— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thank you,

---

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. On a personal note, I've been a teacher in the NYC public schools since 1988. I continue to work part time in the schools because I love working with young people and I am concerned about their futures. I feel personally responsible to work for a better world for them, their children and all the children of the world. For this reason, we must address the climate crisis in real ways. One way is to comply with this law. Please, Governor Hochul, do this! Thank you!

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Zacharias

**Last Name:** Panayotopoulos

**Comments:** Hello Governor Kathleen C. Hochul and NYPA CEO Justin Driscoll,

My name is Zacharias Panayotopoulos and I live in Brooklyn, NY. I'm writing to you today to push for a vision of New York that is fully invested in its future. This means understanding that fighting climate change in New York is as much of an economic issue as it is an environmental and humanitarian issue.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

**Comments:**
Hello,

My name is Ash Croce and I am a New Yorker living in Brooklyn.

One of biggest dreams is to be able to raise children in the city. That is not going to be possible if utility bills keep going up and if we keep destroying our environment. I am terrified that I will not be able to be a mother in the city if the climate crisis keeps accelerating.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am a retired union member and I know what a good union job to make one's life better and more fulfilling.  I also know that we gain at the bargaining can be eaten by increasing costs of a lot of every day items such as energy.  Unlike many other states we have the New York Power Authority which could be providing us with cheaper public power instead of Con Ed.  New York State has set ambitious climate goals with the CLCPA, the NYPA could build publicly owner renewable energy and provide thousands of good union jobs like the one I had.  It could bring us to achieving our climate goals.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

**Comments:** Before the DSA-presented text begins, I'll state that the climate crisis is the #1 topic on the minds of New Yorkers and the young voting block. It is the sword that hangs over our heads, that keeps us from having kids, that curdles us into despair.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Sincerely,
Michael Cooney

**Comments:** I am going to post the Public Power NY text below, but I'm going to add my own $.02 here. I am a taxpaying lifelong Brooklyn resident. I love this city. Hell I love this state, I travel frequently to the hudson valley, finger lakes, went to Niagra a decade ago. I have roots here. I have a kid here. I supported BPRA. I want my kid to breathe clean air. I want to die knowing that the sea won't eat her inheritance. We gave you a law. IMPLEMENT IT.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for

the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

**Comments:** Governor and whomever else this may concern.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** We are writing to demand that the:
New York Power Authority dramatically increase their production of renewable energy to at least 15 gigawatts.
NYPA produce at least 25,000 union jobs and apprentice programs to build out renewable energy in NYS.
NYPA decarbonize public schools and universities in NYS.
NYPA further address environmental injustices by increasing support for NYPA's REACH program which gives bill relief to low-income households in NYS.

**Comments:** Dear NYPA,

I understand public renewables is a complex issue with multiple perspectives but, frankly, New York cannot afford to build anything less than 15GW to meet its climate goals. 3.5 GW is not nearly enough.

I truly hope Mr. Driscoll and Governor Hochul are prioritizing the long-term health of New York citizens, not industry stakeholders concerned about profits, citizens complaining about disrupted views, and certainly not politicians worried about getting re-elected. Public servants answer to citizens, not industry, and we all know industry is concerned with one thing - profits, short-term first and long-term second. Our air, water and land should take precedence over any politician's job and any energy industry corporation's gripes.

We are experiencing wildfires and drought and science tells us we've already baked in a minimum of 1.5 degrees. 20% (3.5GW) of the minimum (15GW) is just what came up the most recent COP: 300 billion from developing countries instead of the estimated 1.3 trillion/year. We will only see more destruction, more pollution, more disease and it will only get more expensive the longer industry and industry-dependent politicians roadblock and footdrag policies to improve 99% of New Yorkers' lives.

NYPA must build at least 15 GW of renewables by 2030 to ensure New York meets its legally mandated climate goals. Nothing less.

**Comments:** Dear Governor Hochul, I am writing in opposition of the Palmer Capitol Project (Maple Harvest) proposed in the Southern Hills of Otisco, Tully and Lafayette NY. I and the majority of residents believe these wind turbines can be more harmful than good, the disruption of land, displacement of natural wildlife, access roads on unstable land and more geological reasons.  Our local area won't benefit if these are put up, we won't get any energy bills decreased. These turbines are not environmentally friendly and our towns oppose them.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Comments:** As a lifelong New Yorker, I have been amazed with how it has advanced and continues to be the Greatest City in the World. But there is still more to be done. We are bursting with creativity, and that should also extend with policy and how we address the ever-encroaching climate crisis.

We have already seen unprecedented hurricanes and climate devastation across the globe, and now New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. New York is never behind anything”we are trendsetters. This isn't like us!

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Gov Hochul,

You can be a leader on this.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** Hi Governor Hochul,

I didn't grow up in New York. In fact, I never thought I would live here until I started dating the man who recently became my husband. I had to work incredibly hard to get into CUNY from my position at South Dakota State University, and I'm so happy to tell you that I started my PhD in Earth and Environmental Science at the CUNY Graduate Center this year.

I thought that I'd left climate change denial behind me when I left South Dakota, but I'm disappointed to see that it's alive and well here in New York. I was also disappointed

when you refused to implement congestion pricing, which would de-incentivize driving and provide extra money to our public transportation system, which is the best in the country but needs a great deal of maintenance and expansion. It's not too late to change your mind and give the MTA the funds it needs, but that's not what I'd like to talk to you about today.

One thing New York has that South Dakota doesn't is NYPA: not just a public power authority, but the largest public power authority in the country. NYPA sets the standard; it is the blueprint for power suppliers across the nation to follow. Why aren't we investing in renewable energy sources at the rate that you yourself have pledged to? I don't need to tell you that the devastating impacts of climate change are only getting worse - power outages, pollution from peaker plants, floods, droughts, climate refugees and more are just a few of the challenges that New York City is currently facing.

I'm studying how to mitigate urban flooding, but I need you to meet me halfway. Please, build fifteen gigawatts of renewable power so that I can continue my work.

Reach out to me at my CUNY email address if you'd like to discuss this further. I want to help.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate

Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** The catastrophic storms that have been ravaging America & the rest of the world are but a precursor to what is coming in our future as the planet continues to heat up.
Our next President clearly had no intention of leading the charge to reduce greenhouse gas emissions, so we need you to carry the flashlight (because a "torch" would be off-brand here).
Start with building the 15 GW of public wind & solar generation to help us meet the Climate Leadership and Community Protection Act of 2019 targets of 70% renewable electricity by 2030, and 100% by 2040.
These investments need to be equitably distributed throughout the State, & specifics of the plan require approval by organized Labor such as the AFL-CIO, Building Trades

Council, & especially IBEW who will be affected the most directly by these changes & have invaluable technical experience & expertise in all things electrical.
Public hearings are also essential, to ensure buy-in from everyone opportunities for accountability.
When beach front property owners complain about offshore wind ruining their views, come back with the economic value they will bring to the Town they're in, & pressure local government to impose that much as a special beachfront property tax to make up for the losses, plus at least 50% for the ecological damage.
When you can show the People a lower power bill in the mail every month, that will more than make up for any backlash from the wealthy donating extra to the Republican candidate next election, but only if you hurry & get them operational before then!

It's not enough for green power to grow as fast as our power needs - we need to go FASTER, so that our dirtiest generators can be decommissioned, to REDUCE emissions, not just slow their growth.

The key steps to achieve these essential goals & do our part to keep NYC & Long Island above sea level:
— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Andrew

**Last Name:** Rudd

**Comments:** New York State is falling inexcusably far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019.

NYPA's draft strategic plan for renewables is frankly pathetic, with only 3.5 GW of renewable energy proposed to be built by 2030 rather than the 15 GW we clearly need. And yet, tragically, the NYPA has cynically leaked that it doesn™t believe a majority of even these few projects will ever get built.

To meet CLCPA goals NYPA must find its moral compass and spine and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity, the draft strategic plan falls short in other ways:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity and jobs demand is greatest and pollution is highest.
— There is no detailed plan for shutting down NYPA's peaker plants (a public health disaster) by 2030 as required by law.
— Less than 6% of proposed capacity is to be sited on public land or institution”totally perverse in light of its purpose!
— It doesn™t incorporate feedback from labor organizations such as the AFL-CIO and Building Trades Council, who together represent 2.5 million workers in NYS.
— It doesn™t consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations”perverse!

— There are no plans or timelines to partner with communities to develop distributed energy resources.
— It doesn™t indicate where projects will be sited nor their estimated cost, making it IMPOSSIBLE to provide complete feedback.

To address these unconscionable shortcomings, I urge you to make the following revisions:

— Increase total planned capacity to 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York
— Decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses
— Ensure enough capacity is built to create and SUSTAIN a pipeline of green union jobs
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York and the four other boroughs of New York City.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

**Comments:** I am a resident of Greenpoint, Brooklyn and have lived in the borough for over 5 years. I strongly urge you to emphatically support the goals and requirements of the CLCPA. I am personally facing rising utility costs, and having been raised in the nearby Appalachian region I am all too familiar with the disastrous consequences that flow from ignoring the climate crisis. NYPA needs to build 15 GW of public renewables by 2030 to alleviate financial and public health burdens on vulnerable New Yorkers. In light of the recent presidential election, accelerated climate action is more necessary than ever before.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit

from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Comments:** I have a few thoughts about the current plan. The plan only mentions geothermal in the context of heating, but next gen geothermal tech coming up, from companies like Fervo, ClearPath or Quaise, show promise even in geologically less active areas. This is tech that could easily be set up by retrofitting existing gas power plants and use labor from fossil fuel industries (Just transition). I urge you to collaborate with NYSERDA and use this fateful timing to work with next gen geothermal companies and make public clean energy as widespread as possible.

**Comments:** You are faced with a simple question: Do you care about the health of the people of New York and the future of the habitability of this planet? If so, comply with the law and build 15 gigawatts of new, publicly owned renewables by 2030.

I am sure you™ll can find many excuses to not comply with the law and to continue polluting our air and water. However, it is equally clear that we could easily build substantial new publicly owned renewables with the will to do so.

The law and constitution of this state require immediate action to reach this eminently attainable goal.

**Comments:** NY law obligates you, as the governor, to push us towards a sustainable green energy grid. The current plan does not get us to our targets, and this failure is unacceptable. It is already too late to prevent some of the effects of climate change, and more delay means more destruction. Notably, there is nowhere on earth safe from climate change.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** _____

_____

The new Build Public Renewables Act, passed as part of New York's annual budget, I think the questionable history of this bill tells a story? The law had been introduced — and failed to pass — the last two consecutive years before finally passing this year. Although I & the Renewable energy coalition have a similar vision to Sarhana, possibly brought to fore when former governor Cuomo said "I'm as serious as a heart attack" when threatening  multiple NY monopoly utilities with cancellation of their operating contract. Having the NYISO Recently say we have to keep the peaker plants and dirty downstate base load plants running for another two years is unacceptable.

The NYPA statement "NYPA will cease fossil fuel generation at its small natural gas power plants by the end of 2030, so long as electric system reliability and environmental conditions allow. JUST DOSN'T CUT IT. Too many (unfulfilled) open ended promises have been put forward starting with we will have 30% renewable energy on the grid by 2016 (starting with 19% hydro and other existing assets) never even came close to success. We in fact testified before the State Assembly/Senate joint hearings in South Hampton threatening PSEG LI with an early contract cancellations and turning LIPA into a MUNI. Resulting in the exit of Tom Falcone & entrance of John Rhodes as CEO…

The promises have to end and the plan for 100% renewable energy has to ensue now, state wide. We see this NYPA expanded authority "authorizes NYPA to, among other things; "plan, design, develop, finance, construct, own, operate, maintain and improve, either alone, or jointly with other entities through the use of public-private agreements, renewable energy generating projects " as a fatal (possible nail in the coffin) for achieving NYS mandated 70% goal for renewables for 2030. That Finance section is a key point of contention "To finance projects, NYPA may use (1) the proceeds of notes issued pursuant to PAL §1009-a, (2) the proceeds of bonds issued under PAL § 1010, (3) other funds made available by NYPA, or (4) other funds made available to NYPA from non-NYPA sources, such as the State or Federal Government.[4] NYPA may sell the outputs of renewable energy generating projects identified in its Strategic Plan, including (1)RECs to NYSERDA, (2) renewable power and energy or ancillary services to, or into,markets operated by NYISO, and (3) renewable power and energy and RECs or attributes to (A) New York State load serving entities, including the Long Island Power Authority, (B) manufacturers of green hydrogen or other zero-emission technology, (C) public entities, such as state agencies and municipalities, (D) community distributed generation providers, energy aggregators, and similar entities, and (e) Community Choice Aggregation communities.[5]

Just forgetting the simple fact that the state taking over these projects looses the accelerated depreciation portion of the capital stack that makes them economical, putting more burden on taxpayers with state borrowing is just untenable. These new projects should be financed by the private sector not NY Taxpayer funds.

NYPA is a unproven developer of renewables and their mgt. of other ESCO's/EPC's to do this just adds another section of uncertainty/cost that is just uninsurable & not acceptable to taxpayers? The obvious issue is NYPA role in this process seems redundant and does not add value to an existing process, why add more bureaucracy and delays & adds cost at a critical juncture?

While this above action sounds laudable (to the legislature) who passed it, for us doing the actual work we are aghast.

Yes, the NYS DPS seems to have already taken the logistics to insure large projects (the only ones requiring extra resources) are being taken care of this month, thanks Rory.

The Department of Public Service charged with consolidating the environmental review and permitting of major renewable energy facilities and major electric transmission lines in New York State into a single forum that provides a coordinated and timely review of siting permit applications.

“To achieve the ambitious targets set by the Climate Act and replace aging infrastructure, we must reinvent our electricity system to integrate new renewable generation and transmission that is being added continually,” CEO Christian said. “I have complete confidence in Mr. Hagos’ ability to ensure all existing project applications continue to proceed apace. ……..

The Renewable Action through Project Interconnection and Deployment (RAPID) Act, which Governor Kathy Hochul advanced in this year’s budget, created a one-stop-shop for the environmental review and permitting of major renewable energy and transmission facilities within ORES at New York State Department of Public Service (DPS). The goal of the RAPID Act is to speed siting and permitting of major renewable energy and electric transmission facilities, while protecting the environment and responding to community concerns.

ORES Executive Director Zeryai Hagos said, “I would like to thank Rory Christian for today’s announcement. ORES is well-positioned to continue supporting the development of renewable energy generation and electric transmission facilities in New York, and I look forward to continuing the office’s successful track record of executing permits while eliminating red tape, in a way that balances impacts and protects our environmental resources.”

All large-scale, renewable energy projects 25 megawatts (MWs) or larger are required to obtain a siting permit from ORES for new construction or expansion, as are new major electric transmission lines. ORES currently has 14 applications pending approval, totaling approximately 1,860 MWs of clean, renewable energy. Since its inception in 2021, ORES has permitted 18 projects totaling 2,807 MWs (basically half of the solar NY installed) of clean energy, or enough electricity to power more than 750,000 average-sized homes.  Now er have to switch to the immediate need of distributed solar located in the load pocket like the 90 MW we can get installed on Long Island. This is in addition to the GW that can be installed in NYC, this was first evaluated by our famous Dr. Richard Perez of NY’s Atmospheric Science SUNY Albany, now retired. He and his son Dr. Marc Perez are in the process of doing the first priority of a breakthrough grid study proving how we can get to a 100% renewable energy grid, quickly, reliably & at lest cost. After looking at the MISO here they have done 11 other countries and in every case their analysis ha shown success the way to the 21st century clean stable grid! NY’s ISO needs to do the same?

After all we must sadly recognize, the next president’s promise, to shut down offshore wind projects which compromise a significant portion of that NY 2030 -70% renewable energy goal?  https://www.theguardian.com/us-news/article/2024/may/13/trump-president-agenda-climate-policy-wind-power <https://urldefense.com/v3/__https://www.theguardian.com/us-news/article/2024/may/13/trump-president-agenda-climate-policy-wind-power__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLXZc3-I0$>

So thank you Sarhana for caring. New York state Assembly Member Sarahana Shrestha, elected this past November, was a key force in pushing the legislation through the state assembly. Before serving in the assembly, she was an organizer with the Public Power NY Coalition and the New York chapter of the Democratic Socialists of America, helping to rally around the Build Public Renewables Act. She ran on a climate campaign <https://urldefense.com/v3/__https://grist.org/elections/from-new-york-to-texas-climate-candidates-are-gaining-momentum-in-local-races/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLrE0Ye3E$>  aligned with the public power movement <https://urldefense.com/v3/__https://sarahanaforassembly.com/platform/climate/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLSLAuxe4$> , which aims to shift energy utilities from the traditional investor-owned, private model to public ownership and democratic governance. THIS IS THE CORRECT REFORM POINTS, THAT ARE  NOT ACCOMPLISHED BY PUTTING NYPA IN THE DRIVERS SEAT!

Shrestha plan, the new law addresses “fundamental questions like who should own energy, who should serve energy, at what cost, and what kind of energy should we be making, and who should be deciding those things.” ALL IMPORTANT POINT’s, AGAIN NOT ADDRESSED BY THIS NYPA AUTHORIZATION

The bill prevailed despite opposition from groups including the Independent Power Producers of New York, a trade association of energy companies working in renewables and fossil fuels, and the Alliance for Clean Energy New York, a coalition of renewable energy businesses.

For the Renewable Energy industry & ratepayers the question is a FUNDAMENTAL Reform for the stockholder controlled monopoly utility model, which is driving ratepayers prices through the roof. Those will not be served by adding another insurmountable level of bureaucracy and delays while directly competing with the private sector who successfully installed 6 GW of solar power on NY’s grid. This “Power Grab” by NYPA goes against it’s original purpose when created by FDR to fight those same Monopolies who used Sam Ansul’s model of utility trusts to scam the mom and pop Wall Street investors to put their savings behind that scheme, the press proved it was the equivalent to a Ponzi ploy of intertwined collusion and graft. We were not surprised special interests prevailed back then but now it has to be different.

In a joint letter <https://urldefense.com/v3/__https://www.ippny.org/page/legislative-memos-63/news/joint-group-letter-on-governor-hochuls-proposal-for-nypa-to-build-new-renewable-and-energy-storage-960.html__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLYOGtkTI$>  to New York Governor Kathy Hochul, the two organizations and four other groups stated that having the public power authority build renewables “does not create a level playing field with the private sector.” They also raised concerns that the law does not address ongoing barriers to clean energy development in New York, such as delays in connecting to transmission systems and permitting.

I would like to support that comment and state this ceding the installation to NYPA is a bad idea for multiple reasons, including the glaring one that NYPA’s CEO originally said they are ill equipped to manage it:

1.My first point. We are outta of time, I can factually state that after being in the renewable energy business for 50 years. My first company Bio Energy started in ‘75 went public

in ‘81 as BESICORP NY’s first publically traded solar company. We later had to add on a cogeneration business and were responsible for around 2GW of power plants on NY’s grid. This includes the newest LI plant’s capital stack supported by Encap Development-I am one of the founders of BESICORP/SunWize. Steve Levine Emcap’s principal, was a critical member of our executive team and we have worked together on projects since he founded Encap. Steve was one of our oldest customers for my SolaRoll thermal solar products this was in connection with his pioneering efforts of getting Sears into the solar thermal business back in the late 70’s. After we went public in ’81 we asked him to come aboard and manage our power plant business. It started a long way back in the midst of our PURPA pant developments in NY. My old company, Besicorp had successfully completed development of numerous independent power plants in the United States involving almost $2 billion in financing. He was involved in the capital stack funding of the power plant Caithness Long Island Energy Center is a 350 MW natural gas fired power power plant in Yaphank, New York on Long Island operated bCaithness Energy. It began operation in 2009 as the first major baseload plant to be built on Long Island in over 30 years, and by 2020 produced the second most net energy generated among power plants on Long Island. Yes the newest OLD power plant on LI. The last article ten (the expedited power plant siting process in NY) permitted plant was ours was approximately 600MW NG plant that we were originally responsible for and was transferred to Empire Generating to develop. Those of you who were in the business for a length of time might remember our BESICORP subsidy company SunWize that we built to the largest PV distributer in the US after founding it in 1992 we sold it a decade later to a international company and it still exists today only focussing on remote grid battery systems. Time is up for ratepayers patience for excessive charges, for continued environmental costs and health costs due to dirty power. The law says 70% renewable energy by 2030 & 100% by 2040 https://www.eia.gov/state/print.php?sid=NY#:~:text=New%20York%20law%20requires%2070%25%20renewable%20electricity%20by%202030%20and%20100%25%20carbon-free%20electricity%20from%20both%20renewable%20sources%20and%20nuclear%20energy%20by%202040.%20In%202022%2C%20renewable%20sources%20and%20nuclear%20power%20combined%20supplied%2051%25%20of%20New%20York%27s%20total%20in-state%20generation%20from%20utility-scale%20and%20small-scale%20facilities.
<https://urldefense.com/v3/__https://www.eia.gov/state/print.php?sid=NY*:*:text=New*20York*20law*20requires*2070*25*20renewable*20electricity*20by*202030*20and*20100*25*20carbon-free*20electricity*20from*20both*20renewable*20sources*20and*20nuclear*20energy*20by*202040.*20In*202022*2C*20renewable*20sources*20and*20nuclear*20power*20combined*20supplied*2051*25*20of*20New*20York*27s*20total*20in-state*20generation*20from*20utility-scale*20and*20small-scale*20facilities.__;I34lJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJSUlJQ!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLrk5j0yE$> Tom Dinapoli NYS controllers report DiNapoli: Improved Planning Needed for New York To Achieve Its Clean Energy Goals | Office of the New York State Comptroller <https://urldefense.com/v3/__https://www.osc.ny.gov/press/releases/2024/07/dinapoli-improved-planning-needed-new-york-achieve-its-clean-energy-goals__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLV_McHTw$> says we are not meeting that legislative mandate, which was before the recent election promising Drill drill drill and cancelling renewables!
2.Secondly, As someone who appeared/commented continually before the DPS since the late ‘90‘s when governor Pataki passed net metering of residential solar systems. Allowing the fair trade reimbursement of excess power returned to the grid to local homes’businesses by any residential project and the first ever system was on LI in Greenport. I was there that day to witness it. The group I founded for my subsidiary company SunWize 30 years ago this month is NYSEIA, I was their representative for net metering before the NYS DPS back then with DPS Paul Powers as the lead. We also were the seminal founders of independent power producers NY IPPNY. Been there done that, including testifying in 2015 at the origination of Renew the energy vision resulting in VDER. REV — the States “vision” for the New York Public Service Commission’s Reforming

the Energy Vision <https://urldefense.com/v3/__https://www.utilitydive.com/news/ny-regulators-issue-groundbreaking-rev-order/369026/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLdq2MEyc$> proceeding eventually leading to VDER. I will confess I'm the one who named it Darth VDER (AKA Star Wars) for good reason? There have been just too many stops and starts in NY regulations for renewable energy for the industry to survive another earthquake besides the new federal administration threatening to kill offshore wind and end the IRA tax credits. The worse VDER mistake was when after announcing an allocation 100's of MW (pre seeded) gobbled up the funds in a couple of days & then the dry $ desert ensued?

We are out of time literally and figuratively, it is impossible for the renewable energy industry to survive another misguided rethinking of a vulnerable group of companies that, possibly, has a chance now of exploding because the industry produces a cheaper more reliable and clean alternative than any other and by by the way it is faster to install. Please don't try fixing what isn't broke at this critical time over the next 4 years. We would be happy to solve the backlog of projects on the queue issue as well as deal with phasing out 50 year old polluting base loads / peaker plants sooner. The plan starts with a Perez grid study originally proposed to LIPA 5 years ago?

The initial NYPA 40 projects with 3.5GW resulted in that we have seen in the past more upstate large projects located above Leeds NY, the choke point between the upstate and downstate (Dirty Grid). We need distributed energy projects downstate in the load pocket where 40% of the states entire energy use is consumed. This NYPA process has failed in this first obvious need.

The grid is radically changed recently from a no GW usage jump, a flat model of growth, to one that sees many challenges like AI super computer data centers adding another 9% load quickly, the certainty of transportation electrification load jumps since new ICE cars will be banned soon in NYS & further electrification conversions away from fossil fuel like heat pumps. We can success fulfill this with clean energy based on a scientific plan, not with throwing spaghetti at the wall and seeing what sticks. Scattering more large projects upstate is just not a good plan!

The old flat growth grid is filed for history:

The new two way energy flow grid with 100% renewable energy is mandated in legislation for NY’s 21st century clean energy future!

Back in the day the NYDPS said- The cost of meeting the superpeaks alone reaches about $450 million per year, according to Zibelman.

Instead of building power plants to help meet these superpeaks, Zibelman wants New York to better manage the existing grid through the flexibility in demand and the wave of distributed resources that are already coming onto the grid.

“We don’t need to build new assets or bring in new supply,” Daly said. “We just better optimize the supplies that are already out there.”

“We’re moving away from a centralized grid where everything is solved at the level of the bulk power system,” Zibelman said at an industry conference <https://urldefense.com/v3/__https://www.utilitydive.com/news/is-new-york-the-future-of-the-utility-industry/267066/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLtzsz6xw$>  ……..

Unspoiled by the usual tensions <https://urldefense.com/v3/__https://www.utilitydive.com/news/battle-brewing-in-south-carolina-over-utilitys-solar-proposals/363602/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLy_HOrlE$>  between utilities and new market entrants, the REV order establishes the framework needed to leverage distributed energy resources as assets on the grid.

Utilities must transform into “market-makers” who solve problems at the edge of the system, Zibelman explained. “The ability to manage load is the solution, not the problem.” ALL GOOD POINTS REV NEVER FIXED.

You can see the trend line, of average retail cost of NY electricity and don’t forget this includes all the cheap utilities upstate NY!

REV literally was the promise “not realized”, what we got instead is a continued rapid increase in the cost of commodity electricity so exorbitant that the governor was forced to transfer a billion in taxpayer funds back to the pockets of monopoly utility stockholders hands to prevent massive cutoffs of average and LMI ratepayers accounts starting in covid and now years beyond. This can’t continue to happen with out a ratepayers rebellion in the voting box?

More than 1.2 million customers statewide owed $1.8 billion, and 60% of these customers were from New York City and Long Island. Obviously with demand rates now adding time of use charges it just got exceedingly worse recently! Choosing between food and paying energy bills is a growing problem in the U.S., a problem known as energy poverty that impacts 5.2 million people <https://urldefense.com/v3/__https://www.nature.com/articles/s41467-021-27673-y__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLR3rqc7s$> who live above the federal poverty line. The price of electricity has already increased 29% <https://urldefense.com/v3/__https://www.cbsnews.com/news/price-tracker/__;!!MQuuhw!yJhjuPlHtCVnjF3XNXhaWKgKAMrncv06JjMnAglbD9w5iI6yGqDSvjLXKSPJpyMplGKqIuyACt254Z2ChLVqxTCdkkDLzXUFIB0$> since 2019, and that cost is only expected to increase moving forward.

Early on: According to the Public Service Commission, utility arrears have increased by over $700 million since the start of the Covid-19 pandemic. This brings the total unpaid electric and gas bill to almost $1.5 billion in New York. This is unsustainable NYS can’t afford to pay utilities for bad decisions based on relying on dirty inefficient fossil fuels. NY taxpayers picked up that Covid charge but it’s still happening more now.

Energy costs are determined by several factors, from heat's impact on infrastructure to the price of natural gas and more, but it's the heat that creates a dangerous feedback loop: higher global temperatures fuel extreme weather that increases energy consumption and requires higher costs for maintenance. CA’s governor Newsom is caught in that vice today and NY is very close behind. California Governor Gavin Newsom signed an executive order meant to help reduce electric costs for Californians. Good luck with that Gov….

Please work with NYSEIA, The Renewable Energy Coalition, NY BESS & all other stakeholders to solve the fundamental reform issues & not impose regulations from above that just exacerbate, the problems we face nationally over the next 4 years to meet our urgent clean energy goals.

**Last Name:** Cramer

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

The times call for visionary leaders. There is no time to waste.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. — Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Personal Comments Regarding NYPA Renewables Strategic Plan

I am writing regarding the New York Power Authority's ("NYPA") October 8, 2024 Renewables Strategic Plan ("Strategic Plan").

I feel that NYPA can fruitfully expand the ambition and focus of its clean energy procurement in at least two ways.

First, NYPA operates a number of fossil fuel-fired generating facilities including 11 small natural gas power plants. NYPA has committed to retiring all of its fossil fuel units by 2035. However, it does not appear that NYPA is sufficiently utilizing its clean energy procurement planning to facilitate the retirement of these fossil units. It should work with NYISO and local transmission owners to assess any grid reliability issues that may arise from the retirement of the Authority's fossil units and identify opportunities where renewable energy and/or energy storage development can mitigate or fully remedy those issues. Based on that information, NYPA should expand its clean energy procurement to include renewable energy and energy storage projects that will facilitate the expeditious retirement of the facilities in its fossil fleet to reduce the pollution burden on residents of affected communities.

Second, in furtherance of NYPA's gap-filling role in supporting renewable energy development, I commend the Authority's efforts to engage developers whose clean energy projects are uncertain or unlikely to move forward. To that end, I think NYPA should increase the ambition of its current procurement and engage in outreach to developers of projects that recently rejected their 2023 class year cost allocations. I see value in NYPA's engagement with developers that recently rejected class year allocations where's NYPA's support for the projects or their related interconnection requirements could make them economically viable and bring them to fruition.

Finally, I am worried that that NYPA's statutory obligation to maintain a majority ownership stake in clean energy projects it develops will hamper the Authority's effectiveness in supporting New York's renewable energy goals. As NYPA notes, the majority ownership requirement prevents it from "selling down" projects to renew its pool of available resources for clean energy development. Eliminating that requirement would enable NYPA to cycle its capital more quickly and leverage its support to a greater number of projects. It may also make it easier for NYPA to attract private capital. I would support NYPA's efforts to change the enabling legislation to remove the Authority's majority ownership requirement to maximize its ability to support clean energy buildout.

Respectfully submitted,

Nivo Rovedo

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** We need to build 15 GW of public renewables. Environmental disasters are getting more and more frequent every year. My uncle's house almost burned down 3 weeks after almost getting destroyed in a tornado. The next door neighbor wasn™t so lucky. This is New York! We don™t get tornados and forest fires, at least we didn™t. We need to do everything we can to prevent more climate disasters

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** I live in upper Manhattan, and climate change is happening right in my backyard. There's regular flooding in Inwood Hill Park, and more frighteningly, during our abnormally hot, dry fall, several brush fires broke out there. My apartment was hazy with smoke.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

Projects being abandoned partway through completion at soaring rates are indicative of the state public works prioritizing profit over progress. Private developers back out of construction projects, citing lack of profit, and the state has not done enough to curb these greedy declinations by mandating work on promised projects be completed. We give millions in tax breaks to foreign interests parking their money in empty Park Avenue penthouse. We can find the money.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Governor Hochul and Mr. Driscoll,

As a long-time New Yorker, born and raised in the beautiful Capital District, and a long-time resident of bustling New York City, I™m scared. I™m scared because the climate crisis is no longer a distant threat”it's here, and its effects are felt more and more each year. From record-breaking hurricanes and devastating flooding to increasing wildfires and heat waves, it's clear that New York, like the rest of the world, is facing unprecedented challenges. What scares me most is that, despite the urgency of the situation, we are not moving fast enough to prevent even worse outcomes for future generations.

As we confront these intensifying impacts, New York State must act decisively to meet the climate goals set by the Climate Leadership and Community Protection Act (CLCPA) of 2019. We are at a crossroads, where the decisions we make today will determine whether we can mitigate the worst effects of climate change and build a more resilient, sustainable future. Yet, the recent draft strategic plan for the New York Power Authority (NYPA) falls far short of the scale required to meet the CLCPA's 70% renewable electricity target by 2030 and 100% by 2040.

Governor Hochul, your leadership has been instrumental in advancing clean energy initiatives in New York, from spearheading the ConnectALL initiative to supporting the growth of renewable energy and expanding transmission projects. You have shown a commitment to ensuring that New York is a leader in addressing climate change, creating green jobs, and promoting energy equity. As our state's leader, you understand that the transition to a clean, renewable energy economy is not just about reducing emissions”it's about ensuring economic justice, public health, and resilience for every New Yorker.

Mr. Driscoll, under your leadership, NYPA has made impressive strides toward clean energy goals, including transformative transmission projects and partnerships with major institutions to install solar and storage. Your focus on innovative energy solutions has undoubtedly brought New York closer to its climate targets, and your continued leadership will be critical in ensuring we achieve the full decarbonization that New Yorkers demand.

However, we are still not on track to meet the necessary scale of investment in renewable energy to ensure New York's future sustainability. NYPA's current plan proposes only 3.5 gigawatts (GW) of renewable energy by 2030”a far cry from the 15 GW that we urgently need to meet CLCPA goals. This will not be enough to address growing demand, especially in communities downstate and in the Hudson Valley, nor will it fulfill the promise of equitable, green jobs and a clean energy future.

To truly lead the way in renewable energy, I urge you to increase the planned capacity to at least 15 GW of renewable energy by 2030, in line with the demands of New Yorkers and the NY State AFL-CIO, the Building Trades Council, and the International Brotherhood of Electrical Workers (IBEW). This would represent a bold commitment to the future of our state, generating not only clean energy but also good-paying union jobs, and meeting the needs of the most vulnerable communities.

In addition to the total capacity, I encourage you to consider the following key revisions to NYPA's strategic plan:

Increase planned capacity to at least 15 GW to meet the goals of the CLCPA and ensure a just transition for all workers and communities.
Implement a detailed plan for phaseout of peaker plants by 2030, as required by law, to address public health concerns and reduce pollution in heavily burdened communities.
Commit to at least 5 GW for the Hudson Valley and downstate New York, where energy demand is greatest, and prioritize distributed energy resources in underserved communities.
Decarbonize public institutions, particularly public schools and universities, by siting renewable energy projects on SUNY and CUNY campuses and building enough capacity to meet their energy demands.
Redirect economic development funds from multinational corporations to fund renewable energy projects, reducing the financial burden on New York residents while advancing our climate goals.

Hold additional public hearings in underserved regions of the state, such as Central New York and the North Country, to ensure that every community has a voice in the energy transition.
Governor Hochul, Mr. Driscoll, New York has the potential to become the nation's clean energy leader, setting the stage for a sustainable future that benefits all of us. By increasing the scale of renewable energy deployment, we can ensure that our state remains a model of climate leadership, green jobs, and resilience for future generations.

I look forward to your leadership in making New York a place where innovation, climate action, and social justice go hand in hand.

Sincerely,
Michael Roytburd

**Comments:** Dear Governor Hochul and Mr. Driscoll,

I am a lifelong resident of the state of New York, currently residing in the city of Ithaca, and it is my great dream to see the beginnings of a Green New Deal enacted here in New York. It will create green union jobs and it will make New York a model for the rest of the country and the rest of the world. Let's show them what climate adaptation looks like by building 15 GW of public renewables!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Governor Hochul,

I am a 32 year old Astoria resident, born and raised in New York. My husband and I just got married this past year and as we look to the future and hope to plan our family I feel deeply conflicted at the future we are building for not only future children but ourselves. Donald Trump being elected to office was not only a huge blow to social and economic progress but I huge hindrance to our battle against climate change. I can™t stop thinking about what the future will look like if we don™t take significant measures to build a greener more sustainable world. I hope you will step up in this moment and hold New York accountable on its climate goals.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is

unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I helped write and spent years organizing for the Build Public Renewables Act. It's heartbreaking to see it's not being implemented fully, even as more of our neighbors die in climate-fueled disasters and heat waves.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources. Please also site more renewables in Central NY,

where Micron may come and use more energy than the entire state of Vermont. We also have aging nuclear reactors we need to proactively replace with renewables in Oswego, NY rather than continuing to spend billions bailing them out. We have an abundance of wind energy off of Lake Ontario, so please site wind energy here, and solar canopies on buildings and parking lots.

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Governor Hochul, buckling on this issue is unconscionable. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** Dear Gov. Hochul,

My name is Joseph Rosinski and I live in Mount Vernon, N.Y. I am writing in support of building at least 15 GW of renewable energy by 2030.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Many thanks,
Joseph Rosinski
Mount Vernon, NY

**Comments:** Hello Gov. Hochul -- I live in Stuy Town, on East 14th street in Manhattan, which got flooded by Hurricane Sandy. Cars were floating on Ave C. My sister lives in Peter Cooper Village, just north of my apartment in the same complex. They saw timber from only-God-knows-where floating across East 20th.

I was heartened by our historic 2019 Climate Leadership and Community Protection Act. It made NY the most pathbreaking of states! But where is the effort from you -- YOU -- to make sure we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040?

We need the 15 GW of power that gets us to Climate Leadership and Community Protection Act goals.
You and I both know the NYPA's draft strategic plan for renewables only proposes to create 3.5 GW. Not enough. No good. Insufficient.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030. I stand in support of this demand, in line with the NY State AFL-CIO, the Building Trades Council, and thousands of other New Yorkers who have sent letters to NYPA leadership.

The draft strategic plan is riddled with inadequacies.  Remedies include revisions to:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

_____

Given the incoming administration in Washington, states must lead in addressing the climate crisis!

The crisis is now,  so embracing a great expansion of renewable energy is essential.  Commit to at least 15 GW of renewable energy for NYS.

Empowered by the Build Public Renewables Act what NYPA does, or fails to do, will impact the health and safety of our  children and grandchildren; whether they have clean air to breathe or clean water to drink.

NYPA needs to dramatically increase to build 15 GW of renewable energy instead of the 3.5 GW in its proposed plan.

NYPA’s plan has too few projects downstate or in NYC where there is the largest demand so NYPA’s renewable energy projects must  include at least 5 GW for NYC.

Polluting peaker plants must be closed by 2030 so at least 5GW of renewable power are needed for NYC.

NYS will not meet its 2030 target of a 70% reduction in the burning of fossil fuels without a much larger expansion of public, accountable, renewable energy.

The strong labor standards in the Build Public Renewables Act can create thousands of good paying jobs for New Yorkers if NYPA acts more boldly to ensure NYS meets its 2030 and 2040 targets.

NYPA and NYS  must not be subsidizing corporations like Amazon, Citibank, or Lockhead , who have fed climate disaster

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Dear Ms. Cathy Hochul and Mr. Justin Driscoll,
I'm writing to you from Munich, Germany where I'm spending 3 days at ISPO Sport Conference learning about sustainable textiles.

It's embarrassing to be an American amongst Chinese suppliers unsure if we'll continue to do business with them this upcoming year due to Trump's impending tariffs.

It's embarassing to be an American amongst European brands who are actively working together (instead of against) their government to build sustainable action into their legislation within the next 3 years.

While the demands within the textile sector sound impossible, this is only because I am an American whose leaders place value on profit for corporation's executive above its employees, the community, the environment and literally all else. Every European company representative I've spoken to is embracing this moment as an opportunity for necessary growth. Yes, it will be challenging by isn't that what business moguls are always telling us? That the greatest successes come through hard work and struggle?

At a time when our country faces great uncertainty with questionable leaders in the highest positions, it is this narrow window New Yorkers have to take responsibility to do good for our state, the country, and the world. 3.5 GW is not nearly enough to make a change. We demand 15 GW renewable energy projects by 2030 as the bare minimum.

Thank you for your time,
Jessie Hutt
Ridgewood, Queens
New York

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____
_____

Dear NYPA Board Members,

My takeaways from the 11/21/24 call, is that you should call this “WOKE ENERGY” and I will explain why;

I am writing to express my strong opposition to NYPA’s current energy planning, which unfairly burdens middle-class ratepayers to subsidize electricity rates for low-income households. This approach, as outlined in the 11/21/24 call, is both inequitable and unsustainable. Middle-class families are already strained by rising costs, and forcing us to absorb additional financial burdens will only push us into poverty. This policy of “freebies” for low-income households is not only detrimental to middle-class stability but also harmful to the very people it intends to help. Dependency on handouts traps individuals in poverty rather than empowering them to achieve upward mobility. This plan will erode the foundation of New York’s working families and create long-term economic stagnation.
Furthermore, the results of the recent presidential election signal a major policy shift.

Donald Trump’s victory indicates that the nation is moving away from the misguided energy policies promoted by the Climate Leadership and Community Protection Act (CLCPA). NYPA’s continued focus on these initiatives is a waste of time and taxpayer dollars. Offshore wind, solar, and Battery Energy Storage Systems (BESS) have proven to be unreliable, environmentally damaging, and costly. These projects offer no meaningful benefits to ratepayers or taxpayers, and their adoption risks further harm to the state’s economic and environmental health.

If NYPA is committed to renewable energy, it must prioritize hydropower, a proven and reliable source that aligns with New York’s renewable energy definitions. Hydropower has successfully provided affordable and dependable energy for decades, and it deserves significantly more focus in NYPA’s future projects.

It is imperative that NYPA reevaluate its priorities. Stop extorting the middle class to fund unsustainable policies, abandon unreliable and harmful energy projects like offshore wind and BESS, and refocus efforts on viable solutions like hydropower. New Yorkers need an energy plan that supports economic growth, environmental health, and equity—not one that undermines these critical goals.

Sincerely,
Tim Kramer
TIM KRAMER

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I'm an Upper Manhattan resident, writing to urge NYPA to build the full, legally required fifteen GW of renewable energy by 2030, and to develop a plan to expediently shut down the polluting peaker plants that harm me and my neighbors, and destabilize our climate. I live in a neighborhood that's in the ninety-fifth to one hundredth percentile nationwide for multiple air pollutants. In the last month, I looked up from my desk to the smell of wildfire smoke seeping in from outside, and watched brush fires burn down acres of a treasured city park because of this unprecedented drought. The climate crisis is here, and we don't have time to waste. We have a huge opportunity here to improve New Yorkers' health and resiliency by moving away from polluting energy sources towards renewable energy, by NYPA has to lead the way to realize that vision. I urge you to take up the mantle of leadership and pledge to construct the full, legally required 15 GW of renewables by 2030. Thank you for your time.

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy

discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As an 82 year old great grandmother of 2 year old twins, I remember the past and have a keen eye on the future.  I remember when the weather was more

predictable even without today's technology because it resembled past weather events.  I remember when keeping your house warm enough in cold winter was affordable.  We need to begin by building at least 15 gigawatts of public renewable energy facilities right away, as the legislature passed the bill for.  Private companies have not done the job and the NY Power Authority is the way to ensure affordable energy while meeting NY's climate goals.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

**Comments:** I'm a resident of Clinton, NY, in the Mohawk Valley.  We need more renewable energy as quickly as possible.  I'm doing my part but buying an EV (done) and switching to heat pumps (soon) but for all of this to work we need more renewable energy as quickly as possible.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. **Comments:** In order to meet our LL97 emissions targets, I have upgraded my apartment. To truly meet these emission targets we need the supply side to delivery "clean" energy to my apartment/the grid so as the demand side does move to more electrical-based energy equipment, we can use less and less fossil fuels. So, as we face more storms and more climate change events in our state and nation, we cannot allow New York State to fall behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. New York should be a leader for our country and the world by meeting our commitments. We, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. — Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am a resident of Ithaca, NY and a graduate student at Cornell University. As a student studying green technologies at Cornell, I have been proud to learn of New York State's pioneering investments in its green economy. I am writing in support of revisions to the NYPA Renewables Strategic Plan that would strengthen NY's clean energy capacity and support job creation within the green energy sector.

I believe that NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. **Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects.

Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

**First Name:** Cary

**Last Name:** Kittner

**Comments:** My son is a victim of Hurricane Helene in Florida. What we do in New York matters!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** It is possible to have New York in 2040 that runs on 100% renewable energy, built by a new era of union jobs. The wind and sun make our bills go down, our air safe for children to breathe, and our future safe to imagine.

New York passed the Build Public Renewables Act, empowering our state's public power authority to harness all our power“ water, solar, wind, and more “ for the good of the people. As we face unprecedented hurricanes and climate devastation across the globe, New York State needs to lead by fulfilling the intent of this Act which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. New Your needs to meet the CLCPA goals. The NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.
You need to use the leadership entrusted to you that makes this happen for New York and lead the way for it to happen in all 50 States.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Central Hudson pricing and policy are out of control, inflicting serious hardship and harm on residents. A public utility should never be a "for-profit" corporation. Service to the residents must come before shareholder profit. Their delivery cost is several times the cost of the actual energy used. This has to stop. Seriously, lives are at stake.

Additionally, as we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. — Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** Hi,
I'm a new mother to an 8 month old baby. Climate crisis is the thing that keeps me up at night, that gives me a pit in my stomach, that aches when I look at my baby and think about her future. It is THE MOST IMPORTANT issue to me right now. Please, do all that you can, as fast as you can, to transition our city to renewable energy - imagine if you could overdeliver! You would be known worldwide for setting the standard.

Let's lead into the solarpunk future.

Thank you.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Please. We must think of our future, our children's future.
This cannot be overlooked, and unfortunately we've run out of time to push it off until later. I urge you to please, please do the right thing.

Best,
Jillian

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without

this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.
