**Comments:**
Greetings,

Clean Air requests that, at a minimum, a public hearing date be added to the calendar for NYPA's Renewables Strategic Plan in the City of Buffalo. Similarly, while Lewiston is closer to Niagara Falls than Buffalo is, a hearing should be held within the city of Niagara Falls proper.

The Niagara Power Vista, while a convenient location for NYPA staff, is not accessible by public transportation or other means of transportation other than personal vehicles. Buffalo is the largest population center in upstate New York, as well as the largest one in Western New York, and one in three households does possess a car.

If NYPA is genuinely interested in engaging residents of WNY on this topic, then hearings must be held in locations which the general public can easily access, or NYPA should plan to offer a shuttle service from the City of Buffalo and from downtown Niagara Falls.

If NYPA would appreciate recommendations for locations to hold a hearing, we strongly recommend the Central Library (https://www.buffalolib.org/locations-hours/central-downtown-buffalo <https://urldefense.com/v3/__https://www.buffalolib.org/locations-hours/central-downtown-buffalo__;!!MQuuhw!1M_36aVFpntRCKHDcIrQZXdf52u1_7FX4CL-2ozbYVcI49-zxtvipWtoLzrClKERI4y1oJkLBOVh6bjcp-9y-mI9aaU$> ) which is a standard location for statewide public hearings. Likewise, the auditorium at the Earl Brydges Main Library in downtown Niagara Falls (https://www.niagarafallspubliclib.org/services/room_reservations.php <https://urldefense.com/v3/__https://www.niagarafallspubliclib.org/services/room_reservations.php__;!!MQuuhw!1M_36aVFpntRCKHDcIrQZXdf52u1_7FX4CL-2ozbYVcI49-zxtvipWtoLzrClKERI4y1oJkLBOVh6bjcp-9yVnP4YEU$> ) is an excellent location for public hearings.

Thank you for your consideration on this topic,

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I live in New York City and see the effects of our broken energy system every day. Many of my friends have asthma from extreme air pollution. Our energy bills are more unaffordable every year. And New York is extremely vulnerable to increasingly dangerous climate events, from wildfire smoke to flooding to heat emergencies. We need state leaders to move us off fossil fuels as soon as humanly possible.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables

is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** My daughter lives in Maine and my brother lives in FL.  Both had to use generators last week because their power was out and there was so much damage from extreme weather induced by conditions exacerbated by climate change.  Obviously they don't live in NY, but we are all connected by climate change. You have the power to influence this situation. I'm asking you to use it! Let NYPA do its job and build 15 GW by 2030.  Did you know that Pakistan built 13 GW in 6 months? We can do this! Here's the details below, but I wanted to tell you my own personal thoughts as well.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**First Name:** Mark

**Last Name:** Pezzati

**Comments:** I write with concerns that New York State is falling behind on its climate goals mandated by the Climate Leadership and Community Protection Act of 2019 (CLCPA).

As you know, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040.

Unfortunately NYPA's draft strategic plan for renewables only proposes to build a mere 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and the desires of a large majority of New Yorkers. At the same time NYPA's peaker plants must be shut down by 2030 as required by law.

To address these shortcomings in the draft strategic plan, the following revisions must be made:
— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you in advance for doing the right thing by acting in the best interests of all New Yorkers.

**Comments:** Dear Governor Hochul,

My name is David Katz, I'm 22 years old, and I live in Chappaqua, NY. As a child I enjoyed snowy winters, crisp falls, and mild summers. In my short lifetime, I have watched this balanced climate bleed into unpredictable swings of dry heat, humid slog, and tepid cold. From 2022 to 2023, New York City went 700 days with less than an inch of accumulated snow. These are just the simple but profound sacrifices that have been made for me in a warming world. Not anymore.

New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I'm a Bed-Stuy resident who has been impacted by high energy bills. This past winter and summer, my bills have gone as high as $400 for my 3 BR apartment. Split with roommates this is hard but not impossible, but I can only imagine the strain this would place on a family. BPRA passed, you have the power to help ease the financial stress, give us cleaner air, bring good union jobs to New Yorkers, and carry New York City into the 21st century and show the world what a city taking climate change seriously looks like. Instead you have stymied these efforts at every turn. Please, PLEASE do the right thing for the future of New York City and take the damn credit!!

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Governor Hochul,

As we confront the increasing frequency of hurricanes and climate disasters, New York must act swiftly to meet its climate goals mandated by the Climate Leadership and Community Protection Act (CLCPA) of 2019. The Build Public Renewables Act (BPRA) was passed to empower the New York Power Authority (NYPA) to build the public renewable energy infrastructure needed to achieve 70% renewable electricity by 2030 and 100% by 2040.

However, NYPA's current draft strategic plan falls far short, proposing just 3.5 GW of renewables”well below the 15 GW needed by 2030 to meet these goals. Even worse, NYPA admits many of these projects may not be completed.

This is unacceptable. To meet the CLCPA targets, NYPA must lead the charge by building at least 15 GW of public renewable energy, as demanded by the NY State AFL-CIO,

Building Trades Council, and thousands of New Yorkers.

The draft plan also has several other critical shortcomings:

* Geographic imbalance: There are few projects planned for downstate New York and the Hudson Valley, where electricity demand is highest. These communities deserve the benefits of reduced pollution, green jobs, and lower utility bills.

* Failure to phase out peaker plants: The plan does not provide a detailed strategy to shut down NYPA's peaker plants by 2030, as required by law. These plants are a public health disaster for already overburdened communities.

* Lack of public land use: Only 6% of the proposed capacity is sited on public land. More public institutions, like SUNY and CUNY, should benefit from decarbonization projects.

* Neglect of labor input: The draft plan overlooks feedback from key labor organizations. Unions representing 2.5 million workers call for a buildout of at least 15 GW by 2030 to ensure job stability and a just transition.

* Economic imbalance: NYPA's financial plan doesn™t consider redirecting economic development funds from corporate discounts to renewable projects or lowering New Yorkers' rising energy bills.

* Vague project details: The draft lacks specifics on project locations, costs, and timelines, making it impossible to fully assess its feasibility.

* Inadequate public hearings: Only one hearing is scheduled for all of New York City, with none in Central New York or the North Country. More public input is needed.
To address these issues, I urge you to revise NYPA's plan by:

* Increasing total renewable capacity to at least 15 GW.

* Planning the phaseout of all NYPA peaker plants by 2030.

* Allocating at least 5 GW for downstate and the Hudson Valley, with a focus on distributed energy resources.

* Expanding projects with public institutions like SUNY and CUNY.

* Ensuring renewable projects create and sustain green union jobs.

* Redirecting funds from large corporations to public renewables.

* Adding public hearings in Central New York, the North Country, and other boroughs of New York City.

New York has always been a global leader. By building 15 GW of public renewable energy, we can address the climate crisis, create thousands of good jobs, and ensure a sustainable, thriving future for generations to come.

Thank you for your leadership on this critical issue.

Sincerely,

Christopher Toia

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**
Reading about this, I was very frustrated to see arguments against using NYPA's bonding authority. Yes, you need to use that to invest in things we need as a society ” even if they don™t have the rate of return private investors desire! That's what fiscal power is for!

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

**Comments:** As the world faces disastrous climate change, New York is falling behind on its benchmarks mandated by the Climate Leadership and Community Protection Act of 2019. The Build Public Renewables Act was passed to direct the New York Power Authority to build enough public renewables to meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. However, NYPA's most recent draft plan for renewables is unacceptable. The draft proposes to build only 3.5 GW, which is insufficient to meet CLCPA goals. NYPA itsefl has admitted it is likely that the majority of these projects will never get built.

NYPA must build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City.

And one more thing:  Real Climate Solutions are NOT Radioactive!

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. **First Name:** Amelia

**Last Name:** Harnish

**Comments:** My name is Amelia Harnish. I live in Columbia County, NY, and I am doing everything I personally can to contribute to a green future. I installed solar on my first home and switch from oil to electric heat pumps. I've benefitted greatly from NYSERDA programs to build my green home dreams! Yet still, my energy costs during the winter are through the roof. With a 12kwh solar system and heat pumps my heating bills were still upwards of $2000 last winter- and of course I also owe on my loans for my efficient

equipment. I'm privileged. Many New Yorkers are not. In addition, individual actions aren't enough. We must do more to stave off climate crisis.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. — Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Sincerely,
Rita O'Sullivan.

**Comments:** I am a constituent who is passionate about fighting the climate crisis and building a green New York for future generations. We are facing extreme weather around the world and right here in New York City, and we worked tirelessly to pass the necessary legislation to scale up clean energy production. And yet the draft strategic plan from NYPA will not get us there.

It falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. — In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** The current NYPA draft plan is not sufficient. We need the Build Public Renewables Act, which goes much further. This is what we should do:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Climate change is getting worse. What is being planned isn't even a half-measure

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I traveled to Albany to lobby for the Build Public Renewables Act--to talk with my representatives about the climate crisis we are in the middle of. I told them about my son who is a humanitarian worker who deals with the effects of the climate emergency all over the world, and my other son who lives in an area threatened by wildfires. His friends, in a small town outside Asheville, NC have lost everything. The town is demolished. So the climate emergency is real to me. In addition, I've recently become a grandmother and that has made everything all the more urgent. So urgent that I recently spoke at a rally outside the NYPA office in White Plains.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

**Comments:** As a homeowner subjected to the outrageous rates imposed by PSEG, I am very interested in any projects that will lower electricity costs for consumers. Residents of Long Island have been under the weight of exorbitant electricity costs since the 1940s, and it is high time we got some relief. Therefore, I am urging you to build the 15 GW of public renewable energy by 2030. It would be so nice if I could save some money on electricity in my later years.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to

build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Mr. Driscoll,

I am a mother of two young children living in Manhattan. Although my family is far from the most affected by our changing climate, my daughter wasn't allowed to play outside the day she 'graduated' from preschool because the air was so thick with wildfire smoke. A few months later, I carried her home from one of her early kindergarten days on piggyback as a rain bomb dumped water all over the city. (Later that day, I found much of my bedroom ruined by water damage.) Now she is in first grade, and I have been wondering what disaster will strike next.

As the climate crisis bears down on us, New York has the opportunity to lead a just transition away from fossil fuels. But it is falling far behind on the climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To help address this unnecessary and harmful delay, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Instead, NYPA's draft strategic plan for renewables unacceptably proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by

NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Hello NYPA CEO Driscoll,

I'm a new entrepreneur in New York City. I started my small business two years ago. Rising costs for electricity are adding to my overhead along with the skyrocketing inflation in every sector, it makes it harder for people to start and succeed in new businesses. I'm an architect trying to specify sustainable materials, and aiming to meet the AIA 2030 goals to fight climate change. The citizens of New York need you to fight your hardest, to be bold, and to build at minimum 15 GW of renewable energy by 2030. As a constituent of Governor Hochul I expect her and the NYPA to follow the law, and follow through with the promises of the Climate Leadership and Community Protection Act in a way that will benefit New Yorkers. Look to the example California is setting in investing heavily in multiple renewable energy strategies. Make use of the funds from the national Infrastructure bill.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Plan additional projects in conjunction with public institutions such as the State University of New York and the City University of New York.
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Kim

**Last Name:** Fraczek

**Comments:** Dear Governor Hochul and NYPA President Driscoll,

My name is Kim Fraczek. I have been a politically active New York resident for 25 years. I grew up in Pennsylvania, where people I love cannot drink or bathe their children in water that comes from their tap because of fracking. New York has such a POWERFUL opportunity to do things right. My motto is that NYPA CAN DO ANYTHING! Please, let's inspire that work ethic to get us on track to meet our 2030 goals. We can do it!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

**Comments:** I'm a resident of New Paltz, and an active Democrat who strongly supported your election as Governor. But I'm deeply dissatisfied with the high rates and poor performance of Central Hudson, our power utility, the continued reliance on dirty fossil fuel. I'm convinced we need to greatly increase renewable electricity in New York, as mandated by the Climate Leadership and Community Protection Act of 2019 and the Build Public Renewables Act.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the CLCP. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I HELPED START THE AGGREGATION FOR CITY OF ROCHESTER GETTING 100% RENEWABLES. WE NEED MORE RENEWABLES TO SUPPLY THE GROWING DEMAND.  As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** IN this time of unprecedented weather events, hurricanes, floods, and excessive record breaking heat across the state and our nation and across the globe, NY State is falling behind on our climate correcting goals, goals intended to reduce the damages and save lives. IN addition, these goals are not mandated by the Climate Leadership and Community Protection Act (CLCPA) of 2019.

Since the passing and signing of the CLCPA, New York passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. But NYPA's draft strategic plan for renewables calls for building only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built. This is totally off the mark.

To meet CLCPA goals, NYPA must build at least 15 GW of renewable energy by 2030, not have it planned but actually build it. This would also be in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**
WE ARE BEGGING YOU TO TAKE THE INITIATIVE FOR CHANGE WE NEED, NOW!
As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Last Name:** Abbot

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As a teacher of physics and climate science to students in Manhattan, I have read some of the worst projections for unchecked climate change, as well as the local effects of air pollution on our most marginalized communities. Time and again, our legislature and you have established that this is a crisis and that we need to lead the country and the world to reduce the ongoing damages. The CLCPA and BPRA gave you the tools to build our way out of New York's culpability for this crisis, but we need to act with the urgency to match those laws and the demands for clean energy made by our people and the physics of the situation. Please build 15 GW of public renewables by 2030 and help public schools like mine, which is run by Hunter College, to use electrical appliances fed by this clean energy, so we stop doing direct harm to the local community and the globe.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. — There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

**Comments:** I am a graduate of Brooklyn College and am lucky to have been able to have the advantages that this fine public institution offers. While I had wonderful professors and great support, Brooklyn College, like so much of the CUNY system, is physically pretty derelict in a lot of ways. In winter the heating is really uneven and it's surprising to see so many inefficient window air conditioners once it gets hot. I am sure that Brooklyn College spends much more on energy than it should. I am not surprised that it is one of the 15 worst greenhouse gas polluters of all state-owned properties state-wide. Investments in renewable energy at Brooklyn College is the kind of practical solutions that benefit ordinary people that NYS should be doing.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. — The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** _____

_____

Applicable NYPA representative(s),

Below and attached is the American Lung Association’s public comment submission toward your current draft strategic planning involving the fulfillment of “Build Public Renewables.” If you have any questions, please let me know. Thank you.

October 28th, 2024

Applicable NYPA Representative(s),

My name is Max Micallef and I’m the NYS Advocacy Manager – Clean Air Initiatives with the American Lung Association. The combustion of fossil fuel for energy production, including nonrenewable utilities usage, continues to be a great contributor to negative health outcomes throughout the State due to the air pollution these sources cause. This includes COPD, asthma, and lung cancer. With this public comment submission, we would like to provide further information toward your decision-making regarding your current “Build Public Renewables” draft strategic planning.

To meet the goals of New York State’s Climate Leadership and Community Protection Act (CLCPA), New York State must build at least 15 GW of renewable energy by 2030. The Hudson Valley and Downstate New York currently hold the greatest electrical need. These areas need at least 5 GW, with more attention to distributed energy resources, so these areas’ communities can fully experience the creation of green jobs, reduced utility bills, and reduced pollution that Build Public Renewables entails. With this, firm and reasonable timelines regionally are an important way to let the public know when CLCPA goals will be met; especially for our Upstate communities.

It is also important that our institutions, such as our State and City universities, benefit from the decarbonization plans of Build Public Renewables. By making sure the health of our students and educators are pushed to the forefront, it is crucial that economic development funds are centered directly toward renewable energy development for them.

To protect the lung health of all New Yorkers, we must make sure we aim toward fulfilling the full capacity Build Public Renewables holds. We hope you consider the above toward your strategic planning in fulfilling Build Public Renewables, and therefore CLCPA goals.

Thank you.

Max Micallef (any pronouns)

NYS Advocacy Manager - Clean Air Initiatives

**Last Name:** Paul

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects.

Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Tyler Brechner

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
- Redirect economic development funds from large corporations and towards renewable energy development.
- Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Last Name:** DErrico

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** New York can be a champion in the climate crisis by meeting the goals of the Climate Leadership and Community Protection Act of 2019 targets. New York State is falling behind on those climate goals mandated by the CLCPA. New Yorkers passed the Build Public Renewables Act, redirecting the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables proposes to only build 3.5 GW falling FAR short of the CLCPA goals. NYPA also admits it is unlikely that the majority of these projects will ever be built. So that leaves *less than* 3.5 GW of potential renewable energy infrastructure built - totally unacceptable to me, a NYS tax payer and early adopter of renewables (my home has been netzero for 10 years, this year!)

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables

is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities

should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

I am a climate scientist, new mother, and life long New Yorker. I am proud of the work my state did on the CLCPA and we need to stand by it and ensure it becomes a reality.

We already expressed the will of New York to pass the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this

information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA’s peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA’s financial situation, the draft does not consider the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As a retiree living on Long Island, I am faced with some of the highest energy bills in the country. It's hard for me to cough up so much money for basic energy costs on a fixed income.  As a citizen concerned about the environment, I have always been in favor of renewable and sustainable energy sources, which also tend to be more efficient and save people money.  At this time, New York State has an opportunity to help its citizens by acting on the Build Renewables Act, which could make a huge difference for our citizens and the environment.
