewables Strategic Plan falls vastly short of an action plan for attaining the CLCPA legal mandate for 70% renewable generation by 2030.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The NYPA currently provides massive energy discounts to some large customers that are flush with money, including such multinational corporations as Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects (or to reduce New Yorkers™ skyrocketing energy bills).

There is also insufficient information about 40 proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

Sincerely,
Matthew Parker, Johnson City NY

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects.

Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I'm writing about the New York Power Authority Renewables Strategic Plan (8 Oct. 2024 Public Comment draft). NYPA's draft strategic plan for renewables is not acceptable because it proposes to build only 3.5 GW " nowhere near the capacity needed to meet the goal of 70% renewable electricity generation by 2030 established in the 2019 Climate Leadership & Community Protection Act (CLCPA). Moreover, by NYPA's own admission, it is likely that many of the 40 projects listed in the NYPA Renewables Strategic plan will never get built.

NYPA's Renewables Strategic Plan states on p. 54 that currently operating and contracted projects will only permit New York to reach 44% renewable generation by 2030. Thus, this NYPA Renewables Strategic Plan falls vastly short of an action plan for attaining the CLCPA legal mandate for 70% renewable generation by 2030.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The NYPA currently provides massive energy discounts to some large customers that are flush with money, including such multinational corporations as Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects (or to reduce New Yorkers™ skyrocketing energy bills).

There is also insufficient information about 40 proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

Sincerely,
Matthew Parker, Johnson City NY

**Comments:** _____

_____

NYPA has done a great job doing things private developers can't do -- like building and managing large hydro.  NYPA's proper role now would be to site and build new nuclear -- a sector where there would be no private competition and where state renewable subsidies do not encourage private developers to go.

NYPA's time/energy/dollars would be wasted competing with private developers for renewable projects.  As NYSERDA's report indicates, we would need to be installing solar/wind at 4-5 times the current pace to meet 70-by-30 or 100-by-40 targets. Instead, according to NYISO, we are compromising grid reliability and according to Comptroller, hiking rates on utilities with a million rate-payers already in arrears. The Business Council and Comptroller Audit tell us we should reassess the timelines, buildout, and targets in the CLCPA and scoping plan.

I am a taxpayer of NYS and member of Protect Our Coast – LINY and am appalled at the lack of checks and balances of the Climate Action Council (CAC) by the mandates in the Climate Leadership Community Protection Act (CLCPA) bill of 2019.

Protect Our Coast – LINY hired an engineer to produce a Cost Benefit Analysis (CBA) to show the true costs of offshore wind mandates to NYS ratepayers.

The CBA came on the heels of Governor Hochul and NYSERDA allowing Equinor, to rebid their Empire Wind 1 project at a higher strike price, dismissing the vote against rate increases by the Public Service Commission (PSC). PSC, NYS ratepayers, businesses and elected officials opposed this increase – the mentality of “the state will do what the state wants” has to stop now.

The CLCPA is financially inequitable to all NYS ratepayers. The CBA proves that costs will triple what current ratepayers are currently paying for electricity.

Governor Kathy Hochul’s own Budget Director Blake G. Washington admitted during a budget discussion that she is “uneasy” with how much it’ll cost to implement NY’s mandate climate goals. He also stated that taxes will be needed to reach their targets and that should be a clear sign to everyone that New York State needs to go back to drawing board on this issue. The rush to mandates involved in the state’s overly ambitious rush to end fuel choice for NYS residents are too costly, cost too many jobs and are too rushed to make sense.

The NYS Comptroller audited NYSERDA and the PSC on their egregious goals of zero emissions regardless of costs to all NYS ratepayers. DiNapoli’s audit of July 2024 stated “Improved Planning Needed for New York To Achieve Its Clean Energy Goals.” The audit found inadequate planning, monitoring and assessment of risks and challenges in the PSC’s efforts to help the state meet the Climate Act targets, which seek 70% renewably sourced electricity by 2030 and net-zero emissions by 2040.

The Business Council, engineers, tax-payers, and rate-payers alike have grave concerns on the state’s 2030, 2040, and 2050 decarbonization targets. A recent Business Council letter to Governor Hochul – with sixty co-signers including dozens of unions and chambers of commerce – amplifies these concerns with the plan’s cost and reliability. As reported by NYS energy

research and development authority (NYSERDA) on the 15-E-0302 CES docket: The amounts of Tier 1 (solar and wind) project deployment that would be needed in order to achieve the 70% goal in 2030 may far exceed what the renewables industry could be expected to develop in this timeframe.

The Public Service Commission (PSC) echoes these concerns with progress in meeting goals in the state plan. The grid operator, NYISO, indicates that the downstate region faces a narrowing capacity margin over the next decade, even in normal weather, with the possibility of a significant shortfall as early as next summer. This is where we are after Albany voided home rule and environmental protection across the state; after Albany changed the assessment model robbing small communities of fair taxes on industrial buildout, after Albany gave developers eminent domain authority to take private land to run the hundreds – perhaps thousands – of miles

of transmission needed for solar and wind buildout.

To date, no robust engineering analysis suggests the plan will work. There has been no rigorous fiscal analysis. Instead, evidence seems to indicate that the state's planned installations of solar, wind, battery, and transmission will not reliably power the grid and will not prove affordable. Onshore wind and solar contracts cancelled last year were rebid at higher costs and subsequently approved by the PSC. Energy prices from offshore projects will be double or triple current wholesale electricity costs in the metro region, and that's before any transmission or storage has been built.

Currently, about one in eight residential customers are in arrears—more than 1.2 million statewide -- with $1.8 billion owed to utility companies across New York. How spiking energy prices will impact these citizens and others currently struggling to pay bills should be no mystery. Politico reported, upstate NY electric customers are already paying 10 percent of their

utility bill to support the state's effort to move off fossil fuels and into renewable energy. In the

coming years, people across the state can expect to give up even bigger chunks of their income to

the programs — $48 billion in projects is set to be funded by consumers over the next two

decades.

Worth noting, in this critical context, is the Vineyard Wind offshore debacle, one single turbine

blade wreaked havoc off the coast of Nantucket, closing down beaches, and directly impacting marine life, fishing, and local businesses. How this threat, and future offshore wind catastrophes will impact shore communities, wildlife, and commercial fishing is not known. New Yorkers should realize that is a mistake, at this point, to plan how to build – let alone pay for -- 55 gigawatts of solar, 10 gigawatts of onshore and 17 gigawatts of offshore wind, along with batteries a hundred times the size of the world's largest battery, and new transmission to tie all this to the existing grid. Instead, we might better ask, first: Who thought it was possible?

Second: From empirical examples of places with significant intermittent deployment, California, and Germany: Why did anyone think this would enable New York to cut fossil-fuel use and reliably affordably power the grid?

Why is NYSERDA imposing unattainable, not affordable mandates on ratepayers of New York, because bureaucrats in Albany said so? Isn't it better to allocate taxpayer funds to something more beneficial for all New Yorkers?

I demand NYS abandon the scoping plan and CLCPA in favor of a plan grounded in science and engineering. A plan that does not discriminate against safe, energy dense cost-effective carbon free baseload nuclear power. We can save our seashores, forests and farms but only if we

abandon the plan Albany is currently pursuing with self imposed mandates what will have zero

affect on global warming.

--

Thank you for the opportunity to provide comment.

Michelle Quinn

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Our power company here is Central Hudson. Central Hudson is facing a multi-million-dollar settlement because of their repeated overbilling of our community members. My household has been overbilled by Central Hudson. Only once was the overcharge so noticeable that we disputed it; the rest of the time, we have paid the bills as written. Since Central Hudson switched to metered billing, our bills have been consistently lower than they were before the meters were installed.

There is a lot of love for the environment in the Hudson Valley. People want to live here and raise their families, but gainful employment is hard to find in the area. I look forward to the creation of green union jobs in New York State. I am here to show my support for PUBLIC POWER. The environmental and socio-economic impact of this shift has the potential to positively impact this region for generations to come.
As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

**Last Name:** Samu

**Comments:** Last week we had temperatures of nearly 80 degrees in November, and Donald Trump was elected president. We need to do everything we can at the state level to protect the climate because it's not going to happen at the national level.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040.

But NYPA's draft strategic plan for renewables proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built. This is unacceptable.

NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership. This will bring us closer to meeting CLCPA goals,

To address the shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

This is not something that can wait until later. We need to get this moving now. You have the power to put this into action.

Respectfully,
Margaret Samu

**Last Name:** Graves

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

**Comments:** I have lived in New York for eight years, and in that time, my average energy bill has tripled!
There has been wildfire smoke, flooding and now a drought.

It's your job as our elected official to take care of us. Build Public Renewables!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects.

Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Sofia

**Last Name:** Demopolos

**Comments:** My name is Sofia Demopolos. I live in North Brooklyn and I am deeply concerned about New York failing to take adequate steps to address climate change and serve working people. I work a service job, my rent is already expensive, and on top of it, my utility bills for electricity and gas spike during the winter and summer months, especially as weather patterns get more extreme. As a working class person, it sometimes feels like my voice does not matter. But if we all speak at once, you have to hear us when we implore you to comply with the Build Public Renewables Act.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Re; ORES 23-00033 Rock district Solar- Cypress Creek/Greenbacker
.
We live in an embattled community that is fighting: not only a State authority funding the work [NYSERDA], another State agency permitting the work [ORES], and a well-funded private developer, Cypress Creek/ Greenbacker, an out-ot-state owner. And now we have to contend with yet another State Authority [NYPA] that could "plan, design, develop, finance, construct, own, operate, maintain and improve renewable energy generation projects."
So far many of these projects have not improved any of the communities currently, nor has any of the solar energy available to its citizens.
A clear example is the solar projects similar to our proposed project currently in place and/or under construction in Sharon springs, NY! Small communities are not equipped or capable of defending themselves from this government overreach. They should not have to have these battles!

Schoharie County Citizens Against Solar Aasalt -CASA

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **First Name:** Alexander

**Last Name:** Slizeski

**Comments:** Hello,

My name is Alexander Slizeski and I live in Ridgewood, Queens. I am deeply concerned about an appropriate response being made to address the global climate crisis as it begins to affect New York. Just this past week I could smell smoke in the air from the unprecedented brush fires burning in Prospect Park in neighboring Brooklyn.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build

enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

**Comments:** As a resident of a community that is literally on the shoreline of devastating climate impacts, East Hampton, New York, I know that my community is doomed unless we act swiftly to vastly increase our use of clean renewable energy. The cost will be in property, lives, and our children's future if we do not act boldly now. Given that we can expect only obstruction from a Trump administration, New York State must step up to the plate to build the capacity to meet CLCPA goals. Please provide the leadership we desperately need in order to survive.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. — The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Gov. Hochul and Mr. Driscoll,

We are already feeling the effects of climate change in the Hudson Valley, where I live. One very small example: I recently asked at a nursery about buying a Blue Spruce for our yard, and was advised that I should pick a different tree because it's getting too warm for them. Of course, the worse effects of climate change are so much more severe for people living on the ocean shore (including Long Island where I used to live) or in communities that are beginning to experience dangerous heat in the summer.

Here in the Hudson Valley we have also had to deal with a private energy provider that for months could not figure out how to bill its customers. Local contractors and other businesses would go out of business if they couldn't figure out how to bill their customers, but Central Hudson is still our expensive power provider.

I want to urge you to build lots and lots of public renewable electricity.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I love living in NYC, but I'm scared that“due to climate change“this magnificent city is going to be underwater sooner than we thought. And just look around now... our parks are on fire. While no one person can fix this crisis on their own, you have an outsized amount of power to DO SOMETHING to slow and mitigate these catastrophes, and the ones that are coming: INVEST IN RENEWABLES.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

THANK YOU!

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**
New York State Democrats have no excuse for not taking the bold action that we need to fight the climate change. You have power, so use it.

The State has passed the Public Renewables Act. Now take the next step. We need 15 gigawatts of new, publicly owned renewables by 2030. That's 25,000 green union jobs, the end of "peaker" plants polluting black and brown neighborhoods, and the kind of leadership that will carry this whole country's climate forward.

New York can lead the way on climate. But only if our leaders actually lead. Learn the hard lesson of the national democratic party--people WANT bold ideas and strong leadership. You have the power--use it!
Sara Eckel

**Comments:** Dear Mr. Driscoll,
I don't have to tell you about what fossil fuel is doing to our environment. Here in NYC people have drowned in their apartments and we now have wild fires in Prospect Park, Van Cortlandt Park, and Inwood Park. And since no rain is predicted, there will certainly be more. What will it take to get the NYPA to act on fixing this?

We need clean renewable energy. Offshore wind provides the most clean, reliable energy and it has been stalled for years. We need clean, proven wind and solar development, not dirty false solutions like nuclear, hydrogen, carbon capture, RNG, or Canadian megadam hydro.

We need public power because corporate utilities don't work for the people depending on them. In 2020, my building switched from our old steam heat system to air source heat pumps. Our electric bills went through the roof. The PSC continues to approve rate hikes to build more fossil fuel infrastructure. The system is corrupt.

We rely on our public agencies like NYPA to act in the interest of the people, not billionaire corporations. Please move quickly on public power, getting large scale offshore wind up and running, and distributing clean renewable energy. Our lives depend on it.

**Comments:** I am deeply concerned about global warming, and with the election of Donald Trump action at the state level becomes critical if we're to have any chance of averting the worse consequences of climate change.

As we face water shortages and fires (even in Brooklyn's Prospect Park), New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am deeply concerned that, under your leadership, New York is falling far behind on the climate goals mandated by the Climate Leadership and Community Protection Act of 2019. The New York Power Authority's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW. This is nowhere near the capacity needed to meet CLCPA goals, and these projects may never even be built.

I lived through Superstorm Sandy in 2013 and saw the devastation New York suffered, which is still not fully repaired. This kind of climate disaster must not become a regular part of life here; it is not sustainable, and our highest priority as a state must be avoiding that outcome. It is vital that NYPA plan to build at least 15 GW of renewable energy by 2030, as civic and labor groups are demanding.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Comments:** As an 82 year old great grandmother of 2 year old twins, I remember the past and have a keen interest in the future. We in NY have a responsibility to do the most we can to safeguard the climate. The legislature has passed a bill calling for 15 gigawatts of public, renewable, power by 2030. That gives us 5 years, which is just barely enough to get things built. You need to get this incorporated into the budget so the ball can get rolling. Please make NY an example of climate responsibility for the nation. Thank you.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Greetings,

I am a taxpayer, voter, and public servant in New York City. For 3-4 days a week, I am not in my tiny one-bedroom apartment”during which time I turn off the heat/air conditioning and all appliances (except the refrigerator)”yet my monthly electricity does not drop below approx $150. In the winter, ConEd bills me almost $400 a month! This abuse of monopoly robs me of an unacceptably high proportion of my discretionary income because of which I am struggling to save and invest money toward my retirement.

Separately, the pollution from fossil fuels in NYC is weakening my immunity causing me to fall sick more frequently and acutely, which hurts my career and the economy.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

I applaud NYPA for taking on the required mandates to expand its capacity to invest in more power projects. The workforce training and energy cost relief to low income households is also very positive. As someone who has been involved in climate activism for many years I have seen the can kicked down the road when it comes to not meeting our goals. It is a concern that we will not meet the 70% renewable electricity goal within our CLCPA, 2019 law by 2030. This goal is more important with every super storm, raging fire and life threatening drought.

To add to this we have new demands on our grid with cryptocurrency and data centers popping up in NYS. Each one of these new centers should be responsible for a renewable energy source at their expense. We are fortunate to have clean and relatively cheap energy here in WNY to lure industry and grow our economy. However, let's not be shortsighted about who we want here and what would benefit our community the most.

In addition, I would suggest that there is far better promotion of the NYSERDA Build-Ready program. When our Sierra Club Niagara Group does educational presentations it is shocking how many people and businesses are clueless about the opportunities to live more efficiently, cleaner, safer and with a positive cost/benefit for their investments.

We must cover every brownfield, landfill, Thruway adjacent land, government buildings and more with efficient solar installations. We can tap currents with turbines and add more wind to the mix. We are leaving money on the table and are already behind schedule to meet our clean energy goals. Let's be the model for the rest of the country and heroes to our grandchildren. No excuses, no delays..

Very Sincerely and with Gratitude,

Sara Schultz

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. — While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Last Name:** Sacerdote

**Comments:** Hello, my name is Marysa Sacerdote and I live in Kingston, New York.

Our power company here is Central Hudson. Central Hudson is currently facing a multi-million-dollar settlement because of their repeated overbilling of our community members. My household has personally been over-billed by Central Hudson. Only once was the overcharge so noticeable that we disputed it; while the rest of the time, we paid all the bills as written. Since Central

Hudson switched over to metered billing, our bills have been consistently lower than they were before the meters were installed.

There is a lot of love for the environment in the Hudson Valley. People want to live here and raise their families, but gainful employment is hard to find in the area. I look forward to the creation of green union jobs in the Hudson Valley and in New York State.

I am writing to show my support for public renewable energy in NY. The environmental and socio-economic impact of this shift has the potential to positively impact this region for generations to come.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. **Comments:** I am a Local 3 IBEW electrician, we are leading the charge in NY's green infrastructure plan. Many of my brothers and sisters are out of a job, a comprehensive multi decade plan such as this could bring a huge and meaningful change in the lives of many working families. Not just the people doing the work, but the citizens who live in this city who deal with pollution that shortens our life spans and enjoyment of our lives. We deserve a greener NY.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. **Comments:** Fighting the outcome of global warming is a top priority with me and my family. It's truly disheartening to see governments accepting failure and stepping back from their responsibility. Climate impacts are an issue of supreme security. The security of our lives, our health and our economic well being. I cannot stress this enough. We need to keep to the targets we've set because truthfully they are already inadequate!!!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** We're in a climate crisis caused by decades of lies, greed, inaction and pandering to the fossil fuel industry.  With the horror of the election results, this could get much worse.  We need to do everything possible on a state level to mitigate the damage from this crisis.  Please, do the right thing.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** The impacts of climate change and pollution are already visible in our day to day life, and directly risking our and our loved ones lives and health. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership. The need for this has already been shown, all we need is the follow through. Nothing can be more important than this, the recent natural disasters have already shown us this, and it's only going to get worse.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

**First Name:** Alex

**Last Name:** Crandall

**Comments:** Hello -

My name is Alex Crandall. I've been a resident of New York state for ALL 30 years of my life. I've lived all over this state and have been very proud to do so. However, living here I see how this state has changed. Now as we surely hurdle towards a climate we cannot come back from, we must do better and be the example. I've seen the devastation wrought by the torrential rains and flooding that have become commonplace. I was close enough to the Prospect Park fire last week to taste the smoke and feel the ash in my home. We must be the leader here and do right by the citizens of this state, this country and this planet.

So you will understand when I say I find it is truly laughable that New York aims to be one of the most progressive states in the union and yet we have this plan. You will also understand why I DEMAND that we scope and accomplish the full 15GW as outlined in the original plan in the next 6 years. Not only will the full plan make lives better for all New Yorkers, support the state economy, create jobs, and ensure that New York can be around for years to come.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

ALSO DONT YOU DARE GET RID OF CONGESTION PRICING AGAIN

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

**Last Name:** Prabhu

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Thank you for your time and all that you do for New Yorkers have reliable energy, and access to clean air and water. I feel very concerned about the climate crisis and the impacts it will have on my family and neighbors. We are facing unprecedented events, from Wildfires raging in Prospect Park affecting the air quality, an unprecedented

drought that is affecting water access, and unprecedented temperature anomalies that see temperatures as high as 80 degrees in November. As a State, we must do more to transition away from fossil fuels, the leading cause of climate pollution and climate change.

As we face climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. — There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you for your time and for your efforts to make New York State a leader in the decarbonization movement.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership. As a Public School teacher and proud Union member, I stand in solidarity with these unions and groups.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** It has been terrifying to watch as year by year the climate impacts our community more and more while our representatives seem to move with little to no urgency on this issue. Watching Prospect Park catch on fire and my neighbors deal with flooded homes is uncceptable. We need strong action immediately. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

As a young voter who works in the community solar space, we need public renewables more than ever. Community solar in New York is declining and we are still nowhere near our goal of 100% renewables by 2030. We need a strong government and public renewables to achieve both of these goals.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** If NYPA builds 15 Gigawatts of public renewables by 2030, it means New York will:

Create 25,000 union jobs, lower electric bills, and slash pollution.
Get New York back on track for the nation-leading climate goals we™ll otherwise miss.
Become a climate model so powerful, not even Trump can stop it.

I'm 75 so I won't be seeing much of the future changes but I'd sure like to leave this planet knowing that future generations will be in good hands, the hands of a state and nation of people who care about the environment and the humans, animals and flora we so need to share our lives with and enjoy.

Please do not back out of the important step for the energy future of NY.
Thank you for your consideration.
