— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** We are in a climate catastrophe. I know you know this but are reluctant to really do anything about it because you are beholden to your donors.  If the Dems loss in the last election didn't wake you up then I guess nothing will.  But if you'd like to do the right thing and not go down in history as the worst governor of NY in a generation (similar to the way Joe Biden is going to be looked at in the eyes of history -- if you guys would ever just get get out of your BUBBLE and LOOK) then please BUILD 15 GIGAWATS OF PUBLIC RENEWABLES BY 2030. Stop listening to just each other in your little bubble and start listening to the PEOPLE!!

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Charlotte

**Last Name:** Thompson

**Comments:** Hello,

My name is Charlotte and I have lived in Greenpoint, Brooklyn my whole life. I grew up just a couple blocks away from the Newtown Creek, a superfund site. I am disabled by chronic illness, due in some part to environmental factors, which is one of many reasons why I am deeply invested in making sure that New York transitions swiftly to clean energy.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you,
Charlotte Thompson

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

To Whom It May Concern,

Thank you for soliciting public comment on the NYPA Renewables Draft Strategic Plan. I am an independent writer and researcher on the electric power sector and on public power in particular. I would like to raise three points in this comment.

First, the portfolio of 3.5 GW of potential projects is a surprising achievement. Public servants at NYPA should be commended for the incredible progress they've made carrying out their new expanded authority to build renewables, especially given the fact they started from scratch entering this already-mature field. Moreover, the Draft Strategic Plan is filled with critical information on financial and legal concerns that would benefit public power authorities across the nation.

Second, to advance its Strategic Plan while also making a massive contribution to decarbonizing New York City's power, NYPA should investigate taking over the Clean Path NY transmission project whose contract with the state was recently cancelled [1]. Since NYPA was already a minority partner in the project; since the constituent wind and solar projects already have permits and/or steel in the ground; since some of those projects may already be part of NYPA's current portfolio; since NYPA has decades of expertise designing, building, and operating transmission lines; and since, critically, the viability of the project always depended on NYPA's Blenheim-Gilboa pumped hydro storage facility, NYPA would be the natural entity to see it through as part of state energy needs.

To take over Clean Path NY, NYPA would surely need to directly enter into a Tier 4 REC contract with NYSERDA, rather than merely bidding on such a contract against other competitors in some prospective new auction process. Directly contracting with NYSERDA is exactly the key capability that NYPA identified in its September comments on the biennial review of the state's Clean Energy Standard [2].

Notably, it would not be the first time NYPA stepped in to take over, complete, own, and operate a power project that was essential to the state's energy system. In 1975 NYPA acquired from Con Edison, with assistance from the legislature, the partially built Unit 3 of the Indian Point nuclear power plant outside New York City and operated it until its sale in 2000 [3].

Third, as revealed in the state's recent Future Energy Economy Summit [4], advanced nuclear will prove essential for the reliability and decarbonization of the state's power system. Though the expanded authority does not include it, NYPA should seek to partner with other entities on advanced nuclear. Particular partners could include fellow public power authorities Ontario Power Generation and the Tennessee Valley Authority, the former being NYPA's partner in the original hydropower project, on their small modular reactor collaboration [5].

Sincerely,
Fred Stafford

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for

the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

**Comments:** _____

_____

To Whom It May Concern,

Thank you for soliciting public comment on the NYPA Renewables Draft Strategic Plan. I would like to raise three points in this comment.

First, the portfolio of 3.5 GW of potential projects is a surprising achievement. Public servants at NYPA should be commended for the incredible progress they've made carrying out their new expanded authority to build renewables, especially given the fact they started from scratch entering this already-mature field. Moreover, the Draft Strategic Plan is filled with critical information on financial and legal concerns that would benefit public power authorities across the nation.

Second, to advance its Strategic Plan while also making a massive contribution to decarbonizing New York City's power, NYPA should investigate taking over the Clean Path NY transmission project whose contract with the state was recently cancelled [1]. Since NYPA was already a minority partner in the project; since the constituent wind and solar projects already have permits and/or steel in the ground; since some of those projects may already be part of NYPA's current portfolio; since NYPA has decades of expertise designing, building, and operating transmission lines; and since, critically, the viability of the project always depended on NYPA's Blenheim-Gilboa pumped hydro storage facility, NYPA would be the natural entity to see it through as part of state energy needs.

To take over Clean Path NY, NYPA would surely need to directly enter into a Tier 4 REC contract with NYSERDA, rather than merely bidding on such a contract against other competitors in some prospective new auction process. Directly contracting with NYSERDA is exactly the key capability that NYPA identified in its September comments on the biennial review of the state's Clean Energy Standard [2].

Notably, it would not be the first time NYPA stepped in to take over, complete, own, and operate a power project that was essential to the state's energy system. In 1975 NYPA acquired from Con Edison, with assistance from the legislature, the partially built Unit 3 of the Indian Point nuclear power plant outside New York City and operated it until its sale in 2000 [3].

Third, as revealed in the state's recent Future Energy Economy Summit [4], advanced nuclear will prove essential for the reliability and decarbonization of the state's power system. Though the expanded authority does not include it, NYPA should seek to partner with other entities on advanced nuclear. Particular partners could include fellow public power authorities Ontario Power Generation and the Tennessee Valley Authority, the former being NYPA's partner in the original hydropower project, on their small modular reactor collaboration [5].

Sincerely,
Matt Huber, Professor, Department of Geography and the Environment, Syracuse, NY

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I STRONGLY urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

To be brutally honest, nothing less than 15 GW is acceptable for our state and extremely embarrassing for you as a œleader. It's actually really disgusting that this is even an issue up for debate when the future of our planet is at stake. Do your job as Governor and fight like the world depends on it because it literally does.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As a constituent who hopes to have kids, I know I am in good company when I say I hope we will still have a New York that our kids can enjoy in 50 years. It's very shameful that climate crisis preparedness has not yet been a priority because there is no plan B. It is nearly too late. We need action immediately.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I will be 76 years old in 2030, and time is running out for me to be able to ensure the safe and healthy climate for my daughter's and my grandchildren's future, because New York State is far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. We passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040 - a clean energy legacy I would like to leave to my descendants.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Ry

**Last Name:** Zhu

**Comments:** Dear Governor Hochul,

My name is Ry Zhu and I am a resident of Sunset Park, Brooklyn. I live near two peaker plants and the BQE and am concerned about the quality of the air that my friends and community members breathe. I recently learned that several peaker plants in the city are set to retire in the next decade. However because of rising electricity demand in the winter, they may delay their closures. If we build more renewable energy, these peaker plants would not be needed, sparing the lungs of my loved ones. We all know in our hearts that building more renewable energy is the right thing to do and I hope you™ll do your part to make the lives of the younger generation healthier and less grim due to climate change.

The following is a message from Public Power NY that I support wholeheartedly because they have been doing great work on pushing for more renewables.

Thank you for your time,
Ry Zhu

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

To the New York Power Authority:

I am writing to express my concerns regarding the increasing reliance on wind and solar power in New York State. While renewable energy sources are important, I believe that prioritizing them over more reliable, efficient alternatives like nuclear and hydropower can undermine the state's energy stability and affordability.

Reliability and Economic Concerns
Electricity needs to remain both reliable and affordable to ensure businesses can stay open and residents can afford their energy bills. Wind and solar power, while environmentally friendly, face inherent limitations. As they become larger shares of the energy grid, their economic viability declines due to their intermittent nature. They generate surplus energy when it's not needed and insufficient energy when demand is high, which necessitates expensive backup sources. To mitigate this unreliability, the energy system would require a massive increase in physical infrastructure, including land, longer transmission lines, large-scale storage solutions, and mining for the materials required to produce and maintain these technologies.

Furthermore, the cost of wind turbine installations has risen significantly due to disruptions in global supply chains and the increasing prices of essential minerals. This further complicates the economic feasibility of wind power.

Environmental and Health Impacts
Wind power projects also have significant negative effects on the environment and public health, especially in rural areas. In Western New York, which already relies on 90-100% carbon-free energy through hydroelectric and nuclear power, large-scale wind projects would disrupt valuable ecosystems. For example, one wind project in five towns would require clearing 1,550 acres of carbon-absorbing trees, fragmenting 1,680 acres of forest, and clearing additional land for access roads and electrical corridors. Is it truly beneficial for the environment to sacrifice these forests in the name of “green” energy? Is it worth all this impact to the environment and health of residents in this state to generate about 20%  of electricity from wind, compared to 98% for nuclear power?

Moreover, wind turbines are known to cause harm to local wildlife, particularly insect- and mosquito-eating bats. Over the 30-year lifespan of one wind project, estimates suggest that between 26,000 and 39,500 bats—some of which are on threatened or endangered lists—could be killed. How does this align with the state’s commitment to

environmental conservation?

Additionally, during a hearing on the Alle-Catt Wind Project, the state Department of Health testified that the project’s noise levels would pose a significant public health risk. The turbines, which are being placed too close to residents' homes, could cause health issues related to noise, flicker, and vibrations. How many more residents will suffer from these impacts?

Also, please consider solar panels should not be built on acres of farm land or acres of land in general. Only around 15% of sunlight gets converted to electricity, the rest is returned to the environment as heat because the panels are usually much darker than the ground they cover. Solar production declines in winter due to less sunlight and snow on the panels.

The Case for Nuclear Energy
Nuclear power provides a viable alternative. It is a proven, reliable, and resilient energy source capable of generating large amounts of electricity consistently without releasing harmful emissions. Nuclear power also requires far less land than wind and solar, making it a more space-efficient option.

Companies like Microsoft and Amazon are already investing in nuclear energy, with Microsoft working to bring the Three Mile Island plant back online and both Amazon and Google supporting the development of smaller, advanced nuclear reactors. Nuclear power uses a fraction of the land needed for wind and solar projects, and it doesn’t suffer from the intermittency issues of renewables. The life cycle costs of nuclear power are also lower, and it could reduce the need for energy storage, large-scale wind, and solar systems, and new infrastructure required to meet the state’s climate goals.

Conclusion
Increasing investment in intermittent generation, such as wind and solar, not only jeopardizes the affordability and reliability of New York's energy grid but also undermines our long-term energy security. I urge the New York Power Authority to focus on the most reliable, cost-effective, and environmentally responsible energy sources available—like nuclear, hydropower, and utility infrastructure upgrades.

New York should prioritize energy solutions that benefit both residents and the environment while ensuring the state's economic vitality. Nuclear energy is an essential part of this solution, and it’s time for the state to consider it more seriously.

Thank you for your attention to these critical issues.

Sincerely,
Marsha North
Freedom, NY

**Submit Date:** 12/08/2024 09:20:00 PM

**First Name:** Maysie

**Last Name:** Ocera

**Comments:** Hi,

My name is Maysie Ocera, and I am a constituent living in Astoria, Queens, New York.

With hurricanes and climate disasters intensifying around the world, New York is falling dangerously behind on the climate goals we committed to in the Climate Leadership and Community Protection Act (CLCPA) of 2019. To address this, New Yorkers passed the Build Public Renewables Act, giving the New York Power Authority (NYPA) the responsibility to build enough renewable energy to hit the CLCPA targets: 70% renewable electricity by 2030 and 100% by 2040.

Unfortunately, NYPA's current draft strategic plan for renewables doesn™t come close to meeting these goals. It proposes just 3.5 GW of capacity”far less than what's needed. Worse, even NYPA admits that most of these projects might never be completed.

To meet the CLCPA targets, NYPA must step up and commit to building at least 15 GW of renewable energy by 2030. This aligns with the demands of the New York State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who™ve voiced their concerns.

The draft plan also misses the mark in several key areas:

Uneven geographic focus: There are too few projects planned for the Hudson Valley and downstate New York, where electricity demand is highest. These communities deserve the benefits of cleaner air, green jobs, and lower utility bills through programs like REACH.
No clear plan to phase out peaker plants: NYPA has yet to outline how it will shut down its peaker plants by 2030 as required by law. These plants are major sources of pollution and harm public health in the already overburdened communities they operate in.
Minimal use of public land: Only 6% of proposed capacity would be built on public land or institutions. Public schools and campuses across the state could benefit significantly from renewable energy projects and retrofits.
Limited input from labor organizations: Labor unions like the AFL-CIO, Building Trades Council, and IBEW”representing millions of workers”are calling for a robust 15 GW buildout to ensure job security and stability for New York's workforce. NYPA's draft doesn™t reflect their input.
Missed financial opportunities: NYPA's draft doesn™t consider redirecting funds from its economic development operations”currently benefiting large corporations like Amazon and Citibank”toward renewable energy or reducing energy bills for New Yorkers.
Lack of specifics: The plan doesn™t provide enough details about project locations, costs, or timelines, making it hard to fully evaluate its impact on communities and finances.
Inadequate public hearings: The plan offers no hearings for Central New York or the North Country and only one for all of New York City, leaving many without a voice.
To address these gaps, I urge NYPA to revise the plan with the following changes:

Increase the total planned renewable capacity to at least 15 GW by 2030.
Develop a detailed timeline to phase out NYPA's peaker plants by 2030.
Allocate at least 5 GW to the Hudson Valley and downstate regions, with a stronger focus on distributed energy resources.
Fully decarbonize public institutions like SUNY and CUNY by meeting their energy demands with renewable projects.
Ensure the buildout creates and sustains a pipeline of good-paying, union green jobs.

Redirect economic development funds from corporate subsidies toward renewable energy investments and lowering energy bills.
Expand public hearings to include Central New York, the North Country, and all five boroughs of NYC.
By adopting these changes, NYPA can become a true leader in renewable energy development and help New York meet its ambitious climate goals while prioritizing equity, public health, and job creation.

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**
My name is Gareth Chase. I am a hs math teacher in Brownsville Brooklyn and a member of the UFT Climate and Environmental Justice committee..

We all know about the climate crisis and the uncertainty it raises for the future habitability of New York City, New York State, and the planet. But I am here to highlight the challenges that my students in Brownsville face right now and how NYPA's rapid renewable buildout could improve their lives immeasurably.

College is not the path for every NYC high school student. And It is not an option in particular for working class young people like my students many of whom come from families

that depend on them earning a steady income to pay the rent, put food on the table, and keep the lights on. This leads many of my students to pursue jobs in retail, in security, in fast food, or to turn to the underground economy for money. None of these options are careers, none of them set my students on the path to financial self sufficiency, wealth building, or home ownership, the things we would all want for our own children.

The tens of thousands of good union jobs that a 15gigawaft NYPA buildout will create will be a lifeline for students like mine and working class students across New York State who graduate from high school ready to work.

My mandate as a public school teacher is to prepare my students for the future. NYPA's mandate in this moment must be to prepare the future for my students. 15 gigawatts now,  thank you.

Gareth Chase
Rank-and-file UFT member and NYC Public School Teacher

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Pauline

**Last Name:** Beam

**Comments:** My name is Pauline Beam. I am a 73 year old retired nurse with chronic heart and lung conditions. I live in Brooklyn, NY,  zip code 11215. For the last several summers, air quality alerts and dangerous heat waves have forced me to remain inside, physically inactive, and socially isolated for weeks at a time.

I live about 1.5 miles from the Joseph J. Seymour Power Project, a gas-fired peaker plant owned by the New York Power Authority. Peaker plants are very polluting.  During periods of high electricity demand, this plant contributes to the toxic air that sickens me and many others. Moreover, the greenhouse gasses that Seymour Power emits exacerbate global warming, leading to more frequent and more severe heat waves.

Polluted air and global warming are not abstract issues for me. New York State must build renewable energy so that Seymour Power and all of New York's peaker plants can be retired or, ideally, repurposed. Given its location on Gowanus Bay and proximity to local wind and solar projects, using the Seymour Power site for battery storage for clean but

weather dependent alternative energy would be efficient and better for my health, the health of all Brooklynites, and ultimately, the health of the State.

By law, the NYPA must close its peaker plants by 2030. 2030 is the year that the Build Public Renewables Act directs the New York Power Authority to build enough renewable power to ensure that we meet the Climate Leadership and Community Protection Act targets of 70% renewable energy. New York Power Authority's draft strategic plan for renewables proposes to build only 3.5 gigawatts “ nowhere near the capacity needed to meet CLCPA goals. Moreover, the NYPA admits that it is likely that most of these projects will never even be built.

Furthermore, only one of these projects is in NYC, a 1.5 megawatt solar project slated for Staten Island. This miniscule percentage of an already inadequate statewide plan of 3.5 gigawatts is shocking! 60 percent of New Yorkers live in the Hudson Valley and downstate area, so demand for electricity is highest in this region. Ironically, the supply of renewable energy downstate is already relatively low; many of the New York's upstate regions are rich in hydroelectric power.

The plan proposed by the NYPA is completely insufficient. It does not comply with the CLPCA; it does not protect New Yorkers™ health. I urge you to increase the total planned capacity of clean renewable power to at least 15 GW, include a detailed plan for the phaseout of NYPA's peaker plants, and plan for at least 5 GW of new renewable energy in the Hudson Valley and downstate New York.

Sincerely,
Pauline Beam

**Comments:** Dear Governor Hochul,

We are all aware of the existential threat we face at the hands of the approaching climate crises. Supporting and ensuring the proper implementation of the Build Public

Renewables Act would put New York at the forefront of the fight to reverse the disastrous effects of climate change. We must act now to ensure a future for ourselves and countless other species, which will suffer intensely under the negative effects of a changing climate. I hope you will consider the below proposals.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Submit Date:** 12/08/2024 11:24:00 PM

**First Name:** John

**Last Name:** Willis

**Comments:** Dr. Governor Hochul and Mr. Driscoll,

My name is John Willis and I live in Flatbush, Brooklyn.

I am writing to you to urge you to expand NYPA's strategic plan to include 15 gigawatts of public renewables; to include at least 5 gigawatts of renewables for downstate New Yorkers; to shut down dirty peaker plants by 2030 as required by law; to redirect economic development funds from large corporations and towards renewable energy development; to fully decarbonize our public schools; and to do all of this while prioritizing green union jobs.

Just a few weeks ago, I walked outside to the smell of wildfire smoke in the air. Prospect Park ” my favorite place in this city and a place of deep respite for me and my dog ” was on fire due to an unprecedented drought caused by climate change. As a young person who cares deeply about protecting our beautiful world from the climate crisis, I felt deeply unsettled and extremely anxious that such a sacred place of mine was ablaze. As an asthmatic, it also meant I couldn™t go outside for a week due to other wildfires burning in New Jersey and Connecticut.

These fires aren™t normal. They™re not okay. We know why they™re happening: because we won't stop burning fossil fuels. And the only way to ensure they will not grow

and grow until all we love is destroyed is to transition to clean, renewable power. We're not moving fast enough, and our state ” our home ” is literally burning because of the inaction or our leaders.

My passion for fighting the climate crisis drove me to attend a NYPA public hearing recently touting NYPA's strategic plan to build public renewables, and I was appalled by the inadequacy of NYPA's current plans under Mr. Driscoll's leadership.

At the beginning of the hearing, a NYPA representative outlined the planned and highlighted that its 3.5 gigawatt goal would be enough to power cities like Helsinki and Boulder. Is NYPA not aware that it does not work for the people of Boulder or Helsinki? Are you, Mr. Driscoll and Gov. Hochul, not aware that you are mandated by New York law to achieve a 70% reduction in emissions in New York state by 2030, and not for some other much smaller city across the country or on the other side of the world?

It would seem that the current strategic plan was written without awareness that NYPA is associated with the state of New York and not Boulder or Helsinki, because it is woefully inadequate in its ambitions to deploy clean, renewable energy at the scale we need to stop the wildfires that have been literally burning our city and state down over the last month.

Meeting the carbon emissions reductions set out by New York law requires far more than a paltry 3.5 gigawatts of renewables to be built by 2030. 3.5 gigawatts just isn™t enough, and that isn™t just a matter of my opinion. It's the law. The NEW YORK law. And our New York public officials need to drastically expand their ambitions for building public renewables.

We need at least 15 gigawatts of public renewables built by 2030. We need peaker plants that poison our communities to be shut down. We need NYPA to prioritize the Hudson Valley and downstate New York, where the demand for electricity is greatest. We need our students to breath clean air and use clean electricity on SUNY and CUNY campuses. And we need good union jobs to support this transition to renewable energy.

Now is not the time to make excuses. It is not the time to be cowardly. It is not the time to be underperform and underachieve for the people of New York. Now is the time to get things done for New Yorkers, to meet the moment of climate crisis we live in, and to literally just follow the law.

There is no version of implementing BPRA that doesn't include 15 gigawatts of power as the floor, not the ceiling, of strategic planning. There is no version of meeting the urgency of this moment that doesn't involve closing the peaker plants poluting our communities immediately. There is no version of meeting this moment for our state that doesn't ensure we lower electricity costs for rate payers and provide 25,000 union jobs to build the renewable power we need. There is no version of meeting this moment that gives a break to big corporations like Citi and Lockheed Martin but makes everyday New Yorkers pay higher rates due to NYPA's sluggish build out of cheaper, clean energy.

No more excuses, NYPA. Get your head out of Helsinki, Boulder, and whatever other places in the world where 3.5 Gigawatts would be sufficient. We don't live there. You don't work for those places. We live here in New York and you work for New York, and New York needs 15 gigawatts of public power. New York needs fully decarbonized public schools. New York needs renewable power built to serve the Hudson Valley and downstate. New York needs bold climate action, and we need it now.

The current strategic plan is not enough. It is not serious. It is cowardly, and the only good thing about it is that it's not set in stone. I urge you to listen to the law, to science, and to the people like me who are terrified of a future of climate collapse due to your inaction. We demand you take the climate crisis seriously and build 15 gigawatts of renewables by 2030 at a minimum.

Sincerely,
John Willis

**Submit Date:** 12/08/2024 11:32:00 PM

**First Name:** Jacob

**Last Name:** Shuster

**Comments:** Good Evening, my name is Jacob Shuster, and I am writing the Governor because; as we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** The CLCPA and Build Public Renewables Act were passed because New Yorkers demanded that our government treat the climate crisis with the urgency it deserves. But rather than listen to New Yorkers and obey her legal commitments, Kathy Hochul is choosing to to obey the right-wing billionaires who really run Albany, who profit off the climate crisis and who were overjoyed when Donald Trump was reelected. Hochul isn't leading the charge against these climate arsonists. She is their accomplice. That's why she appointed Justin Driscoll, a Republican corporate lobbyist, to make sure that NYPA can't do the job it legally has to do.
Building only 3.5 gigawatts is not a good start. It is a failure and a betrayal. We need Hochul to stop doing Trump's job for him by sending us full-speed into the climate crisis.

We need NYPA to lead. We need 15 gigawatts.

**Comments:** It is imperative that NYPA build out and help develop as much renewable energy as possible as fast as possible. NYPA's plan should triple the amount of renewable energy proposed.  This could be done by aggressively developing off shore and on shore wind farms on Lake Erie and Lake Ontario, deploying solar panels on all the hazardous waste sites deployed around the state and especially in Western New York, and requiring private companies that benefit from cheap hydro power from NYPA to install solar panels and other renewable energy generators at the locations where they are receiving the power.  NYPA should also help with building transmission lines to bring power from the places where it's being generated upstate into NYC.  Most of the opposition to renewables is being agitated and supported by fossil fuel interests that promote lies and misinformation about renewable energy to scare the public.  With the urgent need to change course demanded by climate change and recognized in the NYS Climate Leadership and Community Protection Act (CLCPA) it is hoped that NYPA will  greatly expand its generation of wind, solar and other non-fossil fuel energy sources.

**Comments:** Thank you for taking the time to consider our comment. First, there's an error on the Future Project map on page 36. H1 is showed multiple times. At least in the North Country, I believe our H1 is supposed to be H4.

Next, a comment on the REACH program - there are many places in the plan where the language "low income households in Disadvantaged Communities will be served". This should be expanded to include all low income house holds, not just those within geographic DACs. The Disadvantaged Communities Criteria includes geographic DACs as well as low income HH outside of DACs, therefore they should be included.

Given the complexities of this draft plan, it would be helpful to laypeople and frankly most industry folks to have more opportunities to speak to NYPA staff about this plan. Especially in areas where there are proposed future projects. Even with the public comment sessions and with coordination with the Regional Clean Energy Hubs, most New Yorkers likely know little to nothing about these developments.

**Comments:** The NY State Climate Act (CLCPA) requires 70% renewable energy in the state by 2030 and 100% renewable by 2040.  We are nowhere near that goal.
New York Power Authority must increase the production of renewable energy to at least 15 gigawatts. Also, NYPA must produce at least 25,000 union jobs and apprentice programs to build out renewable energy in NYS.
In addition, NYPA must decarbonize public schools and universities in NYS.
New York has a responsibility to fight climate change swiftly. It's up to you, or we face weather disasters and other dire effects from the climate crisis.

**Comments:** There is no need for NYPA to expand its mission to include wind and solar generating facilities.  ORES, the PSC, and NYSERDA are capable of overseeing all phases of wind/solar development.  Adding NYPA to the process only creates another bureaucratic layer which contributes to expense and inefficiency.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am very concerned that we are not doing more to advance renewables in New York.

As a consumer, my energy costs are higher than ever, while I have cut back on energy use as much as I can.

The health of the environment is very important to me as it is essential for public health.

I want to see public renewables increase greatly in New York to address energy costs, and environmental and public health.

New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must and build at least 15 GW of renewable energy by 2030, in compliance with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

These goals are common sense, practical steps New York can take to protect our state's future. Continuing to ignore climate change while New York City is ravaged annually by hurricanes and flooding is not a sustainable strategy going forward. As a tax payer I am outraged by the apathy of our executive branch when it comes to climate. Now is a perfect time to start doing your job,

Sincerely,
Sheilagh Lichtenfels

**Comments:** _____

_____

My name is Dr. Michael Menser and I am an Associate Professor at Brooklyn College/CUNY have been at CUNY as a student, staff and/or faculty for more than 30 years. My main request to you today with respect to the Strategic plan is to put CUNY in it. As of now It is not.

My campus is one of the three CUNY campuses which are part of the Decarbonization Leadership plan which NYPA is leading. BC is working with your consultant Ramboll which just completed a report assessing the energy use and energy infrastructure of our college. Next you and they are to work with BC and CUNY to develop a plan to create projects to help reduce emissions and pollution and increase the energy efficiency of our buildings. We are very excited to be part of this, especially because many of the buildings on our campus are approaching 90 years old and in need of basic upgrades as well as more sophisticated retrofits to make our buildings not only energy efficient but also healthy and safe. I am in such a building, Boylan Hall and in my office I have a picture of Pres. FDR and Mayor Laguardia on my campus for the opening of my building and several others which were funded by the New Deal and built with workers from the Works Progress Administration. But my building, like so many across CUNY and across NY city and NY state, may look good on the outside but on the inside is poorly insulated, mold prone, hot in summer, and cold in winter. Indeed Boylan Hall has been in such bad shape HVAC wise is part of the reason our cafeteria has not fully reopened since 2020.

We need the NYPA strategic plan to be ambitious and funded to make our buildings safe and protect the health of the students, staff and faculty who work in them. We need

them to pollute less, to use less energy, especially during peak times which can not only lower our electric bill but reduce stress on the local and city wide grid.  Retrofitting and upgrading CUNY campuses across the city could also help to better integrate solar, storage, heat pumps and geothermal and thermal energy networks as well as vehicle to grid projects.  With funding from NYPA and/or its partners, CUNY’s physical campus can be exemplary accessible public sites for such projects; our Urban Sustainability students could study how do to this work and track its costs and benefits with community members, our philosophy students could track the moral and political issues working alongside EJ groups as we aim for justice.  Community members from disadvantaged communities could receive workforce training to build these projects as they already do at KCC, LGA, and City Tech.  Indeed, it may make sense for NYPA to develop a special unit and area of expertise in Building Decarbonization alongside its expertise in transmission and hydro.  CUNY with out Building Performance Lab and many sustainability themed BA, BS and MA programs, could be a great partner on this as well.

Please put CUNY in the strategic plan, deliver on the Decarbonization leadership plan, make us a strategic partner, and let's lead together in a public public partnership and show the world what NY can do.

And now this from DSA Ecosocialists:
As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

To Whom It May Concern,

Thank you for soliciting public comment on the NYPA Renewables Draft Strategic Plan. It has been a pleasant surprise to see New York public employees take this seriously.

First, the portfolio of 3.5 GW of potential projects is a surprising achievement. Public servants at NYPA should be commended for the incredible progress they've made carrying out their new expanded authority to build renewables, especially given the fact they started from scratch entering this already-mature field. Moreover, the Draft Strategic Plan is filled with critical information on financial and legal concerns that would benefit public power authorities across the nation.

Second, to advance its Strategic Plan while also making a massive contribution to decarbonizing New York City's power, NYPA should investigate taking over the Clean Path NY transmission project whose contract with the state was recently cancelled [1]. Since NYPA was already a minority partner in the project; since the constituent wind and solar projects already have permits and/or steel in the ground; since some of those projects may already be part of NYPA's current portfolio; since NYPA has decades of expertise designing, building, and operating transmission lines; and since, critically, the viability of the project always depended on NYPA's Blenheim-Gilboa pumped hydro storage facility, NYPA would be the natural entity to see it through as part of state energy needs.

To take over Clean Path NY, NYPA would surely need to directly enter into a Tier 4 REC contract with NYSERDA, rather than merely bidding on such a contract against other competitors in some prospective new auction process. Directly contracting with NYSERDA is exactly the key capability that NYPA identified in its September comments on the biennial review of the state's Clean Energy Standard [2].

Notably, it would not be the first time NYPA stepped in to take over, complete, own, and operate a power project that was essential to the state's energy system. In 1975 NYPA acquired from Con Edison, with assistance from the legislature, the partially built Unit 3 of the Indian Point nuclear power plant outside New York City and operated it until its sale in 2000 [3].

Third, as revealed in the state's recent Future Energy Economy Summit [4], advanced nuclear will prove essential for the reliability and decarbonization of the state's power system. Though the expanded authority does not include it, NYPA should seek to partner with other entities on advanced nuclear. Particular partners could include fellow public power authorities Ontario Power Generation and the Tennessee Valley Authority, the former being NYPA's partner in the original hydropower project, on their small modular reactor collaboration [5].

Sincerely,
Fred Stafford

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Governor Hochul & NYPA CEO Driscoll,

Of the thousands of generations who have lived since our species spread across the globe, only three have been alive at a time when we understand that we face a climate crisis, understand its cause and cure - and still have time to successfully address the crisis before catastrophe ensues. If the expression "the cause of our times" was ever apropos of any issue, surely it applies to the climate crisis in our times. When the history books are written, all other issues will have faded to insignificance. You will be remembered first and foremost for what you did - or failed to do - to avert catastrophe.

That's why I am calling upon you to see to it that New York builds 15 gigawatts of new, publicly owned renewables by 2030, as contemplated by the Build Public Renewables Act. It is abundantly clear that we cannot count on the new administration in Washington to be anything other than a hindrance. Now is the time for far-sighted leadership in the State of New York. Let your bold steps to address the climate crisis be your legacy for the State, the country and the world.

Sincerely,
Stuart Souther

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** Dear Governor Hochul:
Please don't miss this opportunity to change New York for the better on multiple fronts simultaneously: from new job creation, to cleaner air for New Yorkers to breath, to the movement toward a less dependent fossil free future and the mitigation of the very real and very expensive realities of climate change we need you to enact the Build Public Renewables Act and build 15 gwatts of renewables now. We can't afford to wait!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **Comments:** New York should be a leader, never a follower. We were once a state at the forefront of building new types of buildings, new forms of transportation infrastructure, and new types of communities. But New York and it's leadership have demonstrated a reluctance to take charge, and instead have become complacent to only improve their lives, and not the lives of the people they represent. We can be a leader in climate change, a leader in renewable energy, and a leader in climate resilience, if only our leaders step up to the place and be leaders instead of cowards.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **First Name:** Bridget

**Last Name:** Boyle

**Comments:** My name is Bridget Boyle and I have grown up in NY and have proudly been a NYC resident for almost a decade. New York having an opportunity to lead the country by meeting our own climate goals would provide an example to the rest of the country that we can transition off of oil and gas and provide a better future to the next generations. We have a responsibility to meet these goals so that the leaders of tomorrow do not continue to fight the battles of the past!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. — There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

Greetings,
I am writing to ask that the New York State government offices responsible for pushing us through to a sustainable energy future, to please step up to fund any gaps caused by

lack of private investment in the NYBPRA.
This is truly a ‘build it and they will come’ moment.

Find a crucially necessary public good,
take a seeming risk from the financial perspective (bond rating),
hire union labor / site projects in visible areas (more NYC sites would be wise),
put the state’s name all over all of the projects to show who is responsible,
build a political coalition of the people committed to sustainability and the workers who are delivering it ,
generate market competition by demonstrating to the private sector these projects work,
help stem climate change,

rinse and repeat.

Thanks for your consideration,
Dr. Brendan Hogan

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** New York state needs to live up to its rhetoric of leading on climate change. We have the laws in place but we aren™t following through with the actions that would make the state a climate leader.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** Dear Governor Hochul,

I'm a constituent from Beacon in the Hudson Valley. I've been amazed by the high and rising cost of energy here, stemming in part (I believe) from a lack of competition for the Central Hudson utility. But beyond problems with Central Hudson, I believe we need systemic change in this area, and New York can be leader.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW " nowhere near the capacity needed to meet CLCPA goals. **Last Name:** Payne

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____
_____

Hi, I'm not sure if it's too late to send this message but - my name is Jenni Rein, I live in Manhattan and am a proud alumna of City College/CUNY. I have asthma and the brush fires in Palisades Park and Inwood made me sick although I had all windows closed taped and the air purifiers working in full force. For the sake of our health and the generation that is coming I want NYPA to dramatically increase its draft proposal and to build 15 GW of renewable energy instead of the 3.5 GW in its proposed plan. According to COP29, NYC has the third poorest air quality in the world.  NYPA must ensure enough renewable energy in NYC. Thank you.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

The current implementation of large-scale renewable energy projects is deeply flawed, counterproductive, and unfair. In its rush to address the climate crisis, which is real, New York State is causing needless divisions, opposition to renewable energy in general, and loss of trust in state government. It is also a threat to our land, homes, and neighborly relations across our rural communities.

Recommended Actions to NYPA:

1.Liberty Renewables' 24 wind turbine project (Hoffman Falls across Fenner, Nelson, Eaton, & Smithfield) and Cypress Creek's Oxbow Falls 1,000-acre solar project shows disregard for the important forms of democratic process that our communities depend on. Liberty Renewables and Cypress Creek representatives seek no common ground with our towns and our residents. Liberty Renewables and Cypress Creek have never approached us to negotiate if, where, or how their project could best be built. They simply came into our towns, sold leases to individual landowners (many of whom don't even live in Fenner) and proceeded with their plans. Our town already hosts a large-scale wind

farm, made up of 20 turbines installed and managed by ENEL- North America. ENEL worked with Fenner for several years of careful negotiations to design a project that would benefit homeowners and the town, have minimal environmental impact, and sited away from areas where there is clustered housing. This successful project should be a model for New York State. Liberty Renewables and Cypress Creek engaged in no such process for their current proposed project.
2.The companies have disregarded our town's 10-year strategic plan or zoning laws, nor do they respect our town's elected leadership. Liberty Renewables and Cypress Creek have told people that their project is a "done deal" and therefore they "better get on board" and make some money. They are relying on the fact that New York took away "home rule" and gave power to the Office of Renewable Energy Siting (ORES) to override the wishes of local governments. In other words, they concluded that no negotiations were needed.

3. Fenner is already contributing to the common good of New York with its 20 wind turbines and with the approval for five more. The burden of providing renewable energy to the state should rest with all towns and counties. One town should not have to bear the inordinate burden of this need. These two new projects would change the entire landscape of Fenner forever. It would no longer be a rural farm and residential town but rather an industrial energy conglomerate. Respect for all parties and a balanced approach is needed and is not happening.

4. The size and scope of these new projects are massive. Liberty Renewables' turbines are 677.5 feet tall – over twice the size of the current ENEL turbines, and, we understand, are an untested model that is usually used offshore. Imagine having structures taller than the St. Louis Arch or twice the height of Syracuse's State Tower skyscraper in your front yard. They are proposing 24 turbines of this size stretching across Fenner, Nelson, Smithfield and Eaton, with half of these to be located in the middle of 125 homes in Fenner. They wlightsabove us, wrap around our homes, and flash their lights and flicker continuously on the hills above us. Some turbines are a quarter mile from our homes.

5. National real-estate surveys tell us that the loss in property values of our homes would be anywhere between 25% and 75%. In other words, it will be almost impossible to sell our homes in the shadow of these huge turbines. The latest national survey (funded by the US Dept of Energy and Wind Turbine Tech Dec. 2023) estimates a loss of 11% in home value for houses within one mile of a turbine. Liberty Renewables turbines are a quarter or half mile from our homes.

6. Prime farmland would be permanently removed from our town's agricultural contribution to the common good. A thousand acres would be covered with solar panels. Increasingly, Amish families have moved to Fenner and set up farms. They are concerned about the industrialization of the town and loss of farmland for future agricultural growth. Hundreds of acres of trees, the backbone to the solutions of the climate crisis, would be cut down, no longer offering clean air, carbon sequestration, and home for many species. This is counterproductive to NY State's goal of encouraging tree planting and growth.

7. The impact on the physical environment would be huge including: gigantic concrete foundations, noise from the blades, constant red flicker lights, a network of access roads, access power lines, a substation, a meteorological tower, an aircraft detection lighting system and an operations and maintenance facility. In addition to the enormous and lengthy disruption during construction, there will be crews of people working all the time, truck traffic and the undermining of farms and fields. No one moved to Fenner to live amid an industrial energy park.

8. Environmental studies have been done on large turbines' flicker, bird migration, visual pollution, and more, but none of these studies have been shared with our residents. When asked at a town board meeting last year what the impact of the concrete footing would be, including the toxic leaching into our water, how deep, and how they would be removed when the turbines reach their natural lifespan of 15 years, no solid answers could be given by the Liberty Renewables' representatives. ALL FENNER RESIDENTS ARE ON WELL WATER. Our research shows that the concrete footings will be at least 30 feet deep to accommodate the massive size of the turbines, and would never be removed, rendering the land unusable forever.

9. The Fenner Town Board recently held a hearing and voted to bar the installation of large-scale battery retention facilities in the town, because of the dangerous nature of these facilities due to the frequency of their catching fire. A fire in Fenner would be catastrophic due to the lack of a local fire department and the extensive forest and meadow lands that would be destroyed by an uncontrolled fire. We commend the Board for this safety-seeking action. We understand that this project contains the necessity for constructing such a facility in order to store power for transmission. Fenner is the wrong place for this project.

We all want renewable energy, but it must be done in a thoughtful and balanced way. This is NOT what is happening. The solution to the climate crisis must benefit everyone, not just a few, for it to be a "true" solution. We in the neighborhood are not benefitting. Many neighbors are scared and angry about what is being done to us. A neighbor that signed a lease from Liberty Renewables attended their open house held in Fenner on October 22nd. When he heard the scope of the project he said, "I made a big mistake," and is now trying to cancel the lease. We are convinced that this project should not be built.

Successful models for the planning and implementation of large scale rural renewable energy projects already exist in New York. (e.g. Fenner, Madison, & Munnsville). These models should be copied, not ignored. Instead, the state has pursued a policy of giving total power and authority to private international companies to come into our rural towns and build whatever they want – regardless of the needs, rights, desires, zoning laws and traditions of our towns and municipalities. Such proposals destroy good farmland and cut down thousands of trees (needed to prevent climate change). Such projects, when designed without local negotiations, impact plans for future farming, loss of home values, create negative environmental impacts, and destroy rural beauty view sheds.

Most of our citizens are supportive of large-scale renewable projects but the current developments are driving people away from supporting renewables and driving them out of our state.

To make the transition to renewable energy equitable and effective, the NY Power Authority in its “Renewable Strategic Plan” must take a strong stand to restore to local municipalities the following mandatory guidelines that would bring a balanced and thoughtful process for the implementation of such projects:

1. The power of local towns to negotiate whether a given project is appropriate for that town.

2. The power of local towns to negotiate the number, size, and location (siting) of a given project.

In addition, the Hoffman Falls and Cypress Creek wind and solar projects should not be approved unless the Towns of Fenner, Nelson, Smithfield and Eaton are given authority to approve, reject or negotiate with these private international companies. This should also be true for all rural towns in New York.

**Comments:** Hi, my name is Michael, I'm a Brooklyn resident terribly worried about the ongoing climate crisis. I was a teenager when Superstorm Sandy hit New York, which caused my family to live out of a hotel for 6 months. The recent drought and wildfires in the area have been especially concerning to me, given that we can only expect these deadly "once-in-a-lifetime" events to happen much more frequently.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. — While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. TO: Governor Hochul, NYSERDA and others it may concern

CC: Residents, Media, Local Government

We are New Yorkers, FURIOUS, OUTRAGED and deeply troubled by the destructive path your energy policies are paving for the hardworking families and businesses of our state.

I need to remind you and all others about the NY Buffalo Bills! Hochul's husband William Hochul’s client! They Received huge NY tax breaks AND vendor perks to use natural gas at their stadium!

The 2024 New York State Energy Plan and your climate agenda, while cloaked in rhetoric about sustainability and equity, mask the detrimental impact they will have on our middle class, manufacturing industries, and energy affordability. Your actions suggest a stark disconnect between your stated goals and the reality New Yorkers are facing.

Your administration’s aggressive push for electrification and decarbonization under the guise of combating climate change is riddled with contradictions. While you promote the banning of natural gas appliances and mandate costly electric vehicle adoption, your policies directly undermine the economic well-being of residents and businesses. The

energy plan’s substantial rate increases, coupled with your push for congestion pricing in New York City, are just more examples of how your administration is taxing working families into extinction. These initiatives will not only strain household budgets but also penalize commuters and small businesses that depend on transportation access, driving economic activity away from our state.

Your hypocrisy in this matter is deeply troubling. Consider your support for substantial taxpayer-funded subsidies for the Buffalo Bills’ new stadium. Not only did this deal benefit your husband William Hochul’s former employer, Delaware North, but it also blatantly defies the climate policies you champion. The stadium deal allows vendors to use natural gas—an energy source you are effectively banning for everyday New Yorkers. Such preferential treatment reveals a pattern of double standards, where political allies and corporate interests benefit, while ordinary citizens shoulder the burden.

https://www.buffalobills.com/news/buffalo-bills-and-energymark-extend-long-term-energy-supply-partnership <https://urldefense.com/v3/__https://www.buffalobills.com/news/buffalo-bills-and-energymark-extend-long-term-energy-supply-partnership__;!!MQuuhw!2QClnXeU95kOsCdaGAombU6ULvW4FpVulM2WaXslo6kl_VED0vthERvN_8u-S8i2ACj-6rbW5vcWdPZzuxDFBuqZkrO_6PtQhgXUvw$>

https://www.nytimes.com/2023/05/28/nyregion/hochul-delaware-north.html <https://urldefense.com/v3/__https://www.nytimes.com/2023/05/28/nyregion/hochul-delaware-north.html__;!!MQuuhw!2QClnXeU95kOsCdaGAombU6ULvW4FpVulM2WaXslo6kl_VED0vthERvN_8u-S8i2ACj-6rbW5vcWdPZzuxDFBuqZkrO_6PuVhP4J0w$>

Meanwhile, you echo President Biden’s mandates for the illegal alien invasion (also costing New Yorkers) and widespread electrification without addressing the practical implications for energy costs, grid reliability, or alternative solutions. Additionally, you want the middle class to pay more for utilities in order to subsidize rates for the low income!

New York’s ambitious goals, while noble in theory, are being implemented with little regard for their disproportionate economic impact on working families or the feasibility of the infrastructure required.

Governor Hochul, if your true goal is equity and sustainability, why does your administration continue to shift the financial and logistical burden of these changes onto those least able to bear it? The middle class and small businesses are not pawns for political experiments or ambitious soundbites. They deserve pragmatic, balanced policies that protect

their livelihoods while moving toward a sustainable future. Your tenure should prioritize thoughtful leadership, not performative climate gestures that enrich the few while impoverishing the many. I urge you to reconsider your energy policies and adopt a balanced approach that supports environmental goals without sacrificing the economic stability of New York’s residents and industries.

Sincerely,

Chris Monahan

**Comments:** Dear Governor Hochul,

I'm deeply concerned about the impending climate disaster,  the control of our political and economic lives by narrow corporate interests, and the affordability crisis in New York. Acting on the Build Public Renewables Act would address all three!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of

these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Brennan

**Last Name:** Howell

**Comments:** Hello, my name is Brennan Howell. I™m an organizer with Public Power NY, and Capital District DSA. I need to tell NYPA that the current draft renewables strategic plan is unfortunately insufficient. Just this year NY has been hit by unprecedented droughts, flooding, and wildfires. In the face of a worsening climate crisis, New York cannot afford to fail its climate goals, and this proposal as is, would set us on track to fail.

3.5gw of renewables is not nearly enough for us to hit our CLCPA mandate of having 70% renewables by 2030. Even if this is the first tranche of projects, the expected attrition of some of these projects means that we™ll be playing catch up before we even begin. We need a much more ambitious draft proposal if we™re going to build at least 15 gw by 2030, which is what we need to hit our legal mandates.

I™m calling for this draft to include offshore wind projects. Offshore wind would be a reliable source of power, complementing the build-out of solar farms with strong ocean winds blowing at night. The port of Albany provides a prime location for development, and would bring good jobs to workers in the region.

All across the state there are opportunities for distributed energy generation. NYPA's proposal indicates an intention to partner with communities on distributed energy projects, but there aren™t any plans or timelines. Even right in the Capital Region, in places like Latham and Colonie, there are miles and miles of parking lots hugging residential areas, which provide opportunities for solar panel canopies.
There are also no plans for any geothermal energy systems, which should not only be included in this proposal, but should be part of NYPA's distributed energy as well.

In the capital district there are 36,000 households considered energy burdened, paying more than 6% of their income on energy costs. With massive rate hikes on the horizon, New Yorkers need relief from their high utility costs. Thanks to the REACH program, the more revenue NYPA earns from renewable projects, the more economic relief they can provide to ratepayers. Building 15 gw, as opposed to just 3.5, will do THAT much more to help the people of New York.

So it's imperative that NYPA increase the proposed capacity to at least 15 gw of new, publicly-owned renewables by 2030. Creating 10s of thousands of green union jobs, the end of peaker plants polluting our neighborhoods, and the kind of climate leadership that will make New Yorkers proud.

New Yorkers are facing the impacts of the climate crisis and spiraling utility costs. This week we™re experiencing record breaking droughts and wildfires in November. Capital District residents are facing utility rate hikes of up to 20%. The answer to both of these issues is to build public renewable energy. After the election earlier this month, it's clear

that the answers won™t come from Washington, but we can™t afford to wait. New York, and the Capital Region need to lead the way towards a buildout of 15 gigawatts of renewables, for our bills, for our climate, and for our future.

**Last Name:** Fried

**Comments:** Especially with Trump returning, we need Blue states to show that we can quickly transition to renewable energy. NY's climate plan targets 15 GW of renewable energy by 2030, but we are falling behind.

NY's Build Public Renewables Act directs the NY Power Authority to build enough public renewables to meet our targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan only proposes 3.5 GW - well short of those goals!

These are some other problems that need to be fixed:

- very few projects are planned for downstate NY and the Hudson Valley ...where electricity demand is greatest.
- there is still no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law.
- the draft plan leaves out feedback from labor organizations like AFL-CIO and Building Trades Council, who represent 2.5 million workers in NY and are calling for 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
  — In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
  — While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
  — There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
  — The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

  — Increase the total planned capacity to at least 15 GW
  — Include a detailed plan for phaseout of NYPA's peaker plants
  — Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
  — Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
  — Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** In this dire moment in national politics, state-level leadership, honesty, and follow-through is extra important to me as a citizen of New York.  Not implementing our nation-leading, climate-crisis-fighting laws erodes my fragile trust in NYS' government to respect the will of the people and the letter of the law.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I expect NYPA to do more than it has done so far to equate  energy production and environmental health. It must take a strong lead in implementing energy policies and programs. As a NYS resident, I expect NYPA to prioritize the health of all residents, including our children and our children's children. NYPA should increase renewable energy ro at least 15 gigawatts. It should also produce at least 250,000 union jobs and apprentice programs to build, care for, sustain, and expand renewable energy in NYS. It should decarbonize schools and universities in NYS. And, finally, NYPA has the responsibility of dressing environmental injustices and can do so by increasing support for its REACH program, giving bill relief to NYS low-income households. We need more public input.

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

To whom it may concern,
Please accept this public comment on the NYPA Renewables Draft Strategic Plan:

Thank you for the opportunity to provide public comment on the NYPA Renewables Draft Strategic Plan. I am glad to see this planning moving forward, but I ask that NYPA increase its ambition and carry out additional projects beyond what's proposed in this first biennial plan. Public building of renewables is eminently preferable to private for so many reasons -- most vitally, its lack of focus on profit-making better ensures that projects won't be abandoned if profit margins deteriorate, and without the add-on profit costs, publicly built projects can be built with lower price tags, ensuring lower-cost energy generation for the life of the project's generating capacity.

I understand from the draft Strategic Plan, section 3.2.3.2, that despite a capacity to access low-cost bond-based financing, NYPA considers access to capital as the "primary limitation on the Power Authority's ability to deploy renewable generation."  It is, of course, appropriate for NYPA's board of trustees to take a prudent approach to raising capital. That said, it appears that NYPA has ample capacity to issue additional long-term debt responsibly through its revenue bond program. Fitch Ratings, for example, notes the Authority's "very low financial leverage" (emphasis added) in its September 2024 rating report.

The coverage ratio for NYPA's senior lien revenue bonds is indeed very high (in excess of 5x through its current four-year financial plan). In addition, NYPA's "fundamentals" are strong: it generates power at very low cost (the St. Lawrence-FDR and Niagara facilities, which together produce more than 50% of NYPA's power, are among the lowest-cost generation facilities in the US), it has uniformly strong balance sheet and operating metrics, and sells power at very competitive rates to a customer base that is largely "permanent" (governments, including New York City, account for over 80% of customer revenues).

Given that we are perched on the edge of climate catastrophe, and that NYPA’s financial metrics show wiggle room for bolder financial moves, and given that NYPA’s financial report for 2023 states that “the mission of the Power Authority is to lead the transition to a carbon-free, economically vibrant New York through customer partnerships, innovative energy solutions, and the responsible supply of affordable, clean, and reliable electricity" (emphasis added), I ask that NYPA consider all options to acquire the capital needed to ramp up the development of renewables and lead the transformation New York needs. These options need not be limited to engaging the financial markets. I encourage NYPA to also work with Bond Act administrators, the Governor and legislative leaders to acquire an appropriation to fund this work; terms could include an expectation of repayment through revenues from projects, once online.

NY renewable energy development goals are being thrown off track as private developers cancel projects. With adequate funding in place, please put in motion plans to take over as many of these projects as possible, most recently CleanPath NY, to keep New York's renewable energy development progress moving forward. These projects may not have been lucrative enough to please investors, but NYPA's capacity to access low-cost bond-based financing and lack of a profit-driven investor environment can help transform these projects into financially viable ones.

With adequate funding, I also encourage NYPA to concentrate resources into adding renewable energy generating capacity and battery storage onsite at public K-12 schools and colleges, and government buildings and parking facilities across the state, and then construct Virtual Power Plants from these aggregated Distributed Energy Resources. Using publicly owned properties as sites for development should speed up the siting process, and positioning this development on highly visible buildings and sites in communities across the state will spread public awareness that we're in an essential transition away from fossil fuels to renewable energy use, and provide a visible model for what New Yorkers must do to their own homes. With 4772 public and charter schools in New York State, 89 SUNY and CUNY campuses, 593 municipalities, and 62 counties, such an approach could generate sizably productive VPPs, especially since the academic buildings on the list likely have power to spare when school is not in session.

I submit these comments in the context of having just spent two weeks as a delegate to COP29 in Baku, Azerbaijan -- two weeks of hearing heart-wrenching reports of climate wreckage from Small Island Developing States (SIDS) and Least Developed Countries (LDCs) and extraordinarily sobering data from scientists. No one can experience a COP without emerging with a firm sense that we do not have the moral luxury to miss our emissions reductions targets here in New York, as NYSERDA and DPS predict we're on track to do (NYPA Renewables Draft Strategic Plan pg 55). What we are doing here in New York is directly tied to current wreckage elsewhere in the world, and will derail our own future here if we do not ramp up the speed of our transition away from burning fossil fuels. We need NYPA to propel forward sufficient renewable energy development to get NY back on track to meet -- ideally exceed -- CLCPA requirements.

Respectfully submitted by:

**First Name:** Julie

**Last Name:** Trachman

**Comments:** _____

_____

My name is Dr. Julie Trachman. I live in Brooklyn and I am a full-time faculty member at CUNY's Hostos Community College in the Natural Sciences Department. Hostos is in the South Bronx, the poorest U.S. congressional district. Two of the approximately 20 New York City-based peaker plants are located in close proximity to Hostos. As a result of the inefficient burning of fossil fuels, peaker plants produce large amounts of the PM2.5 pollutant and potentially 20 times the amount of the greenhouse gas, nitrogen oxide (NOx can lead to ground level ozone formation in hot, sunny weather when these plants are likeliest to operate). PM2.5, NOx and ozone contribute to the high asthma rates we see in South Bronx residents, many of whom are our students and their families. The peaker plants also further promote climate change by producing larger amounts of CO2.

As part of our efforts to make New York State (NYS) greener, these peaker plants need to be shut down as has been promised. In these last few months, we have seen the increased effects of climate change throughout the world. This includes: New York City where we have experienced a somewhat historic drought and wildfires this fall; the south and Midwest hit by increased numbers of tornadoes; more intense hurricanes making U.S. landfall; and the west coast pommeled more and more by so-called atmospheric rivers in the winter alternating with prolonged drought and wildfires in the summer. Like other parts of the world, the northeast is now seeing increased incidence of climate change related diseases such as the vector-borne babesiosis and Eastern equine encephalitis virus infections.

Passed in 2019, NYS's CLCPA, requires us to be 70% reliant on renewable energy sources by 2030 and 100% reliant by 2040. NYS is very far from reaching these goals and we are running out of time. The recently proposed NYPA Strategic Plan offers only a 3.5 Gigawatts increase in the next 2 years, which puts NYS even further behind. We should be aiming for the addition of at least 15 Gigawatts to keep pace with these goals. Furthermore, not enough is being done in NYC, where only one renewable energy project has been proposed. CUNY, a public entity with over 300 buildings and other public buildings in NYC and upstate, should be capitalizing on moneys obtainable via the federal IRA and NYS' BPRA, to become decarbonized. NYPA should be working with us to install solar paneling, to utilize geothermal energy, etc. as well as have work done in the building infrastructure so as to become more energy efficient. This work would reduce CUNY's energy costs, which are paid for by NYC/NYS and would significantly decrease CUNY's carbon footprint. All of us would benefit and this work would help boost the NYS/NYC economy by providing thousands of green jobs. Given the recent federal election results, NYS and other U.S. states need to lead our efforts to fight climate change as we needed to do years ago.

**Comments:** According to the Intergovernmental Panel and Climate Change (IPCC), while the frequency of heat waves is increasing, rising levels of carbon dioxide in the global atmosphere have not resulted in detectable increases in hurricanes, floods, fire weather and other forms of climate devastation. See IPCC, Assessment Report 6, vol. 1 (The Science Basis), Table 12.12. Moreover, in IPCC's AR6, the Representative Concentration Pathway scenario 8.5 is no longer considered plausible. RPC 8.5 predicts global average temperature will increase by 6-8 degrees C by 2100, but AR6 states that under the most plausible scenario, the increase will be close to 2 degrees C and will begin to level off and decline by 2100. New York State has much more time to achieve its climate goals than climate activists insist with their shrill and wholly unsupported claim that time is running out. This is also no support for climate activists call to build more large-scale renewables. There is no evidence that significant emissions reductions have resulted or will result from the build-out of more renewables upstate. Renewables are awarded Renewable Energy Credits for each hour of power they deliver to the grid, but this has never been associated with a known level of emissions reduction. Before embarking on a new level of build-out of large-scale renewables, the State owes it to its citizens to provide a defensible study of environmental benefits of doing so. Otherwise, the credibility of the State's Energy Plan will be rightly questioned and support for any kind of climate action will be discredited.

**Comments:** I have been concerned about the climate crisis since learning about it in school in the 1990's and puzzled by the failure to do what we need to do to address it. We need to stop burning fossil fuels. Now. And that means that we need to build enough public renewables. It also means that we need to reconsider our priorities and do things

that build a stronger society: good, stable jobs; spending on basic human needs and the foundations of justice, peace, and civic engagement rather than spending on more things that we don't need and subsidizing multinational corporations focused on profit rather than the common good.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Council on Intelligent Energy & Conservation Policy (CIECP) and Promoting Health and Sustainable Energy (PHASE) Comments on NYPA Renewables Strategic Plan

Submitted Via email to:

The Council on Intelligent Energy & Conservation Policy (CIECP) and Promoting Health and Sustainable Energy (PHASE) support pursuit of the projects referenced by the New York Power Authority (NYPA) in the Renewables Strategic Plan.

However, much more coordinated and forceful action needs to be taken to ensure the State's transition to a truly clean, healthy, socially just and sustainable future.

The real tragedy is that New York has not promoted transition to a clean energy future by adequately investing in the future. Imagine if the more than $7 billion in subsidies provided to the state's aging and uncompetitive upstate nuclear reactors in 2016 had geed dedicated instead toward expanding college clean tech science, design, engineering and architecture studies or providing scholarships to low-income student interested in green energy careers. Imagine also if that $7 billion had been dedicated to revitalizing crumbling school buildings by refurbishing them to be more energy efficient and comfortable or planting thousands of carbon-dioxide absorbing trees on barren school grounds or putting solar panels on every flat-roofed campus building, etc.

The NYPA Should Plan for an Energy Future Without Heavily Polluting, Dangerous Fuel-Based Forms of Power Generation.

The Stone Age did not end for lack of stone, and the Oil Age will end long before the world runs out of oil.

This observation, interestingly, was made by a Saudi Arabian oil minister decades ago. Yet it serves to illustrate an important point.  Energy is largely a product of what is promoted.

We agree with the key argument made by Public Power NY: NYPA must lead the way and build at least 15 GW of renewable energy by 2030. (Public Power NY) We are especially disappointed to note that

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits, as Public PoeIt is highly problematic , in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

(Public Power NY 2024)

NYPA Should Plan for an Energy Future Without Heavily Polluting, Dangerous Fuel-Based Forms of Power Generation.

The Stone Age did not end for lack of stone, and the Oil Age will end long before the world runs out of oil.

This observation, interestingly, was made by a Saudi Arabian oil minister decades ago. Yet it serves to illustrate an important point.  Energy is largely a product of what is promoted.

There is no longer any defensible argument for continuing to prop up extractive toxic forms of power.  The burden they impose – upon the environment, human health, and the climate – is now and will increasingly be untenable.  How many more radiation leaks and chemicals do we want streaming into our water supplies? How much more fission products and micro-particulates do we want our children to draw into their lungs and bloodstreams? How many more nuclear waste dumps, fracking-despoiled lands, Superfund sites, brownfields and hazard zones do we need? How many more cancers and neurological problems and developmental disorders and immune diseases are enough?

New York must cease all manner of support for highly-polluting forms of power.

The NYPA must make the decisions needed and marshal the resources available to accelerate the development of clean renewable energy, distributed generation, and smart end use.

New York Should Accelerate Adoption of and Energy Market Design Support for Renewable, Efficiency, Storage/Battery and Demand-Side Options

New York State is way behind where it needs to be in meeting the goals articulated in the Climate Leadership and Community Protection Act (CLCPA), including the mandate to achieve a 70% renewable energy grid by 2030.

NYPA can be instrumental in stepping up its efforts to support renewable projects already in the pipeline and incentivize the acceleration of renewable energy development and expansion.

Such an effort will obviously include increasing near-term procurement targets. It must also include giving a high priority to efficiency, reducing red tape, building out and increasing access to energy storage, and continued improvements of New York's electric grid's distribution system. There are many ways ideas advanced and smart models for decarbonization can be pulled together under a streamlined, user-friendly schema that is also versatile and adaptable.

We strongly support the points made by Strategen Consulting prepared for the Public Power New York Coalition and urge the NYPA to adopt its recommendations. (Strategen

2023)

The renewable energy revolution is here (Benham 2023; Bond 2024) and New York must act now to harness its power, not only to combat climate change and create a healthier environment, but to ensure the State become a leader in the renewable-based energy ecosystem – that includes finance, and workforce development.

The International Energy Agency's (IEA) Renewables 2024 report, issued in October 2024, finds renewable power capacity expected to surge over the rest of the decade with global additions on course to roughly equal the current total power capacity of China, the EU, India, and the US.  Key findings include:

*Solar PV and wind are now the cheapest options for adding new electricity generation in almost every country.
*By 2026, the IEA projects, wind and solar power generation will both surpass nuclear.
*The world is set to add more than 5,500 GW of new renewable capacity between 2024 and 2030.
*Cumulative renewable capacity is expected to reach almost 9,760 GW in 2030. (This is IEA's 'main case' forecast.)
*Global renewable capacity could reach almost 11,000 GW in 2030. (This is IEA's 'accelerated case' estimation. (In the US, this would require reducing long permitting timelines and stimulating investment in new grid capacity and flexible assets to unlock additional deployment.)
*Renewables are on course to generate close to 50% of the world's electricity (with solar and wind doubling to provide 30%) by 2030.
*Renewable capacity additions will continue to increase every year, reaching almost 940 GW annually by 2030.
*Solar PV and wind combined account for 95% of renewable capacity growth through the end of the decade, due to their growing economic attractiveness in almost all countries.
*Renewables are being deployed so fast that nearly 70 countries are poised to reach or surpass their current renewable targets for 2030.
*Solar PV is forecast to account for 80% of renewable growth by 2030, benefitting from both utility scale and rooftop installations by companies and households. PV will surpass hydropower to become the largest renewable generation source by 2030. ("Adoption accelerates due to declining costs, shorter permitting timelines and widespread social acceptance. Cost-competitiveness and policy support also stimulate the growth of distributed applications among residential and commercial consumers as more households and companies seek to reduce their electricity bills.")
*Global solar manufacturing capacity is expected to surpass 1,100 GW by the end of 2040.
*Despite recent supply chain and macroeconomic challenges, the wind sector is poised for recovery. Compared with 2017-2023, IEA sees the rate of global wind capacity expansion doubling between 2024 and 2030.

(IEA 2024)

IEA forecasts distributed applications (residential, commercial, industrial and off-grid projects) will comprise almost 40% of overall solar PV expansion. “As more policies enable self-consumption and as economic attractiveness increases, more consumers and companies are seeking to reduce their electricity bills by installing small-scale solar PV systems.” (IEA p 33)

IEA anticipates that most countries will be in the later phases of variable renewable integration by 2030 and observes that, besides variable renewable share, phase assessment must look at the specific generation mix (e.g., distributed solar PV, utility-scale solar, offshore/onshore wind); system flexibility across different time scales, and system ability to manage disturbances (e.g., frequency control, system inertia); and factors such as behind-the-meter-storage, changes in load or generation output, demand-response, and interconnection. Modernizing the system necessitates improved strategic planning and reformed regulatory frameworks which properly compensate flexible assets. “Market designs must evolve to support power systems dominated by solar and wind, emphasizing procurement and compensation of system services beyond just energy.” (IEA 2024, pp 113-114)

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Council on Intelligent Energy & Conservation Policy (CIECP) and Promoting Health and Sustainable Energy (PHASE) Comments on NYPA Renewables Strategic Plan

Submitted Via email to:

The Council on Intelligent Energy & Conservation Policy (CIECP) and Promoting Health and Sustainable Energy (PHASE) support pursuit of the projects referenced by the New York Power Authority (NYPA) in the Renewables Strategic Plan.

However, much more coordinated and forceful action needs to be taken to ensure the State’s transition to a truly clean, healthy, socially just and sustainable future.

The real tragedy is that New York has not promoted transition to a clean energy future by adequately investing in the future. Imagine if the more than $7 billion in subsidies provided to the state's aging and uncompetitive upstate nuclear reactors in 2016 had geed dedicated instead toward expanding college clean tech science, design, engineering and architecture studies or providing scholarships to low-income student interested in green energy careers. Imagine also if that $7 billion had been dedicated to revitalizing crumbling school buildings by refurbishing them to be more energy efficient and comfortable or planting thousands of carbon-dioxide absorbing trees on barren school grounds or putting solar panels on every flat-roofed campus building, etc.

The NYPA Should Plan for an Energy Future Without Heavily Polluting, Dangerous Fuel-Based Forms of Power Generation.

The Stone Age did not end for lack of stone, and the Oil Age will end long before the world runs out of oil.

This observation, interestingly, was made by a Saudi Arabian oil minister decades ago. Yet it serves to illustrate an important point.  Energy is largely a product of what is promoted.

We agree with the key argument made by Public Power NY: NYPA must lead the way and build at least 15 GW of renewable energy by 2030. (Public Power NY) We are especially disappointed to note that

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits, as Public PoeIt is highly problematic , in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

(Public Power NY 2024)

There is no longer any defensible argument for continuing to prop up extractive toxic forms of power. The burden they impose – upon the environment, human health, and the climate – is now and will increasingly be untenable. How many more radiation leaks and chemicals do we want streaming into our water supplies? How much more fission products and micro-particulates do we want our children to draw into their lungs and bloodstreams? How many more nuclear waste dumps, fracking-despoiled lands, Superfund sites, brownfields and hazard zones do we need? How many more cancers and neurological problems and developmental disorders and immune diseases are enough?

New York must cease all manner of support for highly-polluting forms of power.

The NYPA must make the decisions needed and marshal the resources available to accelerate the development of clean renewable energy, distributed generation, and smart end use.

New York Should Accelerate Adoption of and Energy Market Design Support for Renewable, Efficiency, Storage/Battery and Demand-Side Options

New York State is way behind where it needs to be in meeting the goals articulated in the Climate Leadership and Community Protection Act (CLCPA), including the mandate to

achieve a 70% renewable energy grid by 2030.

NYPA can be instrumental in stepping up its efforts to support renewable projects already in the pipeline and incentivize the acceleration of renewable energy development and expansion.

Such an effort will obviously include increasing near-term procurement targets. It must also include giving a high priority to efficiency, reducing red tape, building out and increasing access to energy storage, and continued improvements of New York's electric grid's distribution system. There are many ways ideas advanced and smart models for decarbonization can be pulled together under a streamlined, user-friendly schema that is also versatile and adaptable.

We strongly support the points made by Strategen Consulting prepared for the Public Power New York Coalition and urge the NYPA to adopt its recommendations. (Strategen 2023)

The renewable energy revolution is here (Benham 2023; Bond 2024) and New York must act now to harness its power, not only to combat climate change and create a healthier environment, but to ensure the State become a leader in the renewable-based energy ecosystem – that includes finance, and workforce development.

The International Energy Agency's (IEA) Renewables 2024 report, issued in October 2024, finds renewable power capacity expected to surge over the rest of the decade with global additions on course to roughly equal the current total power capacity of China, the EU, India, and the US.  Key findings include:

*Solar PV and wind are now the cheapest options for adding new electricity generation in almost every country.
*By 2026, the IEA projects, wind and solar power generation will both surpass nuclear.
*The world is set to add more than 5,500 GW of new renewable capacity between 2024 and 2030.

*Cumulative renewable capacity is expected to reach almost 9,760 GW in 2030. (This is IEA's 'main case' forecast.)
*Global renewable capacity could reach almost 11,000 GW in 2030. (This is IEA's 'accelerated case' estimation. (In the US, this would require reducing long permitting timelines and stimulating investment in new grid capacity and flexible assets to unlock additional deployment.)
*Renewables are on course to generate close to 50% of the world's electricity (with solar and wind doubling to provide 30%) by 2030.
*Renewable capacity additions will continue to increase every year, reaching almost 940 GW annually by 2030.
*Solar PV and wind combined account for 95% of renewable capacity growth through the end of the decade, due to their growing economic attractiveness in almost all countries.
*Renewables are being deployed so fast that nearly 70 countries are poised to reach or surpass their current renewable targets for 2030.
*Solar PV is forecast to account for 80% of renewable growth by 2030, benefitting from both utility scale and rooftop installations by companies and households. PV will surpass hydropower to become the largest renewable generation source by 2030. ("Adoption accelerates due to declining costs, shorter permitting timelines and widespread social acceptance. Cost-competitiveness and policy support also stimulate the growth of distributed applications among residential and commercial consumers as more households and companies seek to reduce their electricity bills.")
*Global solar manufacturing capacity is expected to surpass 1,100 GW by the end of 2040.
*Despite recent supply chain and macroeconomic challenges, the wind sector is poised for recovery. Compared with 2017-2023, IEA sees the rate of global wind capacity expansion doubling between 2024 and 2030.

(IEA 2024)

IEA forecasts distributed applications (residential, commercial, industrial and off-grid projects) will comprise almost 40% of overall solar PV expansion. "As more policies enable self-consumption and as economic attractiveness increases, more consumers and companies are seeking to reduce their electricity bills by installing small-scale solar PV systems." (IEA p 33)

IEA anticipates that most countries will be in the later phases of variable renewable integration by 2030 and observes that, besides variable renewable share, phase assessment must look at the specific generation mix (e.g., distributed solar PV, utility-scale solar, offshore/onshore wind); system flexibility across different time scales, and system ability to manage disturbances (e.g., frequency control, system inertia); and factors such as behind-the-meter-storage, changes in load or generation output, demand-response, and interconnection. Modernizing the system necessitates improved strategic planning and reformed regulatory frameworks which properly compensate flexible assets. "Market designs must evolve to support power systems dominated by solar and wind, emphasizing procurement and compensation of system services beyond just energy." (IEA 2024, pp 113-114)

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Last Name:** Hoskins

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

To Whom it may concern,

Please accept this note as BXEDC’s comment on NYPA’s proposed Strategic Plan. We appreciate the opportunity to provide you with feedback.

Of the many areas of NYPA’s work named in this plan, BXEDC is particularly supportive of the planned phase-out of fossil fuel generation at NYPA’s small natural gas power plants (SNGPPs) in the Bronx by 2030. We urge NYPA to prioritize projects maximizing community benefits during this transition, including job creation, energy affordability, and robust community engagement.

Job Creation:

We applaud NYPA's investment in workforce development and training programs, such as the Clean Energy Workforce Training solicitation and the NYCHA Clean Energy Academy12. We strongly encourage the expansion of these programs to specifically target Bronx residents, providing them with the skills and opportunities to secure well-paying jobs in the growing renewable energy sector.

Specifically, BXEDC recommends that NYPA:

Partner with local organizations, such as BXEDC, to develop targeted training programs that meet the needs of Bronx residents and employers in the renewable energy industry.

Prioritize the hiring of Bronx residents for construction, operation, and maintenance jobs associated with new renewable energy projects in the borough.

Establish apprenticeship and mentorship programs to provide Bronx residents with on-the-job training and career advancement opportunities.

Energy Affordability:

The Bronx faces a high energy burden, with many residents struggling to afford their electricity bills. As NYPA transitions away from fossil fuels, it is crucial that the resulting energy solutions are affordable and accessible to all Bronx residents.

To address this, BXEDC urges NYPA to:

Prioritize projects in the Bronx that contribute to the REACH program, which aims to provide electric utility bill credits to low-income households in disadvantaged communities. This program is vital to ensuring that the benefits of the clean energy transition reach those who need them most.

Explore innovative financing mechanisms and rate structures that minimize the impact of renewable energy development on electricity rates for Bronx residents.

Community Engagement:

BXEDC strongly advocates for robust community engagement throughout the planning and implementation of clean energy projects in the Bronx. We believe that Bronx residents must have a voice in decisions that impact their communities and their energy future.

Therefore, BXEDC recommends that NYPA:

Conduct early and ongoing outreach to Bronx communities, providing clear and accessible information about proposed projects and their potential impacts.

Establish community advisory boards to provide input on project design, siting, and implementation.

Ensure that community benefits, such as green spaces, community centers, or other amenities, are incorporated into any redevelopment plans for the SNGPP sites.

Best,

Marshall Strawbridge

Dir. of Economic Development

Bronx Economic Development Corporation

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I live in Queens (born and raised!), have asthma, and care a lot about how climate change is already impacting all of us- New Yorkers, people around the globe, our planet and all living things on it. I'm writing to you today to urge you to build sufficient renewable energy to meet the climate crisis.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act (CLCPA) of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority (NYPA) to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable, as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest! Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City, the largest city in this country with over 8 million residents!

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility-scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you for your serious attention to these important matters,
Jessica Bartolini

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Last Name:** Pan

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Your offices now have received in excess of 5000 comments all saying the same thing: we need to build 15 gigawatts of public renewables.

This shouldn't even be a discussion. In both spirit and letter of the law, the Build Public Renewables Act is exquisitely clear in its role of building the renewable energy necessary for New York to transition to a carbon-free grid by 2040 and putting our state on a pathway to a better future.

And if that wasn't clear enough, the immense amount of public support for building public renewables should be. After all, support fo our cause led to electing public power champions, forcing Governor Hochul to pass the bill against her wishes, and having the Senate refuse to even consider Justin Driscoll for the role of NYPA CEO.

We are about to face four years of a climate-denier-in-chief. We are perhaps only a few years away from locking in 2ºC warming globally. The US is by far the biggest contributor to carbon emissions on the planet. New York can absolutely lead the country in a renewable revolution. We did it before in 1931 under Governor FDR, and we can do it today with Governor Hochul. But now is the time. Now is the chance.

We don't get another shot at this. No one is coming to save us. There is no do-overs. The 3.5 gigawatts proposed by Driscoll is not just insufficient, it amounts to nothing when accounting for attrition. 15 gigawatts of actually constructed gigawatts is the floor, not the ceiling. We need to build more and cut down on unnecessary and wasteful emitters like AI, crypto, and other industries that cause more harm than good (Lockheed Martin, anyone?). But it starts with a commitment to building 15 gigawatts today, not tomorrow.

Building 15 gigawatts can create 25,000 union jobs. It can lower energy bills and asthma-causing pollution in Black and brown neighborhoods. It can fight back against the rise of fascism and Trumpism in our state. But NYPA must commit to building the 15 GW now. Not just upstate either. Build it downstate. In NYC and the Hudson Valley. On CUNY campuses. On municipal buildings. From the tip of Staten Island up to Newburgh, and beyond. The people want it. Give us what we demand.

Or we'll find someone who will.

**Comments:** Dear Governor Hochul,

Hope this message finds you well. I™m not the most familiar with the current plan for renewables in NY, but a loved one urged me to read up on what's happening and send this letter.

I™m deeply worried about the way New York is proceeding with renewables strategy so far.  The current plan seems like it will continue to rely on our old peaker plants to provide the surplus in energy NYC in particular needs in the summer.

I™m actually a recent MBA candidate so it's becoming clear to me why strategic goals are set this way, and what the complications migjt be with achieving 15 GW capacity, particularly when trying to balance the financial health of NYC.  But considering the alternatives and the anecdotal (but worrying) reports of people living near these plants, I think we need to come together and make a push to get this done.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

And lastly, I would love to see more excitement in New York City about our ambitious plan to realize 15 GW renewable energy.  I™ll be following this closely and am eager to see NYC lead the way in renewables strategy

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

Governor Hochul, NYSERDA, NYPA:

I am writing as a furious and outraged New Yorker, deeply troubled by the destructive path your energy policies are paving for the hardworking families and businesses of our state. The 2024 New York State Energy Plan and your climate agenda, while cloaked in rhetoric about sustainability and equity, mask the detrimental impact they will have on our middle class, manufacturing industries, and energy affordability. Your actions suggest a stark disconnect between your stated goals and the reality New Yorkers are facing.

Your administration's aggressive push for electrification and decarbonization under the guise of combating climate change is riddled with contradictions. While you promote the banning of natural gas appliances and mandate costly electric vehicle adoption, your policies directly undermine the economic well-being of residents and businesses. The energy plan's substantial rate increases, coupled with your push for congestion pricing in New York City, are more examples of how your administration is taxing working families into submission. These initiatives will not only strain household budgets but also penalize commuters and small businesses, driving economic activity away from our state.

Adding to the harm, your support for offshore wind development is another misguided and costly endeavor. Even developers and the Bureau of Ocean Energy Management (BOEM) admit in their documents that offshore wind projects will not meaningfully impact climate change. These projects are extraordinarily expensive, existing only through taxpayer and ratepayer subsidies, and come at an enormous cost to our environment. Offshore wind turbines threaten marine ecosystems, devastate seafood as a food source,

and put fishermen’s livelihoods at risk. Your promotion of these destructive projects reveals a willingness to sacrifice both economic stability and environmental integrity for political posturing.

Your hypocrisy in this matter is deeply troubling. Consider your support for substantial taxpayer-funded subsidies for the Buffalo Bills’ new stadium. Not only did this deal benefit your husband William Hochul’s former employer, Delaware North, but it also blatantly defies the climate policies you champion. The stadium deal allows vendors to use natural gas—an energy source you are effectively banning for everyday New Yorkers. Such preferential treatment reveals a pattern of double standards, where political allies and corporate interests benefit while ordinary citizens shoulder the burden.

Meanwhile, you echo President Biden’s mandates for widespread electrification without addressing the practical implications for energy costs, grid reliability, or alternative solutions for disadvantaged communities. New York’s ambitious goals, while noble in theory, are being implemented with little regard for their disproportionate economic impact on working families or the feasibility of the infrastructure required.

Governor Hochul, if your true goal is equity and sustainability, why does your administration continue to shift the financial and logistical burden of these changes onto those least able to bear it? The middle class and small businesses are not pawns for political experiments or ambitious soundbites. They deserve pragmatic, balanced policies that protect their livelihoods while moving toward a sustainable future.

Your tenure should prioritize thoughtful leadership, not performative climate gestures that enrich the few while impoverishing the many. I urge you to reconsider your energy policies, halt offshore wind projects, and adopt a balanced approach that supports environmental goals without sacrificing the economic stability of New York’s residents and industries.

Thank you and regards,

Caren Riskin

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

NYSERDA/NYPA/Hochul -

I am writing to express my opposition to the New York State (NYS) energy plan as supported by the Sierra Club, whose advocacy in this matter raises significant concerns about both the integrity of the process and the plan's implications for New Yorkers.

It is crucial to recognize the inherent conflict of interest in Sierra Club's position. The organization has received millions of dollars from Michael Bloomberg's campaign to end fossil fuels, effectively aligning its agenda with an external, well-funded initiative that does not necessarily prioritize the needs of New York residents. This financial backing undermines the credibility of their advocacy and warrants a critical examination of their motives and talking points.

Addressing the Sierra Club's Talking Points:

1.Implement the Scoping Plan's Recommendations, Including Prioritization of Electrification

*The Sierra Club supports rapid electrification without acknowledging its reliance on fossil fuels for electricity generation and the significant risks posed by battery energy storage systems (BESS). These systems are prone to catastrophic failures, including fires and explosions, putting communities at risk. Advocating for electrification without addressing these realities is shortsighted and irresponsible.

2.Incorporate a Limit on GHG Emissions from Gas Use in Buildings

*A limit on greenhouse gas emissions sounds appealing but ignores the practical challenges of transitioning buildings entirely off gas. Modern natural gas systems are efficient

and can serve as a reliable energy source during periods of high demand when renewable energy falls short. Hastily imposing limits risks destabilizing energy reliability.

3.Consider Approaches to Limiting Utility Bills Such as Income-Based Caps and Progressive Rate Designs

*Shifting the financial burden of the energy transition onto the middle class to subsidize utility rates for lower-income households is inequitable and economically unsound. The middle class is already strained, and policies that exacerbate this divide will only deepen economic disparity.

4.Focus on Strategies to Rein in New Energy Load from Data Centers and Cryptocurrency and to More Effectively Manage Existing Load

*While it is prudent to address energy usage in these sectors, the energy plan fails to adequately balance economic growth and energy consumption. These industries provide jobs and economic opportunities that could be stifled under overly restrictive policies.

5.Implement Equity Mandates of the CLCPA: Address Disproportionate Pollution Burdens and Benefits

*Equity mandates are an important consideration, but they must not be used as a smokescreen for impractical or expensive policies that fail to deliver tangible benefits. Effective solutions should address pollution directly without compromising energy reliability or affordability for all residents.

6.Exclude Nuclear Energy from the New Energy Plan

*The blanket exclusion of nuclear energy reveals a bias that has no place in an objective energy strategy. Nuclear energy is a proven, low-carbon technology that provides a stable energy supply. The opposition to nuclear energy appears driven not by safety or feasibility concerns but by a lack of incentives offered by nuclear developers to government officials, which raises ethical questions about policy motivations.

Conclusion

The NYS energy plan, as supported by the Sierra Club, fails to provide a balanced, realistic, and equitable approach to energy transition. Moreover, the organization’s financial ties to anti-fossil fuel campaigns undermine its ability to advocate impartially for the best interests of New Yorkers.

We must pursue a comprehensive energy policy that incorporates a diverse mix of energy sources, including nuclear, natural gas, and renewables, while addressing practical challenges and ensuring fair treatment of all socioeconomic groups.

I urge policymakers to reject the flawed proposals of the NYS energy plan and to consider a more pragmatic, inclusive path forward.

Subject: Sierra Club Advocacy Hour: Follow-up (all of the links)

Hi everyone,

Thank you so much for joining our first Sierra Club Monthly Advocacy Hour last night!

As promised, sending along all of the links that were shared last night. Apologies in advance there were a lot of links last night...

If you have an idea for an advocacy hour topic for us to cover in the future feel free to submit them via this form.
<https://urldefense.com/v3/__https://docs.google.com/forms/d/e/1FAIpQLSc8Yt_T3U0yYT6qAonTkz9NzpKkAJebYBz1vi_KP3OlHctkHg/viewform?vc=0&c=0&w=1&flr=0__;!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtQ6MMrIrA$>

First, RSVP to join us for our upcoming advocacy hours.

* Wednesday January 8th at 6PM: Sierra Club NY Legislative Priorities 2025 RSVP here.

<https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJ0tcO2tqDwpGdKvoy_ZjlswLzw_nBygd34y*/registration__;Iw!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtQa1ANXzA$>

*  Wednesday February 5th at 6PM: Planes, Trains and Boats - Learn more about the crucial legislation which tackles decarbonizing these forms of transportation. RSVP here <https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJwud-6rrT8uE9HXmUQ_jiaJ-D-IjEXM2VGV*/registration__;Iw!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtSkTUDqwg$> .

Submit a comment on the "Draft Scope of the New York State Energy Plan" -

*  You can comment through the Sierra Club link <https://urldefense.com/v3/__https://act.sierraclub.org/actions/National?actionId=AR0490882__;!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtRRPEVUDQ$>

*  OR if you've already submitted a comment through the Sierra Club link you can submit directly on the State website here. <https://urldefense.com/v3/__https://www.commentmanagement.com/comment/State-Energy-Plan-Draft-Scope-Outreach__;!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtTs_9UmfQ$>

(the Sierra Club comments are pre-drafted for you, but we encourage you to add a personal note!)

Here were the main talking points that we shared list night for our comments on the draft scope of the energy plan:

1. Implement the Scoping Plan’s recommendations, including prioritization of electrification.

2. Incorporate a limit on GHG emissions from gas use in buildings

3. Consider approaches to limiting utility bills such as income-based caps and progressive rate designs to help manage the cost of the energy transition.

4. Focus on strategies to rein in new energy load from data centers and cryptocurrency and to more effectively manage existing load.

5. Implement equity mandates of the CLCPA: address disproportionate pollution burdens and benefits.

6. New energy plan cannot include nuclear energy.

Who's in charge of the energy planning process?

https://energyplan.ny.gov/The-Board/Board-Members <https://urldefense.com/v3/__https://energyplan.ny.gov/The-Board/Board-Members__;!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtTwPqmbCw$>

Research spreadsheet linked here. <https://urldefense.com/v3/__https://docs.google.com/spreadsheets/d/1cbYQKw_CYqDBgFuQ1utLkF2d7eDeEJlhwgfE8zPhvh4/edit?gid=0*gid=0__;Iw!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtSnVbHRKg$>

Comment on Clean Path Cancelation:

Governor Contact Form: https://www.governor.ny.gov/content/governor-contact-form <https://urldefense.com/v3/__https://www.governor.ny.gov/content/governor-contact-form__;!!MQuuhw!0kAsd17afl37u4gfJSabvQPJtho1nU6OghY4CWPGH6Rqch7fJP84gvRiIR6sfoqxzh25flJp_vcplnRuESGvn8fvsoIfwtS7IqfZcg$>

Script: My name is (name) and I live in (town/city), New York.

I was disappointed to hear the news that the Clean Path New York transmission line was recently canceled. Completion of the transmission line has always been essential to New York's transition to renewably sourced electricity and to attaining the greenhouse gas emission goals of the Climate Leadership and Community Protection Act (CLCPA.)

I urge you to prioritize the development of transmission lines in New York as part of our clean energy future. Especially transmission lines which are designed to bring much-needed renewable energy into the New York City metro-area.

[Option to add a personal detail about how you've been impacted by the climate crisis and the clean energy transition is important to you.]

Thank you,

[name]

Thanks again!
Ally

**Submit Date:** 12/09/2024 10:10:00 PM

**First Name:** Caryn

**Last Name:** McKechnie

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

I oppose NYS proposed energy plan.

Public comments supporting the CLCPA/scoping plan are rote coming from Sierra Club/Earth justice/NY renews.

State agencies should be listening to all NYS ratepayers.  We do not want to pay for our own demise.  Our health and safety should be taking priority.

Nuclear is the only baseload, energy-dense, carbon-free technology which is ready for deployment now.  A reactor would employ thousands of workers, for the 4 generations of a its life. Nuclear can use reprocessed spent fuel, providing a partial solution to waste storage.  They are doing this in France. Nuclear can be deployed in the timeframe necessary: France and Sweden mostly decarbonized their grids in about 10 years using older technology.  California has spent 20 years, and Germany has spent 30, trying to decarbonize with solar, wind, and batteries. Germany mines and burns coal and electricity there costs twice what the French pay.  California relies on lots of gas, and coal-fired electricity imports --- when they don't arrive the lights go out in LA. CA has the most expensive electricity in the US.  CA shows there is no cost-effective storage solution: with the largest battery on earth California had to dump 3TWh of solar last year -- they could not store it or give it away.

Facts:

*
Sunrise Wind and Empire Wind strike price is 3x current downstate wholesale electricity
*
Comptroller has confirmed ratepayers are funding the infrastructure, subsidies for battery energy storage and turbines; there are no other funds allocated for solar and wind buildout, NO engineering or fiscal analysis
*
The Business Council confirms there are more than one million ratepayers already behind in their bills
*
NYSERDA acknowledges decarb targets will not be met.
*Battery energy storage systems in densely populated communities put our health and safety at risk
*High Voltage EMF cables in our densely populated communities put our health and safety at risk

Power outages and brown outs are already worsening...why are we rushing to an intermittent, not proven safe, expensive form of energy: Battery energy storage and wind

Vineyard wind and Equinor representatives tiptoed into my community straight out lying to community members including myself when asked how much this would cost us, outright lied when they said they've done this before in residential communities, outright lied when they said EMF is safe, at 345kv it is not safe.  The WHO has now categorized EMF as possibly carcinogenic.  We do not want to be monitored after the fact.

NYS will not shut down peaker plants because NYISO is already admitting that the grid is falling short and will not make mandated targets by next year because of canceled wind projects.

Governor Hochul's fire interagency working group is "making it up as they go along."  The studies never produced results of hydrogen fluoride in the air/environment.  This is lying by omission.

We are not dots on a map.  We have our homes and families in these communities for the proposed cables and battery systems.

Legislation is moving much too fast without regard to taxpayer safety.

There is no greater good when risks are imposed on some for the benefit of others

Sincerely,
Michelle Leo
Island Park, NY

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

I  oppose NYS proposed energy plan.

Public comments supporting the CLCPA/scoping plan are rote coming from Sierra Club/Earth justice/NY renews.

State agencies should be listening to all NYS ratepayers.  We do not want to pay for our own demise.  Our health and safety should be taking priority.

Nuclear is the only baseload, energy-dense, carbon-free technology which is ready for deployment now.  A reactor would employ thousands of workers, for the 4 generations of a its life. Nuclear can use reprocessed spent fuel, providing a partial solution to waste storage.  They are doing this in France. Nuclear can be deployed in the timeframe necessary: France and Sweden mostly decarbonized their grids in about 10 years using older technology.  California has spent 20 years, and Germany has spent 30, trying to decarbonize with solar, wind, and batteries. Germany mines and burns coal and electricity there costs twice what the French pay.  California relies on lots of gas, and coal-fired electricity imports --- when they don't arrive the lights go out in LA. CA has the most expensive electricity in the US.  CA shows there is no cost-effective storage solution: with the largest battery on earth California had to dump 3TWh of solar last year -- they could not store it or give it away.

Facts:

*
Sunrise Wind and Empire Wind strike price is 3x current downstate wholesale electricity

*
Comptroller has confirmed ratepayers are funding the infrastructure, subsidies for battery energy storage and turbines; there are no other funds allocated for solar and wind buildout, NO engineering or fiscal analysis
*
The Business Council confirms there are more than one million ratepayers already behind in their bills
*
NYSERDA acknowledges decarb targets will not be met.
*Battery energy storage systems in densely populated communities put our health and safety at risk
*High Voltage EMF cables in our densely populated communities put our health and safety at risk

Power outages and brown outs are already worsening...why are we rushing to an intermittent, not proven safe, expensive form of energy: Battery energy storage and wind

Vineyard wind and Equinor representatives tiptoed into my community straight out lying to community members including myself when asked how much this would cost us, outright lied when they said they've done this before in residential communities, outright lied when they said EMF is safe, at 345kv it is not safe. The WHO has now categorized EMF as possibly carcinogenic. We do not want to be monitored after the fact.

NYS will not shut down peaker plants because NYISO is already admitting that the grid is falling short and will not make mandated targets by next year because of canceled wind projects.

Governor Hochul's fire interagency working group is "making it up as they go along." The studies never produced results of hydrogen fluoride in the air/environment. This is lying by omission.

We are not dots on a map. We have our homes and families in these communities for the proposed cables and battery systems.

Legislation is moving much too fast without regard to taxpayer safety.

There is no greater good when risks are imposed on some for the benefit of others

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Adding a note down here to say, yes this is a form letter, but i believe so strongly in everything written above and i could not word it better myself. I will add that when the Power Authority was remade in mid-20th century, it was don™t at great expense to the public both fiscally and in terms of displacement. Please do not let those sacrifices be in vain by not taking the opportunity in front of us to turn our current system into the system of the future, with its fullest potential!

**Comments:** Thank you Mr. Monahan for continued exposure of the Sierra Club! It is painful to endure the Sierra club gang on calls and platforms that are scripted, not substantive and NEVER FROM REAL RESIDENTS impacted by these projects. The Sierra club's agenda is to protect the environment and wildlife, yet they neglect the destruction of our ocean, marine life, seafood and fisherman jobs by supporting offshore wind. Those Bloomberg donations have incentivized this group to neglect their obligations and the audacity to support harmful renewables that impact REAL RESIDENTS is astounding.

FACT sonar surveying for offshore wind development is harmful to whales and other marine life. Why else would BOEM and developer environmental impact statements request IHA "Incidental Harassment Authorization" which is a request to kill a certain number of whales, dolphins and other precious sea-life.

On Mon, Dec 9, 2024 at 10:04PM Christian Monahan

NYSERDA/NYPA/Hochul -

I am writing to express my opposition to the New York State (NYS) energy plan as supported by the Sierra Club, whose advocacy in this matter raises significant concerns about both the integrity of the process and the plan's implications for New Yorkers.

It is crucial to recognize the inherent conflict of interest in Sierra Club's position. The organization has received millions of dollars from Michael Bloomberg's campaign to end fossil fuels, effectively aligning its agenda with an external, well-funded initiative that does not necessarily prioritize the needs of New York residents. This financial backing undermines the credibility of their advocacy and warrants a critical examination of their motives and talking points.

Addressing the Sierra Club's Talking Points:

1.Implement the Scoping Plan's Recommendations, Including Prioritization of Electrification

*The Sierra Club supports rapid electrification without acknowledging its reliance on fossil fuels for electricity generation and the significant risks posed by battery energy storage systems (BESS). These systems are prone to catastrophic failures, including fires and explosions, putting communities at risk. Advocating for electrification without addressing these realities is shortsighted and irresponsible.

2.Incorporate a Limit on GHG Emissions from Gas Use in Buildings

*A limit on greenhouse gas emissions sounds appealing but ignores the practical challenges of transitioning buildings entirely off gas. Modern natural gas systems are efficient and can serve as a reliable energy source during periods of high demand when renewable energy falls short. Hastily imposing limits risks destabilizing energy reliability.

3.Consider Approaches to Limiting Utility Bills Such as Income-Based Caps and Progressive Rate Designs

*Shifting the financial burden of the energy transition onto the middle class to subsidize utility rates for lower-income households is inequitable and economically unsound. The middle class is already strained, and policies that exacerbate this divide will only deepen economic disparity.

4.Focus on Strategies to Rein in New Energy Load from Data Centers and Cryptocurrency and to More Effectively Manage Existing Load

*While it is prudent to address energy usage in these sectors, the energy plan fails to adequately balance economic growth and energy consumption. These industries provide jobs and economic opportunities that could be stifled under overly restrictive policies.

5.Implement Equity Mandates of the CLCPA: Address Disproportionate Pollution Burdens and Benefits

*Equity mandates are an important consideration, but they must not be used as a smokescreen for impractical or expensive policies that fail to deliver tangible benefits. Effective solutions should address pollution directly without compromising energy reliability or affordability for all residents.

6.Exclude Nuclear Energy from the New Energy Plan

*The blanket exclusion of nuclear energy reveals a bias that has no place in an objective energy strategy. Nuclear energy is a proven, low-carbon technology that provides a stable energy supply. The opposition to nuclear energy appears driven not by safety or feasibility concerns but by a lack of incentives offered by nuclear developers to government officials, which raises ethical questions about policy motivations.

Conclusion

The NYS energy plan, as supported by the Sierra Club, fails to provide a balanced, realistic, and equitable approach to energy transition. Moreover, the organization’s financial ties to anti-fossil fuel campaigns undermine its ability to advocate impartially for the best interests of New Yorkers.

We must pursue a comprehensive energy policy that incorporates a diverse mix of energy sources, including nuclear, natural gas, and renewables, while addressing practical challenges and ensuring fair treatment of all socioeconomic groups.

I urge policymakers to reject the flawed proposals of the NYS energy plan and to consider a more pragmatic, inclusive path forward.

Subject: Sierra Club Advocacy Hour: Follow-up (all of the links)

Hi everyone,

Thank you so much for joining our first Sierra Club Monthly Advocacy Hour last night!

As promised, sending along all of the links that were shared last night. Apologies in advance there were a lot of links last night...

If you have an idea for an advocacy hour topic for us to cover in the future feel free to submit them via this form.
<https://urldefense.com/v3/__https://docs.google.com/forms/d/e/1FAIpQLSc8Yt_T3U0yYT6qAonTkz9NzpKkAJebYBz1vi_KP3OlHctkHg/viewform?vc=0&c=0&w=1&flr=0__;!!M

Quuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcu28RiWY$>

First, RSVP to join us for our upcoming advocacy hours.

* Wednesday January 8th at 6PM: Sierra Club NY Legislative Priorities 2025 RSVP here. <https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJ0tcO2tqDwpGdKvoy_ZjlswLzw_nBygd34y*/registration__;Iw!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfckKMndVw$>

* Wednesday February 5th at 6PM: Planes, Trains and Boats - Learn more about the crucial legislation which tackles decarbonizing these forms of transportation. RSVP here <https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJwud-6rrT8uE9HXmUQ_jiaJ-D-IjEXM2VGV*/registration__;Iw!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcddHbwyU$> .

Submit a comment on the "Draft Scope of the New York State Energy Plan" -

* You can comment through the Sierra Club link <https://urldefense.com/v3/__https://act.sierraclub.org/actions/National?actionId=AR0490882__;!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcwRxbook$>

* OR if you've already submitted a comment through the Sierra Club link you can submit directly on the State website here. <https://urldefense.com/v3/__https://www.commentmanagement.com/comment/State-Energy-Plan-Draft-Scope-Outreach__;!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcgovvqi8$>

(the Sierra Club comments are pre-drafted for you, but we encourage you to add a personal note!)

Here were the main talking points that we shared list night for our comments on the draft scope of the energy plan:

1. Implement the Scoping Plan’s recommendations, including prioritization of electrification.

2. Incorporate a limit on GHG emissions from gas use in buildings

3. Consider approaches to limiting utility bills such as income-based caps and progressive rate designs to help manage the cost of the energy transition.

4. Focus on strategies to rein in new energy load from data centers and cryptocurrency and to more effectively manage existing load.

5. Implement equity mandates of the CLCPA: address disproportionate pollution burdens and benefits.

6. New energy plan cannot include nuclear energy.

Who's in charge of the energy planning process?

https://energyplan.ny.gov/The-Board/Board-Members <https://urldefense.com/v3/__https://energyplan.ny.gov/The-Board/Board-Members__;!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcm3CJmZs$>

Research spreadsheet linked here.

Comment on Clean Path Cancelation:

Governor Contact Form: https://www.governor.ny.gov/content/governor-contact-form <https://urldefense.com/v3/__https://www.governor.ny.gov/content/governor-contact-form__;!!MQuuhw!z0l-1TL5NyqcdqY8dRJE3YiHOSMAFZKarrvATAu7SRRgCuVxNLZMzGuqTDZ-OVYbQdVrNg0hQv24ZbUWzCPeoDfcTR00mgk$>

Script: My name is (name) and I live in (town/city), New York.

I was disappointed to hear the news that the Clean Path New York transmission line was recently canceled. Completion of the transmission line has always been essential to New York's transition to renewably sourced electricity and to attaining the greenhouse gas emission goals of the Climate Leadership and Community Protection Act (CLCPA.)

I urge you to prioritize the development of transmission lines in New York as part of our clean energy future. Especially transmission lines which are designed to bring much-needed renewable energy into the New York City metro-area.

[Option to add a personal detail about how you've been impacted by the climate crisis and the clean energy transition is important to you.]

Thank you,

[name]

Thanks again!
Ally

**Comments:** Governor Hochul,

Your administration's energy policies are causing significant hardship for New York's working families and businesses. The economic consequences of the 2024 Energy Plan, particularly the aggressive push for electrification and the resulting cost increases, are unsustainable. The hypocrisy of subsidizing the Buffalo Bills stadium, which uses natural gas, while simultaneously banning it for everyday citizens, is deeply troubling. This, coupled with the questionable economic and environmental viability of offshore wind projects, demonstrates a concerning disconnect between your stated goals and the reality faced by New Yorkers. A more balanced approach, prioritizing both environmental sustainability and economic stability, is urgently needed.

Sincerely
Patricia  Beaumont

On Monday, December 9, 2024, 9:11 PM, Caren Riskin

Governor Hochul, NYSERDA, NYPA:

I am writing as a furious and outraged New Yorker, deeply troubled by the destructive path your energy policies are paving for the hardworking families and businesses of our state. The 2024 New York State Energy Plan and your climate agenda, while cloaked in rhetoric about sustainability and equity, mask the detrimental impact they will have on our middle class, manufacturing industries, and energy affordability. Your actions suggest a stark disconnect between your stated goals and the reality New Yorkers are facing.

Your administration’s aggressive push for electrification and decarbonization under the guise of combating climate change is riddled with contradictions. While you promote the banning of natural gas appliances and mandate costly electric vehicle adoption, your policies directly undermine the economic well-being of residents and businesses. The energy plan’s substantial rate increases, coupled with your push for congestion pricing in New York City, are more examples of how your administration is taxing working families into submission. These initiatives will not only strain household budgets but also penalize commuters and small businesses, driving economic activity away from our state.

Adding to the harm, your support for offshore wind development is another misguided and costly endeavor. Even developers and the Bureau of Ocean Energy Management (BOEM) admit in their documents that offshore wind projects will not meaningfully impact climate change. These projects are extraordinarily expensive, existing only through taxpayer and ratepayer subsidies, and come at an enormous cost to our environment. Offshore wind turbines threaten marine ecosystems, devastate seafood as a food source, and put fishermen’s livelihoods at risk. Your promotion of these destructive projects reveals a willingness to sacrifice both economic stability and environmental integrity for political posturing.

Your hypocrisy in this matter is deeply troubling. Consider your support for substantial taxpayer-funded subsidies for the Buffalo Bills' new stadium. Not only did this deal benefit your husband William Hochul's former employer, Delaware North, but it also blatantly defies the climate policies you champion. The stadium deal allows vendors to use natural gas—an energy source you are effectively banning for everyday New Yorkers. Such preferential treatment reveals a pattern of double standards, where political allies and corporate interests benefit while ordinary citizens shoulder the burden.

Meanwhile, you echo President Biden's mandates for widespread electrification without addressing the practical implications for energy costs, grid reliability, or alternative solutions for disadvantaged communities. New York's ambitious goals, while noble in theory, are being implemented with little regard for their disproportionate economic impact on working families or the feasibility of the infrastructure required.

Governor Hochul, if your true goal is equity and sustainability, why does your administration continue to shift the financial and logistical burden of these changes onto those least able to bear it? The middle class and small businesses are not pawns for political experiments or ambitious soundbites. They deserve pragmatic, balanced policies that protect their livelihoods while moving toward a sustainable future.

Your tenure should prioritize thoughtful leadership, not performative climate gestures that enrich the few while impoverishing the many. I urge you to reconsider your energy policies, halt offshore wind projects, and adopt a balanced approach that supports environmental goals without sacrificing the economic stability of New York's residents and industries.

Thank you and regards,

Caren Riskin

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** I oppose NYS proposed energy plan.  I demand that NYS abandon the scoping plan and Climate Leadership Community Protection Act in favor of a plan grounded in science and engineering, that does not discriminate against safe, energy-dense, cost-effective, carbon-free base load nuclear power.  We can save our seashores, forests, and farms but only if we abandon the plan Albany is currently pursuing.  Wind, batterty energy storage and solar are expensive and not reliable.

Nuclear is ready to move forward now creating jobs for years to come.

NYISO and NYSERDA have both conceded that we will have grid instability and face shortages as early as next year because there have been no modeled analyses of how the CLCPA will be successful.  NYISO also knows peaker plants will not be shut down, creating still more GHGs.

NYISO was advised by Potomac Advisors not to utilize PropelNY as its not cost-effective and not in the best interests of ratepayers

The Comptroller audited NYSERDA and the PSC and confirmed these agencies are using miscalculations and old data, proving ratepayers are paying for the new infrastructure, battery energy storage, turbines, and solar fields.

Since the Business Council noted the expensive rates to Governor Hochul and NYSERDA, public opposition is growing as multiple indicators show the plan is failing.  We all paid attention last year when the Public Service Commission denied rate increases to Empire Wind 1 and Sunrise Wind and the next day Governor Hochul circumvented the PSC and allowed rate increases.  Governor Hochul did not stop there, she then took away local control from municipalities across NYS with the Rapid Act hidden in the state budget.  Local communities must have the final say in what happens in their communities.

We need a realistic plan, not a mandated ban.

I urge NYS to utilize nuclear energy.

Thank you
Michelle Leo

To: Christian Monahan  Subject: Re: FW: Sierra Club Advocacy Hour: Follow-up (all of the links)

Thank you Mr. Monahan for continued exposure of the Sierra Club! It is painful to endure the Sierra club gang on calls and platforms that are scripted, not substantive and NEVER FROM REAL RESIDENTS impacted by these projects. The Sierra club's agenda is to protect the environment and wildlife, yet they neglect the destruction of our ocean, marine life, seafood and fisherman jobs by supporting offshore wind. Those Bloomberg donations have incentivized this group to neglect their obligations and the audacity to support harmful renewables that impact REAL RESIDENTS is astounding.

FACT sonar surveying for offshore wind development is harmful to whales and other marine life. Why else would BOEM and developer environmental impact statements request IHA "Incidental Harassment Authorization" which is a request to kill a certain number of whales, dolphins and other precious sea-life.

On Mon, Dec 9, 2024 at 10:04PM Christian Monahan

NYSERDA/NYPA/Hochul -

I am writing to express my opposition to the New York State (NYS) energy plan as supported by the Sierra Club, whose advocacy in this matter raises significant concerns about both the integrity of the process and the plan's implications for New Yorkers.

It is crucial to recognize the inherent conflict of interest in Sierra Club's position. The organization has received millions of dollars from Michael Bloomberg's campaign to end fossil fuels, effectively aligning its agenda with an external, well-funded initiative that does not necessarily prioritize the needs of New York residents. This financial backing undermines the credibility of their advocacy and warrants a critical examination of their motives and talking points.

Addressing the Sierra Club's Talking Points:

1.Implement the Scoping Plan's Recommendations, Including Prioritization of Electrification

*The Sierra Club supports rapid electrification without acknowledging its reliance on fossil fuels for electricity generation and the significant risks posed by battery energy storage systems (BESS). These systems are prone to catastrophic failures, including fires and explosions, putting communities at risk. Advocating for electrification without addressing these realities is shortsighted and irresponsible.

2.Incorporate a Limit on GHG Emissions from Gas Use in Buildings

*A limit on greenhouse gas emissions sounds appealing but ignores the practical challenges of transitioning buildings entirely off gas. Modern natural gas systems are efficient and can serve as a reliable energy source during periods of high demand when renewable energy falls short. Hastily imposing limits risks destabilizing energy reliability.

3.Consider Approaches to Limiting Utility Bills Such as Income-Based Caps and Progressive Rate Designs

*Shifting the financial burden of the energy transition onto the middle class to subsidize utility rates for lower-income households is inequitable and economically unsound. The middle class is already strained, and policies that exacerbate this divide will only deepen economic disparity.

4.Focus on Strategies to Rein in New Energy Load from Data Centers and Cryptocurrency and to More Effectively Manage Existing Load

*While it is prudent to address energy usage in these sectors, the energy plan fails to adequately balance economic growth and energy consumption. These industries provide jobs and economic opportunities that could be stifled under overly restrictive policies.

5.Implement Equity Mandates of the CLCPA: Address Disproportionate Pollution Burdens and Benefits

*Equity mandates are an important consideration, but they must not be used as a smokescreen for impractical or expensive policies that fail to deliver tangible benefits. Effective solutions should address pollution directly without compromising energy reliability or affordability for all residents.

6.Exclude Nuclear Energy from the New Energy Plan

*The blanket exclusion of nuclear energy reveals a bias that has no place in an objective energy strategy. Nuclear energy is a proven, low-carbon technology that provides a stable energy supply. The opposition to nuclear energy appears driven not by safety or feasibility concerns but by a lack of incentives offered by nuclear developers to government officials, which raises ethical questions about policy motivations.

Conclusion

The NYS energy plan, as supported by the Sierra Club, fails to provide a balanced, realistic, and equitable approach to energy transition. Moreover, the organization’s financial ties to anti-fossil fuel campaigns undermine its ability to advocate impartially for the best interests of New Yorkers.

We must pursue a comprehensive energy policy that incorporates a diverse mix of energy sources, including nuclear, natural gas, and renewables, while addressing practical challenges and ensuring fair treatment of all socioeconomic groups.

I urge policymakers to reject the flawed proposals of the NYS energy plan and to consider a more pragmatic, inclusive path forward.

Subject: Sierra Club Advocacy Hour: Follow-up (all of the links)

Hi everyone,

Thank you so much for joining our first Sierra Club Monthly Advocacy Hour last night!

As promised, sending along all of the links that were shared last night. Apologies in advance there were a lot of links last night...

If you have an idea for an advocacy hour topic for us to cover in the future feel free to submit them via this form.
<https://urldefense.com/v3/__https://docs.google.com/forms/d/e/1FAIpQLSc8Yt_T3U0yYT6qAonTkz9NzpKkAJebYBz1vi_KP3OlHctkHg/viewform?vc=0&c=0&w=1&flr=0__;!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifLuFiga6$>

First, RSVP to join us for our upcoming advocacy hours.

* Wednesday January 8th at 6PM: Sierra Club NY Legislative Priorities 2025 RSVP here. <https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJ0tcO2tqDwpGdKvoy_ZjlswLzw_nBygd34y*/registration__;Iw!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifFz3s29C$>

* Wednesday February 5th at 6PM: Planes, Trains and Boats - Learn more about the crucial legislation which tackles decarbonizing these forms of transportation. RSVP here <https://urldefense.com/v3/__https://sierraclub.zoom.us/meeting/register/tJwud-6rrT8uE9HXmUQ_jiaJ-D-IjEXM2VGV*/registration__;Iw!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifNJyWYmk$> .

Submit a comment on the "Draft Scope of the New York State Energy Plan" -

* You can comment through the Sierra Club link <https://urldefense.com/v3/__https://act.sierraclub.org/actions/National?actionId=AR0490882__;!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifKrPdHm5$>

* OR if you've already submitted a comment through the Sierra Club link you can submit directly on the State website here. <https://urldefense.com/v3/__https://www.commentmanagement.com/comment/State-Energy-Plan-Draft-Scope-Outreach__;!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifAtiqF4y$>

(the Sierra Club comments are pre-drafted for you, but we encourage you to add a personal note!)

Here were the main talking points that we shared list night for our comments on the draft scope of the energy plan:

1. Implement the Scoping Plan’s recommendations, including prioritization of electrification.

2. Incorporate a limit on GHG emissions from gas use in buildings

3. Consider approaches to limiting utility bills such as income-based caps and progressive rate designs to help manage the cost of the energy transition.

4. Focus on strategies to rein in new energy load from data centers and cryptocurrency and to more effectively manage existing load.

5. Implement equity mandates of the CLCPA: address disproportionate pollution burdens and benefits.

6. New energy plan cannot include nuclear energy.

Who's in charge of the energy planning process?

https://energyplan.ny.gov/The-Board/Board-Members <https://urldefense.com/v3/__https://energyplan.ny.gov/The-Board/Board-Members__;!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifN9deb8y$>

Research spreadsheet linked here. <https://urldefense.com/v3/__https://docs.google.com/spreadsheets/d/1cbYQKw_CYqDBgFuQ1utLkF2d7eDeEJlhwgfE8zPhvh4/edit?gid=0*gid=0__;Iw!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifAJoTnHT$>

Comment on Clean Path Cancelation:

Governor Contact Form: https://www.governor.ny.gov/content/governor-contact-form <https://urldefense.com/v3/__https://www.governor.ny.gov/content/governor-contact-form__;!!MQuuhw!wWv0yu5BntvYiRsU_o_f2eQbTDFQV3A2ohepmdCdNOGsFXlJYfEYOh3q4f0AwnQt1iSSQgHtIm21mz5eZwgifFr4SNOS$>

Script: My name is (name) and I live in (town/city), New York.

I was disappointed to hear the news that the Clean Path New York transmission line was recently canceled. Completion of the transmission line has always been essential to New York's transition to renewably sourced electricity and to attaining the greenhouse gas emission goals of the Climate Leadership and Community Protection Act (CLCPA.)

I urge you to prioritize the development of transmission lines in New York as part of our clean energy future. Especially transmission lines which are designed to bring much-needed renewable energy into the New York City metro-area.

[Option to add a personal detail about how you've been impacted by the climate crisis and the clean energy transition is important to you.]

Thank you,

[name]

Thanks again!
Ally

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Elise

**Last Name:** Reynolds

**Comments:** I grew up in the Finger Lakes and now call Brooklyn home”two extremes of New York State's vast beauty, both at risk as the climate crisis deepens due to greed & inaction. Every year that passes without decisive action, lives are lost and environments are destroyed.

With the Build Public Renewables Act, first of its kind energy legislation, New York has an opportunity to serve as a national model of decisive action toward clean energy and live up to the climate goals mandated by the Climate Leadership and Community Protection Act of 2019 (70% renewable electricity by 2030 and 100% by 2040). NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, I echo the concerns with the draft strategic plan outlined by Public Power New York and partners:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:
— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

The futures of every New Yorker, present and future, are in your hands. Act now, starting with a plan for 15 GW of renewable energy by 2030.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **First Name:** Dustin

**Last Name:** Belsha

**Comments:** Hello, my name is Dustin and I live in Crown Heights, Brooklyn. I'm writing in support of the call to NYPA to build 15 gigawatts of renewable energy. As a member of Gen Z, the issue of climate change is very close to my heart. This is not an abstract concern, but a real fear of the real effects that climate change will have on myself, my friends, and my future family. My generation will suffer the consequences of soaring temperatures, increased natural disasters, and changes to the economy like skyrocketing home insurance costs. Building 15 GW of renewables here in New York is not the end-all be-all of addressing the climate crisis, but it is an excellent and absolutely necessary first step.

In addition, I love that building 15 GW of renewable energy will create so many jobs. And not just any jobs, but good union jobs. I have been a proud member of IATSE, the filmworkers union, and I've seen first-hand the union difference in creating good jobs and decent lives for working class people. I have many friends who are union members and will benefit directly from the construction created by building 15 GW, including in IBEW, the Teamsters, and the Operating Engineers. This huge increase in good union construction jobs will help ensure New York remains a place where working class people can provide for their families and lead decent lives.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City
