**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** I am a resident of New York State's ecological crown jewel, the Adirondack Park. In my time living in the north country over just the last 10 years, I've seen an incredible shortening of our winters. A huge portion of this region's tourism is in winter sports (skiing, snowmobiling, etc), and the warmer winters are going to hit our region hard, economically. The warmer summers are also already affecting us, as we have seen multiple areas in the region experience record-breaking flooding in the last 5 years. Roads are getting washed away in Long Lake, people's homes are getting destroyed in Malone, and the cost of constantly rebuilding our rural infrastructure is adding up.

New York State wanted to do something about this, so we passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the targets of 70% renewable electricity by 2030 and 100% by 2040. These targets were laid out in the Climate Leadership and Community Protection Act in 2019. Unfortunately, NY is falling far behind on our CLCPA goals. NYPA's draft strategic plan for renewables proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. This is untenable. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership. If New York doesn't set the example, who will?

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

**Comments:** My name is Theo and I am a current resident in NYC. I am writing to urge NYPA to increase the planned capacity for renewables to 15 GW. It is important to me that more projects be planned for the Hudson Valley and downstate New York given our high energy demand compared to other regions in the state. Please support public institutions such as SUNY and CUNY in the transition to renewables, and provide a detailed plan for the phaseout of peaker plans. Thank you.

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

_____

Attention NYSERDA, NYPA and Governor Hochul -

Governor Hochul’s leadership has placed New Yorkers on a dangerous and unsustainable path. The policies under the Hochul and Biden administrations, from skyrocketing energy costs to costly and ineffective climate projects, are hurting middle-class families and small businesses. Instead of pursuing balanced and pragmatic solutions, you’ve adopted measures that betray the hardworking people of this state while favoring political allies and corporate interests.

President Trump will prioritize cutting wasteful government spending and vowed to halt offshore wind projects for their inefficiency, high cost, and lack of meaningful benefits. Ignoring these realities in favor of such initiatives demonstrates a complete disregard for fiscal responsibility and the true needs of New Yorkers. These projects are not only a financial burden but also a distraction from addressing more pressing energy and environmental challenges with viable, cost-effective solutions.

This administration’s aggressive push for electrification and decarbonization under the guise of combating climate change is riddled with contradictions. While you promote the banning of natural gas appliances and mandate costly electric vehicle adoption, your policies directly undermine the economic well-being of residents and businesses. The energy plan’s substantial rate increases, coupled with your push for congestion pricing in New York City, are more examples of how Hochul’s administration is taxing working families into submission. These initiatives will not only strain household budgets but also penalize commuters and small businesses, driving economic activity away from our state.

Adding to the harm, Hochul’s support for offshore wind development is another misguided and costly endeavor. Even developers and the Bureau of Ocean Energy Management (BOEM) admit in their documents that offshore wind projects will NOT impact climate change. These projects are extraordinarily expensive, existing only through taxpayer and ratepayer subsidies, and come at an enormous cost to our environment. Offshore wind turbines threaten marine ecosystems, devastate seafood as a food source, and put fishermen’s livelihoods at risk. Your promotion of these destructive projects reveals a willingness to sacrifice both economic stability and environmental integrity for political posturing.

The hypocrisy in this matter is deeply troubling; support for substantial taxpayer-funded subsidies for the Buffalo Bills’ new stadium. Not only did this deal benefit your husband

William Hochul’s former employer, Delaware North, but it also blatantly defies the climate policies you champion. The stadium deal allows vendors to use natural gas—an energy source you are effectively banning for everyday New Yorkers. Such preferential treatment reveals a pattern of double standards, where political allies and corporate interests benefit while ordinary citizens shoulder the burden.

Meanwhile, following President Biden’s mandates for widespread electrification without addressing the practical implications for energy costs, grid reliability, or alternative solutions for disadvantaged communities. New York’s ambitious goals, while noble in theory, are being implemented with little regard for their disproportionate economic impact on working families or the feasibility of the infrastructure required.

If the goal is equity and sustainability, there should be focus on the financial and logistical burden of these changes onto those least able to bear it? The middle class and small businesses are not pawns for political experiments or ambitious soundbites. They deserve pragmatic, balanced policies that protect their livelihoods while moving toward a sustainable future.

Please prioritize thoughtful leadership, not performative climate gestures that enrich the few while impoverishing the many. I urge you to reconsider your energy policies, halt offshore wind projects and other unreliable renewable energy such as solar and battery stations. Adopt a balanced approach that supports environmental goals without sacrificing the economic stability of New York’s residents and industries.

Respectfully,

Marjorie W Monahan

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

_____

My name is Maria Forbes, thank you for the opportunity to speak during this public hearing. I am a NYCHA resident in the South Bronx and the President of the Clay Avenue Tenants Association for more than 30 years. I have had the opportunity to speak to people all around the world including at the United Nations and on behalf of women in public housing.

I am glad to see this presentation about the NYPA's Strategic Plan and the update regarding their progress in implementing their Expanded Authority. I did not know about the NY Power Authority last year. Though NYPA provides energy to most of the New York Housing Authority's developments, like many people in New York City, I have known Con Edison for years. It has been a learning process to understand the clean energy transition and the role NYPA will play in moving New York State towards its clean energy goals.

The reality is climate change and the need for more renewable energy is here. The energy transition is not just tomorrow, it is now. Last year, I met with the Power Authority, and they shared their goals and plans with me to build renewable energy and update the electric grid. They had me thinking about my old building's power but, most importantly, I was thinking about the children in my community. I am always thinking about children because they will help determine what our future looks like, and they will be the change we want to see in the world.

The Power Authority has been a valuable partner every step of the way and a supporter of my commitment to exposing the youth to STEAM [Science, Technology, Engineering, Arts, and Mathematics]. As a supporter of the United Nations Sustainability Goals, I came back to NYPA with a new idea to evolve my annual Back-to-School Family Day event in the summer.  I knew my young people needed more hands-on learning opportunities about energy, science, and innovation. I did not want them to be left in the dark or behind the times as our energy systems move forward. I applied and was awarded a grant from the NYC Public Housing Fund. I planned an event to give away STEAM kits to the kids, including mini windmills and micro electric cars, to build during the event and to hand STEAM workbooks for the kids to fill out when they were home. NYPA offered additional support by connecting me with Hostos Community College for student volunteers and they brought additional educational resources to make sure the event was a success. Leaders from NYCHA, elected officials, and The United Nations joined the event in August.

Like in NYPA's Strategic plan, we align on doing community education and building the workforce that can help the Bronx and our state move forward. I want to see part of their $25 million workforce development commitment funding go to programs that expose young people to middle school. I believe they will do the right thing and help build a bridge to the place we need to be with more renewable energy like community solar, energy affordability, and a diverse workforce.

I look forward to continuing to work with them and thank you for your time.

Maria Forbes
President
Clay Ave Tenants Association,Inc.

Business Agent
Bronx South District Council Of Presidents

Board Member

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. I see that this project was shelved a couple of years back, only to be brought again when dissenters have moved on - just as was done with the toll plan for Manhattan, taken off the table and then put back on once the election was over.

I am a Long Beach resident, and a physicist with a Ph.D. Without government subsidies, no company would build offshore wind projects. Even with the subsidies, their economic viability is very much open to question, especially since the very expensive cost of maintenance and repair is grossly underestimated.

Further, the aesthetic insult of 950 towers 12 miles offshore is an affront to the beach communities on my barrier reef island. I notice that the wind projects off the Hamptons are around 25 miles offshore. I guess they have more political sway than the middle class folks of Long Beach. (And yes, I checked the NOAA charts for the ocean depth 25 miles out. It is totally feasible to put the wind turbines there.)

Please, please cancel this dumb project, which only benefits the companies involved, their lobbyists, and the politicians who are receiving political contributions from these companies or their proxies.

Yours truly,
Leon Sutton, Ph.D. (Princeton)

In a message dated 12/10/2024 7:30:37 AM Eastern Standard Time

Attention NYSERDA, NYPA and Governor Hochul -

Governor Hochul’s leadership has placed New Yorkers on a dangerous and unsustainable path. The policies under the Hochul and Biden administrations, from skyrocketing energy costs to costly and ineffective climate projects, are hurting middle-class families and small businesses. Instead of pursuing balanced and pragmatic solutions, you’ve adopted measures that betray the hardworking people of this state while favoring political allies and corporate interests.

President Trump will prioritize cutting wasteful government spending and vowed to halt offshore wind projects for their inefficiency, high cost, and lack of meaningful benefits. Ignoring these realities in favor of such initiatives demonstrates a complete disregard for fiscal responsibility and the true needs of New Yorkers. These projects are not only a financial burden but also a distraction from addressing more pressing energy and environmental challenges with viable, cost-effective solutions.

This administration’s aggressive push for electrification and decarbonization under the guise of combating climate change is riddled with contradictions. While you promote the banning of natural gas appliances and mandate costly electric vehicle adoption, your policies directly undermine the economic well-being of residents and businesses. The energy plan’s substantial rate increases, coupled with your push for congestion pricing in New York City, are more examples of how Hochul’s administration is taxing working families into submission. These initiatives will not only strain household budgets but also penalize commuters and small businesses, driving economic activity away from our state.

Adding to the harm, Hochul’s support for offshore wind development is another misguided and costly endeavor. Even developers and the Bureau of Ocean Energy Management (BOEM) admit in their documents that offshore wind projects will NOT impact climate change. These projects are extraordinarily expensive, existing only through taxpayer and ratepayer subsidies, and come at an enormous cost to our environment. Offshore wind turbines threaten marine ecosystems, devastate seafood as a food source, and put fishermen’s livelihoods at risk. Your promotion of these destructive projects reveals a willingness to sacrifice both economic stability and environmental integrity for political posturing.

The hypocrisy in this matter is deeply troubling; support for substantial taxpayer-funded subsidies for the Buffalo Bills’ new stadium. Not only did this deal benefit your husband William Hochul’s former employer, Delaware North, but it also blatantly defies the climate policies you champion. The stadium deal allows vendors to use natural gas—an energy source you are effectively banning for everyday New Yorkers. Such preferential treatment reveals a pattern of double standards, where political allies and corporate interests benefit while ordinary citizens shoulder the burden.

Meanwhile, following President Biden’s mandates for widespread electrification without addressing the practical implications for energy costs, grid reliability, or alternative solutions for disadvantaged communities. New York’s ambitious goals, while noble in theory, are being implemented with little regard for their disproportionate economic impact on working families or the feasibility of the infrastructure required.

If the goal is equity and sustainability, there should be focus on the financial and logistical burden of these changes onto those least able to bear it? The middle class and small businesses are not pawns for political experiments or ambitious soundbites. They deserve pragmatic, balanced policies that protect their livelihoods while moving toward a sustainable future.

Please prioritize thoughtful leadership, not performative climate gestures that enrich the few while impoverishing the many. I urge you to reconsider your energy policies, halt offshore wind projects and other unreliable renewable energy such as solar and battery stations. Adopt a balanced approach that supports environmental goals without sacrificing the economic stability of New York’s residents and industries.

Respectfully,

Marjorie W Monahan

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA’s peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

For the health of the people living in New York, renewable energy is the only choice. Asthma caused by pollution has become rampant. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
- Redirect economic development funds from large corporations and towards renewable energy development.
- Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

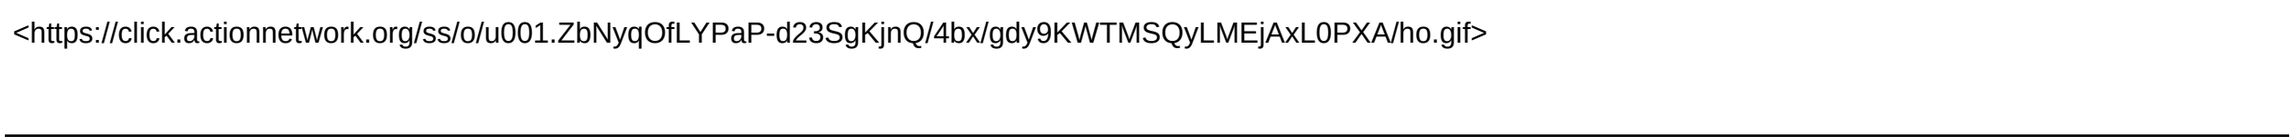
Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources



Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Last Name:** Filion Onserud

**Comments:** NYPA CEO Justin Driscoll,

My name is Hélène Filion Onserud. I live in Brooklyn, NY 11220. As a social worker living and working in Sunset Park for over 30 years, I saw the heavy burden that utilities costs lay on a low-income neighborhood. And I know how limited the future is for today's young people and that it can only become grimmer for future generations as the climate becomes increasingly unstable.
As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As a New York City resident and homeowner, I and my neighbors are hit with increasingly high bills for the energy needed to sustain life and maintain a degree of comfort in our homes. Others can barely manage to pay their heating bills.
As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

I’m pissed that during unprecedented climate collapse you’ve granted National Grid $5B to rebuild its fracked gas infrastructure. Im pissed that my community is facing a severe drought and you’re not doing what you can to meet the mandates of the CLCPA. Im pissed that my cellar flooded twice in 4 years because storm drains, designed in the last century, cannot handle downpours that now regularly occur on rainy days. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together

represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

I want to add to the message below that as a recognized expert in these areas, the demands outlined here are a minimum credible effort to build an environmentally and socially sustainable world starting right here in NY. Anything less is simply not credible in the face of the scale of climate change and the intensity of crises facing New Yorkers who deserve this public investment. Meeting even greater targets with even greater speed would be optimal so the ask here is actually quite moderate and should receive swift approval and implementation. - ASC

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. **Comments:** NYPA CEO Justin Driscoll,

Dear Mrs. Hochul,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the

entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

From your constituent,
Kimberly Z

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build

enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy

demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

The young people of NYC deserve a livable climate future, and so much more. I am a science teacher and I want to be able to tell my students, the young people of Brooklyn, that New York State is fighting for that. I was so happy when Build Public Renewables passed, but if we do not follow through, we are failing our current and future generations. This is urgent and non-negotiable. This is your duty to follow through on your promises. Please, do not fail us and bring both shame and unnecessary climate catastrophe on the people of New York state. We deserve better.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

I am deeply concerned about the effects of climate change on NYC, our energy sustainability, and costs associated with continuing down the dead-end path of propping up the fossil fuel industry. We are long overdue for dramatic changes in how we approach this issue.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA Renewables Strategic Plan Developers ,

I write today regarding the draft Renewables Strategic Plan released by the New York Power Authority earlier this fall.

I am urging NYPA to be much bolder and more visionary with it's plan, and to better center equity and environmental justice.

The current plan falls short by
- Only proposing to develop 3.5 GW in renewable energy projects, far short of what's needed and called for by organized labor, frontline and fenceline communities, and NYS residents at large
- Not incorporating feedback from organized labor organizations through the conferral process, and not including any Thermal Energy Networks in WNY. TENs offer immense opportunity for transitioning pipefitter and other unionized natural gas sector jobs with little need for additional training
- Not including a detailed plan for shutting down NYPA’s peaker plants by 2030 as required by law
- Not considering the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin.
- Not targeting vacant or underutilized industrial brownfields that currently plague environmental justice communities in WNY, and greatly undershooting in goals to utilize vacant public land and public institution campuses. Less than 6% of the proposed capacity is to be sited on public land or institutions, such as vacant or underinvested publicly-owned buildings and land, especially in developed urban areas. Many projects appear to be sited on "greenfield" properties, which have strong public opposition.

Additionally, there is far too little information included in the draft report for the public to engage with an informed lens. For example, the map of proposed projects in the PDF released is low resolution without scaling, and there is no list of specific locations where projects are proposed. In a similar vein, the public engagement process is woefully insufficient - the only public hearings in NYISO Zone A are being held at the NYPA Vista Center in Lewiston, a two-hour ride by public transit from the City of Buffalo, the second largest city in New York State by population.

Western New York, despite the irresponsible marketing narrative about being a "climate haven", is already suffering from the impacts of climate change. The 2022 Christmas Blizzard caused at least 50 deaths, primarily due to widespread power outages and a lack of resiliency and redundancy in the grid. The first tornado ever recorded within the City of Buffalo hit in summer 2024 as part of a record tornado outbreak for WNY and Upstate. The wildfire smoke in summer 2023 made for extremely dangerous outdoor conditions, and related heat waves strained the energy grid, causing brownouts in some areas.

These impacts are not being felt equally - marginalized Frontline communities are feeling the impacts first and worst. Many of these communities are also Fenceline communities which have for decades borne the health and economic costs of environmental injustice from industries adjacent to their homes. We must center equity and develop a plan that will begin to undo the past and current harms these communities are facing.

With that framing in mind, I write today to ask NYPA to strengthen it's draft renewable energy plan by taking the following steps -
- Set a goal to develop 15 GW in new, publicly owned renewable energy projects by 2030.
That’s 25,000 green union jobs and the end of "peaker" plants polluting our neighborhoods. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

- Work with area labor unions to develop projects that rely on green union jobs, and develop at least one industrial-scale Thermal Energy Network in NYISO Zone A.
Working with area unions to build at least one large scale TEN in NYISO Zone A will significantly alleviate concerns of potential job losses in the natural gas sector and reduce public opposition to transitions to renewable energy.

- Prioritize utilizing vacant industrial brownfield properties in project siting.
These sites are located in Environmental Justice communities which are suffering from disinvestment and the health impacts from unremediated contamination. These sites are also usually designed for industrial uses, and usually still have industrial-scale grid connection infrastructure still in place.
Use of greenfield properties, like farmland, meadows, and clear-cut forested areas not only undermine collective goals for carbon emission reduction, but also generates strong public opposition. Use of industrial brownfields will instead build public support for energy transition.
Also of note, at present, the private sector is using these sites to develop high energy demand uses with dubious public benefit, like data centers used for cryptocurrency mining, sometimes even by purchasing private sector peaker plants to use primarily to power computer farms. The current site developer for the former Tonawanda Coke brownfield parcel, for example, is pursuing data center development, which would underutilize the potential for the site, especially given the close proximity to grid connection infrastructure near the shuttered Huntley facility, and the sale of the Fortistar plant to Digihost Technologies is a disturbing development.
An aggressive plan to develop renewable energy projects would make WNY a center for job creation and economic growth rather than an energy consumer and economically stagnant, while putting us on the path to undo the harms to environmental justice communities which have borne and unfair and inequitable health cost burden.

- Prioritize reducing residential energy costs.
Over 130,000 low- to moderate-income households in WNY are considered energy-burdened. An aggressive plan to build publicly owned renewable energy projects will lower utility bills and strengthen the economy of Western New York.

- Strengthen grid resiliency by developing decentralized energy generation projects.
As we learned during the 2022 Christmas Blizzard, our grid and redundancy is woefully insufficient for the needs emerging due to climate change, and the consequences are deadly. We need energy projects and a grid that is modern and resilient, with a mix of local renewable energy projects and battery back-up.

- Redirect economic development funds to renewable energy projects.
Economic development funds are currently being directed to large corporations which are extractive and harmful to environmental justice communities, and have no incentive to change their investment plans. We should shift these funds towards renewable energy development to better align these corporations with a shared regenerative future.

NYPA has an opportunity to take historic action and become the kind of leader that will carry this whole country's climate forward in an equitable manner.

Be bold and be visionary - build 15 GW of public renewable energy projects!

James Jones

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA Renewables Strategic Plan Developers ,

I write today regarding the draft Renewables Strategic Plan released by the New York Power Authority earlier this fall.

I am urging NYPA to be much bolder and more visionary with it's plan, and to better center equity and environmental justice.

The current plan falls short by
- Only proposing to develop 3.5 GW in renewable energy projects, far short of what's needed and called for by organized labor, frontline and fenceline communities, and NYS residents at large
- Not incorporating feedback from organized labor organizations through the conferral process, and not including any Thermal Energy Networks in WNY. TENs offer immense opportunity for transitioning pipefitter and other unionized natural gas sector jobs with little need for additional training
- Not including a detailed plan for shutting down NYPA’s peaker plants by 2030 as required by law
- Not considering the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin.
- Not targeting vacant or underutilized industrial brownfields that currently plague environmental justice communities in WNY, and greatly undershooting in goals to utilize vacant public land and public institution campuses. Less than 6% of the proposed capacity is to be sited on public land or institutions, such as vacant or underinvested publicly-owned buildings and land, especially in developed urban areas. Many projects appear to be sited on "greenfield" properties, which have strong public opposition.

Additionally, there is far too little information included in the draft report for the public to engage with an informed lens. For example, the map of proposed projects in the PDF released is low resolution without scaling, and there is no list of specific locations where projects are proposed. In a similar vein, the public engagement process is woefully insufficient - the only public hearings in NYISO Zone A are being held at the NYPA Vista Center in Lewiston, a two-hour ride by public transit from the City of Buffalo, the second largest city in New York State by population.

Western New York, despite the irresponsible marketing narrative about being a "climate haven", is already suffering from the impacts of climate change. The 2022 Christmas Blizzard caused at least 50 deaths, primarily due to widespread power outages and a lack of resiliency and redundancy in the grid. The first tornado ever recorded within the City of Buffalo hit in summer 2024 as part of a record tornado outbreak for WNY and Upstate. The wildfire smoke in summer 2023 made for extremely dangerous outdoor conditions, and related heat waves strained the energy grid, causing brownouts in some areas.

These impacts are not being felt equally - marginalized Frontline communities are feeling the impacts first and worst. Many of these communities are also Fenceline communities which have for decades borne the health and economic costs of environmental injustice from industries adjacent to their homes. We must center equity and develop a plan that will begin to undo the past and current harms these communities are facing.

With that framing in mind, I write today to ask NYPA to strengthen it's draft renewable energy plan by taking the following steps -
- Set a goal to develop 15 GW in new, publicly owned renewable energy projects by 2030.
That’s 25,000 green union jobs and the end of "peaker" plants polluting our neighborhoods. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

- Work with area labor unions to develop projects that rely on green union jobs, and develop at least one industrial-scale Thermal Energy Network in NYISO Zone A.
Working with area unions to build at least one large scale TEN in NYISO Zone A will significantly alleviate concerns of potential job losses in the natural gas sector and reduce public opposition to transitions to renewable energy.

- Prioritize utilizing vacant industrial brownfield properties in project siting.
These sites are located in Environmental Justice communities which are suffering from disinvestment and the health impacts from unremediated contamination. These sites are also usually designed for industrial uses, and usually still have industrial-scale grid connection infrastructure still in place.
Use of greenfield properties, like farmland, meadows, and clear-cut forested areas not only undermine collective goals for carbon emission reduction, but also generates strong public opposition. Use of industrial brownfields will instead build public support for energy transition.
Also of note, at present, the private sector is using these sites to develop high energy demand uses with dubious public benefit, like data centers used for cryptocurrency mining, sometimes even by purchasing private sector peaker plants to use primarily to power computer farms. The current site developer for the former Tonawanda Coke brownfield parcel, for example, is pursuing data center development, which would underutilize the potential for the site, especially given the close proximity to grid connection infrastructure

near the shuttered Huntley facility, and the sale of the Fortistar plant to Digihost Technologies is a disturbing development.
An aggressive plan to develop renewable energy projects would make WNY a center for job creation and economic growth rather than an energy consumer and economically stagnant, while putting us on the path to undo the harms to environmental justice communities which have borne and unfair and inequitable health cost burden.

- Prioritize reducing residential energy costs.
Over 130,000 low- to moderate-income households in WNY are considered energy-burdened. An aggressive plan to build publicly owned renewable energy projects will lower utility bills and strengthen the economy of Western New York.

- Strengthen grid resiliency by developing decentralized energy generation projects.
As we learned during the 2022 Christmas Blizzard, our grid and redundancy is woefully insufficient for the needs emerging due to climate change, and the consequences are deadly. We need energy projects and a grid that is modern and resilient, with a mix of local renewable energy projects and battery back-up.

- Redirect economic development funds to renewable energy projects.
Economic development funds are currently being directed to large corporations which are extractive and harmful to environmental justice communities, and have no incentive to change their investment plans. We should shift these funds towards renewable energy development to better align these corporations with a shared regenerative future.

NYPA has an opportunity to take historic action and become the kind of leader that will carry this whole country's climate forward in an equitable manner.

Be bold and be visionary - build 15 GW of public renewable energy projects!

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New

Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

**Comments:** NYPA CEO Justin Driscoll,

My name is Anna and I'm a social worker living in Queens. I'm a latina and my best friend is South Asian from Kerala, India. We both see our communities already decimated by climate change and fear the upcoming years of climate-induced migration combined with anti-migrant sentiment around the world. We have to act now to mitigate the harms climate change is already going to cause.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects.

Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

I live in High Falls and have had a large array of solar panels installed for over ten years. We do not have to pay for electricity for all but 2 months a year, when our heat pump is working at a high rate, because it's winter. Even then, we only pay a small % for electricity. About 90% of our energy comes from our panels.'
We're going to move to New Paltz in order to downsize, but we've just installed a heat pump there -and disabled an oil furnace. We will be buying electricity from a clean energy source guaranteed to be all from renewables--and it's cheaper than Central Hudson's non-renewable source. It makes sense to build at least 15GW from renewables in NY State.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

**Comments:** I fully concur with the boilerplate message below. Some additions:
I know 15 GHz is extremely ambitious, but I believe it can and should be done.

I know peaker plants are necessary for balancing the grid in the near term. However, flywheel, battery, and pumped storage facilities should be investigated as alternatives. Also, methane leaks must be documented and prevented.

Electricity subsidies for key companies are great, but it seems to me that a better way to attract investment in New York would be to have actually cheap electricity for everyone, no direct subsidy required. And the best way to do this would be to build lots of renewable generation capacity, which happens to be some of the cheapest generation capacity that can be built, if LCOE is considered. This may lead to large variations in energy price over the course of a day, but I see this as an incentive for the private sector to build short term energy storage, which needs to be done anyway.

Be honest with us about the climate impacts of your various plans, what kind of degrees C warming they lead to in different scenarios, and present that in context of the economic damage to New York as a result.

HVDC transmission lines are awesome and we need more.

New York must set an example for the world, and lead the way.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. Governor Hochul,

There is no time to waste. What kind of legacy do you wish to leave?
Are you going to be one of the predators? Or are you going to be one of the people who care?

If you choose not to decide, you still have made a choice.

Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

**Comments:** Hi Governor,

I grew up in this New York City. I've lived other places, but keep coming back here because it's the greatest city in the world. And it has the potential to be so much more. We can lead the way into the future as a green city. Please don't miss out on this opportunity to make New York City and state a better place for future generations, both environmentally and financially. Be courageous. Commit to building least 15 GW of renewable energy by 2030.

New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades

Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:**

Dear Governer Hochul,
Last year, 2023, was the hottest year on record, and will be surpassed by 2024. Only a fool thinks climate change in not happening.C02 levels are higher than at anytime for past 15 million years. We We are facing a crisis never before seen in human history.  We must think big. The danger is in petty half-steps that are good more for publicity than meaningful change. Given the rich, bought-out fathead who occupies the White House now. the states must lead. Please commit New York to building 15 GW of renewable

energy by 2030. We installed a solar PV array last year at home and bought an EV. We're doing our part. and I can tell you it has been a very happy experience.

Those leaders only are admired who do the right thing , which in this case can only to be set and pursue a renewable future.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants

**Comments:** NYPA CEO Justin Driscoll,

Remember the CLCPA? I do. It mandates big action not just a little here and a little there. So get with it by taking the steps necessary to protect New York for the future.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is so unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

Especially with Trump returning, we need Blue states to show that we can quickly transition to renewable energy. NY's climate plan targets 15 GW of renewable energy by 2030, but we are falling behind.

NY's Build Public Renewables Act directs the NY Power Authority to build enough public renewables to meet our targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan only proposes 3.5 GW - well short of those goals!

These are some other problems that need to be fixed:

- very few projects are planned for downstate NY and the Hudson Valley ...where electricity demand is greatest.
- there is still no detailed plan for shutting down NYPA’s peaker plants by 2030 as required by law.
- the draft plan leaves out feedback from labor organizations like AFL-CIO and Building Trades Council, who represent 2.5 million workers in NY and are calling for 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA’s financial situation, the draft does not consider the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Rona Fried

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** NYPA CEO Justin Driscoll,

I am very concerned that we are not doing more to advance renewables in New York.

As a consumer, my energy costs are higher than ever, while I have cut back on energy use as much as I can.

The health of the environment is very important to me as it is essential for public health.

I want to see public renewables increase greatly in New York to address energy costs, and environmental and public health.

New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. **Comments:** NYPA CEO Justin Driscoll,

I have been concerned about the climate crisis since learning about it in school in the 1990's and puzzled by the failure to do what we need to do to address it. We need to stop burning fossil fuels. Now. And that means that we need to build enough public renewables. It also means that we need to reconsider our priorities and do things that build a stronger society: good, stable jobs; spending on basic human needs and the foundations of justice, peace, and civic engagement rather than spending on more things that we don't need and subsidizing multinational corporations focused on profit rather than the common good.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is

unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

Hi, my name is Michael, I'm a Brooklyn resident terribly worried about the ongoing climate crisis. I was a teenager when Superstorm Sandy hit New York, which caused my family to live out of a hotel for 6 months. The recent drought and wildfires in the area have been especially concerning to me, given that we can only expect these deadly "once-in-a-lifetime" events to happen much more frequently.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build

enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. **Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA’s financial situation, the draft does not consider the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA Renewables Strategic Plan Developers ,

I write today regarding the draft Renewables Strategic Plan released by the New York Power Authority earlier this fall.

I am urging NYPA to be much bolder and more visionary with it's plan, and to better center equity and environmental justice.

The current plan falls short by
- Only proposing to develop 3.5 GW in renewable energy projects, far short of what's needed and called for by organized labor, frontline and fenceline communities, and NYS residents at large
- Not incorporating feedback from organized labor organizations through the conferral process, and not including any Thermal Energy Networks in WNY. TENs offer immense opportunity for transitioning pipefitter and other unionized natural gas sector jobs with little need for additional training
- Not including a detailed plan for shutting down NYPA's peaker plants by 2030 as required by law
- Not considering the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin.
- Not targeting vacant or underutilized industrial brownfields that currently plague environmental justice communities in WNY, and greatly undershooting in goals to utilize vacant public land and public institution campuses. Less than 6% of the proposed capacity is to be sited on public land or institutions, such as vacant or underinvested publicly-owned buildings and land, especially in developed urban areas. Many projects appear to be sited on "greenfield" properties, which have strong public opposition.

Additionally, there is far too little information included in the draft report for the public to engage with an informed lens. For example, the map of proposed projects in the PDF released is low resolution without scaling, and there is no list of specific locations where projects are proposed. In a similar vein, the public engagement process is woefully insufficient - the only public hearings in NYISO Zone A are being held at the NYPA Vista Center in Lewiston, a two-hour ride by public transit from the City of Buffalo, the second largest city in New York State by population.

Western New York, despite the irresponsible marketing narrative about being a "climate haven", is already suffering from the impacts of climate change. The 2022 Christmas Blizzard caused at least 50 deaths, primarily due to widespread power outages and a lack of resiliency and redundancy in the grid. The first tornado ever recorded within the City of Buffalo hit in summer 2024 as part of a record tornado outbreak for WNY and Upstate. The wildfire smoke in summer 2023 made for extremely dangerous outdoor conditions, and related heat waves strained the energy grid, causing brownouts in some areas.

These impacts are not being felt equally - marginalized Frontline communities are feeling the impacts first and worst. Many of these communities are also Fenceline communities which have for decades borne the health and economic costs of environmental injustice from industries adjacent to their homes. We must center equity and develop a plan that will begin to undo the past and current harms these communities are facing.

With that framing in mind, I write today to ask NYPA to strengthen it's draft renewable energy plan by taking the following steps -
- Set a goal to develop 15 GW in new, publicly owned renewable energy projects by 2030.
That's 25,000 green union jobs and the end of "peaker" plants polluting our neighborhoods. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

- Work with area labor unions to develop projects that rely on green union jobs, and develop at least one industrial-scale Thermal Energy Network in NYISO Zone A.
Working with area unions to build at least one large scale TEN in NYISO Zone A will significantly alleviate concerns of potential job losses in the natural gas sector and reduce public opposition to transitions to renewable energy.

- Prioritize utilizing vacant industrial brownfield properties in project siting.
These sites are located in Environmental Justice communities which are suffering from disinvestment and the health impacts from unremediated contamination. These sites are also usually designed for industrial uses, and usually still have industrial-scale grid connection infrastructure still in place.
Use of greenfield properties, like farmland, meadows, and clear-cut forested areas not only undermine collective goals for carbon emission reduction, but also generates strong public opposition. Use of industrial brownfields will instead build public support for energy transition.
Also of note, at present, the private sector is using these sites to develop high energy demand uses with dubious public benefit, like data centers used for cryptocurrency mining, sometimes even by purchasing private sector peaker plants to use primarily to power computer farms. The current site developer for the former Tonawanda Coke brownfield parcel, for example, is pursuing data center development, which would underutilize the potential for the site, especially given the close proximity to grid connection infrastructure near the shuttered Huntley facility, and the sale of the Fortistar plant to Digihost Technologies is a disturbing development.
An aggressive plan to develop renewable energy projects would make WNY a center for job creation and economic growth rather than an energy consumer and economically stagnant, while putting us on the path to undo the harms to environmental justice communities which have borne and unfair and inequitable health cost burden.

- Prioritize reducing residential energy costs.
Over 130,000 low- to moderate-income households in WNY are considered energy-burdened. An aggressive plan to build publicly owned renewable energy projects will lower utility bills and strengthen the economy of Western New York.

- Strengthen grid resiliency by developing decentralized energy generation projects.
As we learned during the 2022 Christmas Blizzard, our grid and redundancy is woefully insufficient for the needs emerging due to climate change, and the consequences are deadly. We need energy projects and a grid that is modern and resilient, with a mix of local renewable energy projects and battery back-up.

- Redirect economic development funds to renewable energy projects.
Economic development funds are currently being directed to large corporations which are extractive and harmful to environmental justice communities, and have no incentive to change their investment plans. We should shift these funds towards renewable energy development to better align these corporations with a shared regenerative future.

NYPA has an opportunity to take historic action and become the kind of leader that will carry this whole country's climate forward in an equitable manner.

Be bold and be visionary - build 15 GW of public renewable energy projects!

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW " nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers™ skyrocketing energy bills.
— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW
— Include a detailed plan for phaseout of NYPA's peaker plants
— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
— Redirect economic development funds from large corporations and towards renewable energy development.
— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Re: Comments on the NYPA draft Strategic Plan

Dear Governor Hochul and NYPA Board Members:

Thank you for the opportunity to add my thoughts to the discussion of NYS's electrical power plans. I am not a technical person but I know that since the Climate Leadership and Community Protection Act plus all the regulatory enhancements to consolidate power in the hands of a few and from the hands of citizens like me, we have had neither effective leadership nor protection from globally based companies destroying our lands, coastal and lake waters. I oppose the NYPA Draft Strategic Plan. More of the same does not effectively or efficiently combat climate change; even if it did, NYS's contribution to climate degradation is so small stacked against a global problem.

New York: The Land of Renewable Energy Subsidies was authored by Shelby Veazey in October 2017. How prescient! In my opinion, not much progress has been made.

My home's electricity comes from Nationalgrid which occasionally provides information on the fuels it uses to produce that power. I will list the fuel components from the years of 2017 and 2021 respectively: Coal (3%, 2%); Hydroelectric (19%, 14%); Natural Gas (37%; 50%); Nuclear (35%, 27%); Oil (<1%, <1%); Solar (<1%, 2%), Wind (3%, 2%) and assorted other fuels like biomass, solid waste, etc.

Of these listed fuels, it's clear that I depend on hydro, natural gas and nuclear for reliable, consistent energy. In western NY, we are blessed to generate 80-90% of our power with carbon-free energy (hydro and nuclear) sources. Richard Dewey, President of NYISO said in an April, 2023 interview published in the Rochester Democrat & Chronicle that "We're probably curtailing right now." If we are curtailing nuclear and hydro to add the paltry solar/wind/biomass/solid waste and then backing up the intermittency with natural gas, that is just wrong! It is scientifically, socially and transparently irresponsible. Scientifically because natural gas is a polluter; socially because the CLCPA promised

relief for DACs, utility ratepayers are bearing the costs of the CLCPA and valuable acreage and home rule are lost; and transparently because all the press releases coming out of Albany with the exception of those from Comptroller DiNapoli and NYISO fulsomely laud the state's progress towards achieving its renewable goals in the face of warnings from NYISO, FERC and NERC.

I was encouraged to see Gov. Hochul's Climate Summit's emphasis on nuclear power. The USDOE has identified seven sites in NYS where the existing infrastructure could support either a large nuclear buildout or the more modest smaller modular nukes. Next door to me, the Wayne County Ginna Nuclear Power Plant, is seeking expansion. On July 16, 2024, in advance of the Summit, the Wayne County Board of Supervisors unanimously

* RESOLVED that the board expresses its support for the continued operation of the Robert E. Ginna Nuclear Power Plant; and be it further

* RESOLVED, that this body again urges full consideration of Wayne County as a site for any new nuclear facilities that may be developed to assist in meeting NEW York State's goals for reduction in carbon emissions.

I am particularly distressed that the CLCPA is so deficient in protecting disadvantaged communities (DACs). New York Lawyers in the Public Interest explicitly called out four NYS agencies (NYSDOT, ESD, NYSSED, and NYSDOH) in its aptly named report: Flouting the Law. The report carefully examined multiple decisions that flouted the regulations of the CLCPA by these agencies before mistakenly arguing that the state should double down on renewable energy- do more of the same, just do it faster.

Doubling down on the CLCPA is not an option if one reads Comptroller DiNapoli's various reports. Our elected, not appointed, Comptroller continues to point out that the current renewable energy efforts are fundamentally flawed. Politicians can make plans and wish for faster renewable energy options but physics, engineering and economics will always determine the costs and distributed resultant burdens of those plans and wishes.

* The Comptroller's August 2023 report on renewable energy warned that NY's energy goals for 2030 are only within reach IF there is a 200% increase in gigawatt hours above the 2022 production levels. Is this likely? Additionally, he expresses concern that ratepayers have shouldered the $6.7 billion spent between fiscal years 2008/9 and 2020/1 with another $26.5 billion planned for transmission funding.

* The Comptroller's mid-July 2024 audit of NYSERDA and the PSC is also damning: use of outdated data, incorrect calculations, no forward planning, aggregated actual costs are unknown and no estimated ones available and no other sources other than ratepayers identified.

* The Comptroller's July 2024 report on the Clean Energy Fund administered by NYSERDA noted that the Clean Energy Fund is another drain on the state's ratepayers with plans to collect $7.5 billion between 1016 and 1032 using surcharges on utility bills. A December 2022 review stated that the Clean Energy Fund had generally underspent budgets and underachieved performance targets.

* The Comptroller's report on NYS Agriculture in mid-August, 2024 mentions the challenge to agriculture, a $2.7 billion contribution to the state's GDP and an economic

engine to rural communities, of increasing acreage of prime soils lost to solar installations.

The CLCPA contains more expensive and poorly thought out regulations soon to take effect. I live in a consolidated school district which must have an all-electric bus fleet by 2035. My district now has 130 buses, none of them electric. Between now and 2035, the district will have to spend between $19.9 and $26 million dollars in addition to the typical cost of a bus to purchase electric ones to comply with the CLCPA regulation. This expenditure (in 2021 dollars) does not include the costs of installing charging apparatus at the bus garage or training dollars for drivers and mechanics. To make matters worse, one of the towns in this consolidated district has insufficient electricity now to support developments already approved to provide additional housing. The electric bus challenge starts in 2027- all buses purchased after 2027 must be electric.

Current conventional wisdom outside of Albany politicians suggests that EV buses will present challenges to school districts.

* Higher upfront bus costs for the transportation budget since EV buses cost more than clean-diesel buses. Multiple sources note that estimates range from $150-200,000 more per bus added to the basic cost of the bus.

* The infrastructure to charge the new vehicles will add to the transportation operations budget. Charging must take into effect the distance of the bus routes; the longer the route, the more battery is required. The topology of the route; the more hills to climb, the more battery is required.

* Driver and maintenance tech training will need to be revamped. Drivers will need to know how to prepare their buses; techs will need advanced electrical troubleshooting training.

* Battery range and weight are important if we want students to arrive at school safely, warm and on time. Current battery range is about 100 miles depending on air temps (really cold weather depletes batteries as travel and internal heating draw more energy). Hills can become a factor on longer routes on cold mornings and evenings as was learned from stranded Wisconsin students riding in EV buses in the last year or two. If a rural route crosses a small bridge, can the bridge support the very heavy EV bus because of battery weight?

I personally chafe at the removal of Home Rule by ORES as I chose to live in an agricultural community on land that was purchased from one of my town's early families. The soil in my town is 75% prime soil, the type of challenging loss referenced by Comptroller DiNapoli. My home is eligible for placement on the historic properties register according to the State Historical Preservation Office (SHPO). The large planned solar installation for my town will be built on Seneca sacred burial land, acknowledged by SHPO but with various mitigations completely unacceptable to many residents and the Seneca Tribal Historical Preservations Officer. This is cultural genocide. The installer and NYSERDA trumpet the statement that the installation will generate 180MW. But given the incidence of the sun's rays at this latitude and the cloudy skies from proximity to Lake Ontario, the real output will be closer to 36MW. I routinely discard prospectuses from land agents and solar companies who want to lease my land; last year I confronted an individual actually trespassing on my property with surveying devices.

So, in my personal situation, I will pay increased state income taxes and utility rates, increased school taxes, mourn the loss of Home Rule, diminished prime agricultural soil

acreage, confront trespassers and feel shame at the cultural genocide.  Thirty-six megawatts in no way balances the scales of these losses.

PLEASE, NYPA must prioritize non-polluting energy sources like hydro and nuclear.  It must recognize that eminent domain and the lack of community oversight that respects the property rights of landowners pits community members against each other and against Albany politicians.

Politicians can make plans and wish for faster renewable energy options but physics, engineering and economics will always determine the costs and distributed resultant burdens of those plans and wishes.

Respectfully,

Janet Glocker

**Comments:** Dear Governor Hochul,

I am a mother of two school children living in Brooklyn, New York.

Our family is very worried about the climate crisis. It is real and already impacting many communities in the US.

Please do everything you can to ensure that we build the 15GW of renewables that we need to meet our urgent climate goals below. This is even more urgent now that the incoming President has pledged to do everything he can to roll back climate policy and fight climate change.

Thank you for all that you do,

Luki Anderson

---

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW “ nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
— There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
— There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
— Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
— The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
— In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or

reduce New Yorkers™ skyrocketing energy bills.

— While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

— There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

— The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

— Increase the total planned capacity to at least 15 GW

— Include a detailed plan for phaseout of NYPA's peaker plants

— Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

— Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

— Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

— Redirect economic development funds from large corporations and towards renewable energy development.

— Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

Dear Governor Hochul,

I am a mother of two school children living in Brooklyn, New York.

Our family is very worried about the climate crisis. It is real and already impacting many communities in the US.

Please do everything you can to ensure that we build the 15GW of renewables that we need to meet our urgent climate goals below. This is even more urgent now that the incoming President has pledged to do everything he can to roll back climate policy and fight climate change.

Thank you for all that you do,

Luki Anderson

---

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a

large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
- Redirect economic development funds from large corporations and towards renewable energy development.
- Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this

information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities

should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

**Comments:** NYPA CEO Justin Driscoll,

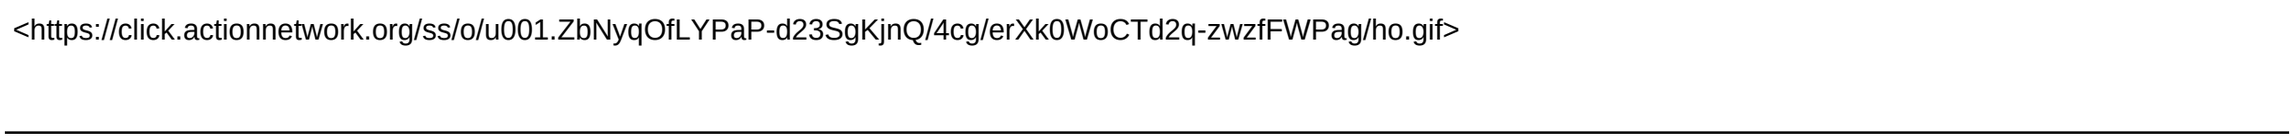
I would really prefer to not die due to climate change, but you people seem to really want to condemn us all to that fate. Could you not?

I’m begging you to build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.



I also urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

To address the above shortcomings in the draft strategic plan, I also need you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Thanks! See you in the Water Wars of 2050

Anna Victoria

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are

already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

When New York passes laws New Yorkers deserve to see them go into effect as written. It’s been incredibly disheartening to see major environmental wins passed by the legislature only to see them dramatically weakened by cowardly leadership. It’s a disservice to voters for Democrats to run on these platforms and support programs like the Build Public Renewables Act and congestion pricing only to take them away. Not only is it sacrificing the health, security and sustainability of our future, it will drive voters further away from the Democratic Party in a time when we need bold leadership more than ever.

I urge New York State to return to what the law mandates and create a plan to build 15 GW of union-job supporting renewables and meet essential climate goals.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Christina DeGaglia

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

**Last Name:** Schles

**Comments:** NYPA CEO Justin Driscoll,

What the hell? Where are my comments? Where is the accountability of my elected representatives and their appointed administrators?

NYS NEEDS TO BUILD OUT THE FULL 15Gw of renewable power.

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

I live in Brooklyn, where I raised my family. I suffer from diabetes and cardiovascular disease, both co-morbidities of climate change. As a child I suffered from Asthma, also a co-morbidity of climate change. Prospect Park burned a week ago from the worst drought in NYC history. NYFD says that they've extinguished over 300 brush fires in the 2nd longest drought in 255 years dating back to when records were first kept in 1869. Plants in my backyard died due to drought. A report on the Hudson River says that it sustains only 1/100th of the life it did as a result of 2.0C warming that now blankets NYC and its waterways. Last year, during tropical storm Ophelia and several years back during

Tropical Storm Ida flooded my cellar when rain deluges exceeded the design capacity of sewer systems. Something that never occurred in the past, but is now a regular occurrence. I've spent over $30k this summer building retaining walls in my backyard to prevent overflows from adjacent properties, something I've never had to do in the 27 years living here. State inaction is diminishing my life and costing me large sums in mitigation costs. Enough!

It appalls me that NYS, after years of work in designing and implementing a climate plan, has both the temerity and laziness to renege on its climate commitments. What feckless and ineffective leadership.

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Ken Schles

IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Last Name:** Karenna Northland

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership

and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

Kathy, check your dang spam folder. Tons of New Yorkers have emailed you about this issue. And I'm emailing again to MAKE SURE you hear my voice. There is really no point in my listing out the whole song and dance. You know the drill. Build Public Renewables Act. We need renewable energy! I don't want the climate to fall into catastrophe in the next ten years! I have plenty of my life left to live! I'm horrified every day by the concerningly high temperatures for the season, or by drought conditions, or air pollution from the forest fires from the droughts. We need to lead the way and show others that public renewables are a viable option, and show that the government has citizens' backs on this.
Additionally, it's literally the law.
Sincerely,
Chloe

Chloe Dorward

- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

John Halpin

**First Name:** Judith

**Last Name:** Shatzky

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority

of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I went with 3 other college students to John Jay College on November 20th for a renewables public hearing since we are all interested in a clean future for ourselves, just to find out that our emails and comments were suddenly marked as “spam”. At yesterday’s NYPA Trustee meeting (December 11), NYPA VP of Communications Charles Imohiosen claimed NYPA received just 272 comments–missing over 5000 New Yorkers. How convenient! This is just as convenient as having my college shut down their internet, printing devices, presentation tools, and blogs@baruch, which is a blog that some professors assign homeworks on. I cannot believe with students as bright as the ones I see in my CIS, Computer and Information Systems class seem more competent and aware of the importance cybersecurity then the adults in charge of cybersecurity at Baruch College or at CUNY. If you will have an outage, can you please make sure not to do so when we are in finals week. Students paid third party printing services like UPS and CVS photo to keep up with our assignments despite the circumstances. Both “cyber incidents” are important in this context since they show how easy it is for institutions to “pull the rug” from under you without dealing with any consequences. At Baruch, my learning has been interrupted at least twice because of these “attacks”. They say my information is safe, yet they don’t prove it. (They are incompetent). If students can overcome obstacles, I’m assuming you can too. Here’s were the draft strategic plan falls short:

The draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

I urge that the NYPA obey the law in the circumstance since the public outcry has been too great and your only further radicalizing people who don't know politics, and want to stay out of politics, but because of the incompetence of republican ran public power authorities, they have to resort to other forms of protest.

Yahir Bunci

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Leila Thurtell

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Last Name:** Rondon

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Daniel

**Last Name:** Matthews

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

Hello,

One of the most important issues to me and my husband is the environment. I urge you to take this letter seriously, even though it has been pre-written. Thank you, EB

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this

information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New

Yorkers’ skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New

Yorkers’ skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Rod Lugo

**Comments:** NYPA CEO Justin Driscoll,

Good Day & Happy Holiday Season to you
I am Ms. Spencer, a NYC resident who's been intensely worried & troubled by high energy bills. Additionally, I've been stressed to the point of suffering significant injury to my wellbeing that forced me into early retirement due to (non-union) work place environmental stressors & wages that did not pay the rent.
I am also a truly concerned NYC citizen, who desires a better future and clean air for my daughter (my child grew up as an asthma sufferer in Brooklyn, NY).
Naturally, I'm concerned that she has worker protections that I did not have, clean air & green job opportunities.
Also, climate change is real & Hurricane Sandy was or should've been a wake up call.

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is

unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Jerry Rivers

- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants
- Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
- Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
- Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
- Redirect economic development funds from large corporations and towards renewable energy development.
- Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

We voted to have you take action, playing politics with our kids future is a desecration of democracy and shows cronyism.

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Constance

**Last Name:** Sakmann

**Comments:** For every month in 2024, temperatures were warmer than usual. As we face hurricanes, floods, and other devastating effects of climate change, I urge NYPA to revise its draft for renewables. Comply with the law, and build at least 15 GW of renewable energy by 2030. The current plan does almost nothing to increase renewable energy sources and combat pollution. Time is running out. There is also not much information about proposed projects, such as phasing out peaker plants by 2030 (as the law requires). Lastly, there is no plan that addresses the renewable energy needs of public schools. The current plan is unacceptable because, by creating only 3.5 GW of renewable energy, it does not prepare for the environment's future. I urge NYPA to correct these flaws by: building AT LEAST 15 GW of renewable energy by 2030, creating green jobs for New Yorkers, using economic development funds from large corporations to develop renewable energy, and creating a detailed plan for the elimination of polluting peaker plants by 2030.

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts

to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

I want my young daughter to be able to the enjoy the same beautiful blue marble we're all used to living on. Two of my friends have decided to forego having children, primarily out of fear for the climate those children would inherit. I'm more of an optimist, and I see the potential that NY has to lead the country (and in turn, the world) in taking meaningful steps to combat the climate crisis. Let's make that happen!

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA’s financial situation, the draft does not consider the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**First Name:** Linda

**Last Name:** Moot

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA’s financial situation, the draft does not consider the Authority’s economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers’ skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Include a detailed plan for phaseout of NYPA’s peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Christine Marullo

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA

renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA’s draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA’s own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
- The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

- Increase the total planned capacity to at least 15 GW
- Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA’s peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Katie Harris

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

Kathy, do you want to go down as the governor who did nothing when something like is happening in LA right now happens in New York? With four years of trump upon us, it is more crucial than ever that we take action at the state level. As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.

There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW

Include a detailed plan for phaseout of NYPA's peaker plants

Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources

Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands

Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers

Redirect economic development funds from large corporations and towards renewable energy development.

Add public hearings in Central New York, the North Country, and the four other boroughs of New York City

Eric Sturm

**Comments:** NYPA CEO Justin Driscoll,

UPDATE: New Yorkers have sent over 5300 comments to NYPA on their draft strategic plan through Action Network, but NYPA currently acknowledges only 1100 public comments total. I urge you to direct NYPA to acknowledge and publish ALL public comments so New Yorkers can be heard!

As we face unprecedented hurricanes and climate devastation across the globe, New York State is falling far behind on our climate goals mandated by the Climate Leadership and Community Protection Act of 2019. To solve this problem, New Yorkers passed the Build Public Renewables Act, which directs the New York Power Authority to build enough public renewables to ensure that we meet the CLCPA targets of 70% renewable electricity by 2030 and 100% by 2040. NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:
There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.

Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.

The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.

In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.

While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.

There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.

The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

NYPA's draft strategic plan for renewables is unacceptable as it proposes to build only 3.5 GW – nowhere near the capacity needed to meet CLCPA goals. Moreover, by NYPA's own admission, it is likely that the majority of these projects will never get built.

To meet CLCPA goals, NYPA must lead the way and build at least 15 GW of renewable energy by 2030, in line with the demands of the NY State AFL-CIO, the Building Trades Council, and thousands of New Yorkers who have sent letters to NYPA leadership.

Beyond total capacity to be built, the draft strategic plan falls short in a number of crucial areas:

- There are very few projects planned for the Hudson Valley and downstate New York, where electricity demand is greatest. Communities in these areas deserve to benefit from reduced pollution, green jobs, and reduced utility bills via the REACH program.
- There is no detailed plan for shutting down NYPA's peaker plants by 2030 as required by law. Peaker plants are a public health disaster for host communities, which are already heavily burdened by other polluting infrastructure.
- Less than 6% of proposed capacity is to be sited on public land or institutions. Public institutions throughout New York would benefit from decarbonization through NYPA renewables and related retrofits.
- The draft plan does not incorporate feedback from important labor organizations through the conferral process. The AFL-CIO and Building Trades Council, who together represent 2.5 million workers in New York State, call for a buildout of 15 GW by 2030. IBEW, which represents workers directly impacted by our energy transition, calls for a large-scale buildout to guarantee job stability in the future for its members.
- In its assessment of NYPA's financial situation, the draft does not consider the Authority's economic development operations, which currently provide massive energy discounts to multinational corporations like Citibank, Amazon, and Lockheed Martin. Some of these discounts could be redirected to capitalize renewable energy projects or reduce New Yorkers' skyrocketing energy bills.
- While the draft plan indicates an intention to partner with communities to develop distributed energy resources, there are no plans or timelines for these projects. Communities should not have to wait for a revised plan a year from now to benefit from distributed energy projects.
- There is insufficient information about proposed projects. The draft plan does not indicate precisely where projects will be sited or what they are estimated to cost. Without this

information it is not possible to provide complete feedback on the plan, including its financial assumptions, business strategy, and impact on communities hosting projects.
The provision for public hearings in the draft plan is inadequate. No hearings are offered for Central New York and the North Country, and only one hearing is provided for the entirety of New York City.

To address the above shortcomings in the draft strategic plan, I urge you to make the following revisions:

Increase the total planned capacity to at least 15 GW
Include a detailed plan for phaseout of NYPA's peaker plants
Plan at least 5 GW for the Hudson Valley and downstate New York, with more attention to distributed energy resources
Fully decarbonize our public schools by siting utility scale and distributed generation on SUNY and CUNY campuses and building enough capacity to meet their energy demands
Ensure that enough capacity is built to create and sustain a pipeline of green union jobs for New Yorkers
Redirect economic development funds from large corporations and towards renewable energy development.
Add public hearings in Central New York, the North Country, and the four other boroughs of New York City
