April 2011

NEW YORK POWER AUTHORITY

**REPORT TO THE GOVERNOR AND LEGISLATIVE LEADERS
CONCERNING ECONOMIC DEVELOPMENT POWER AND
POWER FOR JOBS POWER FOR 2010**

This report is submitted pursuant to Subdivision 14 of Section 1005 of the Public Authorities Law which directs the Power Authority:

To provide to the governor, to the speaker of the assembly, and to the temporary president of the senate, on or before April first of each year, an economic development report including projections for the next succeeding twelve months of the amount of economic development power, expansion power, replacement power, preservation power, high load factor power, municipal distribution agency power and power under the power for jobs programs which will be or is expected to be available with a listing of the current recipients of such power, and data on the number and types of jobs resulting from allocation of such power under each such program. Such report shall include the amount of revenues collected and used in the previous calendar year pursuant to the eighth unnumbered paragraph of this section. Such report shall describe the process by which the authority obtained lowest cost power made available under the power for jobs program. Such report shall contain a record of wholesale power supply bids provided to the authority under a competitive procurement process and the price of power obtained through any alternate methods. Such report shall state the reasons for choosing each specific source of power under each of the foregoing power programs and the price at which that power was available.

A. Economic Development Power

- Projected Availability

Economic Development Power (EDP) is defined in state law (New York State Public Authority Law §1005 as amended by Chapter 313 of the Laws of 2005) as power that is voluntarily relinquished by businesses to the authority, except that it shall not include any power from the Niagara or Saint Lawrence - FDR projects or any power under the Power for Jobs program which may be voluntarily relinquished by businesses, small businesses, and not-for-profit corporations. As of March 31, 2011, 259.70 megawatts (MW) of such power had been voluntarily relinquished by businesses. A balance of 106.7 MW of EDP is currently unallocated. The total quantity of EDP may increase in 2011 if a business purchasing Economic Development Power under a contract signed prior to formation of EDPAB relinquishes such power.

Under the provisions of Chapter 313 of the Laws of 2005, existing EDP customers are eligible, and have been approved, for the rate moderation provided by the Energy Cost Savings Benefit (“ECSB”), created in 2005 and subsequently extended through May 15, 2011. As a consequence, any new allocations of EDP would not have the benefit of ECSB, and thus would need to be sold with commodity costs at market prices (See section, “Power Purchases for the High Load Factor, Economic Development Power and Municipal Distribution Agency Power Programs,” for more information.)

The 2011-2012 enacted State Budget contains provisions that call for the creation of a new hydropower-based economic development program entitled “Recharge New York.” Pursuant to these provisions, Energy Cost Savings Benefit will be extended to June 30, 2012 and then expire.

- Current Allocations

As of March 31, 2011, the Power Authority has approved, upon the recommendation of the Economic Development Power Allocation Board (EDPAB), 52 allocations of EDP to 46 companies totaling 153.0 MW. All current EDP allocations are listed in Exhibit I.

B. Power for Jobs

- Projected Availability

Chapter 316 of the Laws of 1997 established the Power for Jobs (PFJ) program to provide low-cost power to businesses and not-for-profit corporations that agree to retain or create jobs in New York State. In return for commitments to create or retain jobs, successful applicants receive three-year contracts for electricity under the program. The program was to be phased in over three years, with approximately 133 MW being made available each year.

Chapter 386 of the Laws of 1998 amended the Power for Jobs statute to accelerate the distribution of the power, making 267 MW available in Year One. The 1998 amendments also increased the size of the program to 450 MW, with 50 MW to become available in Year Three.

In May 2000, budget legislation (Chapter 63 of the Laws of 2000) was enacted which included provisions authorizing another 300 MW of power to be allocated under the Power for Jobs program. The additional megawatts were described in the statute as 'Phase Four' of the program. Customers who received allocations in Year One were authorized to apply for reallocations. The balance of the power was awarded to new applicants. All 300 MW were allocated by July 2001.

In July 2002, legislation was signed into law (Chapter 226 of the Laws of 2002) which authorized another 183 MW of power to be allocated under the program. The additional megawatts are described in the statute as 'Phase Five' of the program. Customers who received allocations in Year Two or Year Three were given priority to reapply for the program. Remaining power was awarded to new applicants. All 183 MW were allocated by the end of July 2003.

In August 2004, budget legislation (Chapter 59 of the Laws of 2004) was enacted which included provisions to extend benefits for Power for Jobs customers whose contracts expire before scheduled "sunset" of the program, December 31, 2005. Such customers may choose to receive an "electricity savings reimbursement" rebate and/or a power contract extension. Power for Jobs customers with contracts expiring by November 30, 2004 were made eligible for a rebate from the date their contract expired through December 31, 2005. The law also authorized customers to alternatively choose to receive a rebate from the date their contract expired as a bridge to a new contract extension. New contracts would be in effect from a period no earlier than December 1, 2004 through December 31, 2005.

In March 2005, budget legislation (Chapter 59 of the Laws of 2005) was enacted to extend the "sunset" of the program until December 31, 2006. The new law made all Power for Jobs customers with contracts or benefits expiring December 31, 2005 eligible to apply for a one-year extension of benefits in the form of either a contract extension or "electricity savings reimbursement."

In 2006 legislation was signed into law (Chapter 645 of the Laws of 2006) to extend Power for Jobs until June 30, 2007, require NYPA to provide restitution to the Power for Jobs customers who paid more than the local utility rates as a result of 2006 price increases, authorize manufacturers who are Power for Jobs customers currently served by contract extensions to be able to choose to be served by energy savings reimbursement rebates and authorize NYPA to pay the additional costs of the electricity

savings reimbursements, energy costs savings benefits and voluntary contributions to the state treasury to the extent the Authority has sufficient resources.

In 2007 legislation was signed into law (Chapter 89 of the Laws of 2007) to extend Power for Jobs until June 30, 2008. In 2008 legislation was signed into law (Chapter 59 of the Laws of 2008) to extend Power for Jobs until June 30, 2009. In 2009 legislation was signed into law (Chapter 217 of the Laws of 2009) to extend Power for Jobs until May 15, 2010, and in 2010 legislation was signed into law (Chapter 311 of the Laws of 2010) to extend Power for Jobs until May 15, 2011.

The 2011-2012 enacted State Budget contains provisions that call for the creation of a new hydropower-based economic development program entitled “Recharge New York,” to replace the PFJ Program. Pursuant to these provisions, the PFJ Program will be extended to June 30, 2012 and then expire.

- Current Allocations

As of March 31, 2011, there are a total of 427 allocations of Power for Jobs Power to 405 employers totaling 286.9 MW that have been recommended by EDPAB and approved by the Power Authority. A summary of the current Power for Jobs allocations is listed in Exhibit II. The exhibit indicates the type of benefit chosen by the customer – electricity savings reimbursement (rebate) or power contract.

C. Expansion Power

- Projected Availability

Under state law (New York State Public Authority Law §1005), the Authority may contract to allocate or reallocate directly, or by sale for resale, 250 MW of firm hydroelectric power as Expansion Power to businesses in the State located within 30 miles of the Niagara Power Project, provided that the amount of Expansion Power allocated to businesses in Chautauqua County on January 1, 1987 shall continue to be allocated in such county. As of March 31, 2011, a balance of 12.4 MW is available for allocation to eligible businesses.

- Current Allocations

As of March 31, 2011, there are 101 allocations of Expansion Power that have been approved by the Power Authority to 71 companies totaling 237.6 MW. All current Expansion Power allocations are listed in Exhibit III.

D. Replacement Power

- Projected Availability

Replacement Power is the 445 MW of firm hydropower generated by the Authority at its Niagara Project pursuant to Subdivision 13 of §1005 of the Public Authorities Law (Chapter 313 of the Laws of 2005). To qualify a business must have facilities for the receipt of Replacement Power within 30 miles of the Authority's Niagara switchyard and otherwise meet the criteria set forth in PAL §1005(13). Chapter 313 of the Laws of 2005 as amended by Chapter 645 of the Laws of 2006 authorizes up to 70 MW of unallocated Replacement Power to be used for Energy Cost Savings Benefit awards to mitigate rate increases to benefit eligible business customers throughout the State, provided that the full 70 megawatts is deemed to be available for allocation in Western New York. As of March 31, 2011, a balance of 23.7 MW is available for allocation to eligible businesses.

- Current Allocations

As of March 31, 2011, there are 130 allocations of Replacement Power that have been approved by the Power Authority to 76 companies totaling 421.3 MW. All current Replacement Power allocations are listed in Exhibit IV.

E. Preservation Power

- Projected Availability

Chapter 313 of the Laws of 2005 established the "Preservation Power" program to govern future allocations of hydropower within the counties of Jefferson, St. Lawrence and Franklin Counties from quantities sold to Alcoa and GM Powertrain from the St. Lawrence-FDR Power Project. Thus, the Preservation Power Program is comprised of 490 MW, including 478 MW of firm and interruptible hydropower currently sold to Alcoa and 12 MW of hydropower that was previously sold to GM Powertrain.

As of March 31, 2011, 10 MW has been relinquished by GM Powertrain. The Authority is working on the relinquishment of the remaining 2 MW. Of the 10 MW, there is currently 8.7 MW of Preservation Power available for allocation to eligible businesses.

- Current Allocations

As of March 31, 2011, Alcoa continues to utilize 478 MW and GM continues to utilize 2 MW of Preservation Power. During 2010, the first new allocation of Preservation Power of 1.3 MW was allocated to Florelle Tissue Corporation. In return for the allocation, Florelle committed to create 75 jobs relating to the construction and operation of its facility in Jefferson County.

F. High Load Factor Power

- Projected Availability

The High Load Factor Power program, established by state law (New York State Public Authority Law§1005), allocates 96.25 MW to energy-intensive industries throughout the state. Eligibility for the program is limited to expanding industries demonstrating that electricity costs are equal to at least 7.5% of product costs, an electric load of 5 MW or greater and demand of 540 kilowatts/month or greater. High Load Factor allocations are eligible and have been approved for Energy Cost Savings Benefits as described in Section A.

- Current Allocations

As of March 31, 2011, the Power Authority has approved eight allocations of High Load Factor power to six companies totaling 96.25 MW. All current High Load Factor allocations are listed in Exhibit V.

G. Municipal Distribution Agency Power

- Projected Availability

The Municipal Distribution Agency Power program, established in state law (New York State Public Authority Law§1005) provides 96 MW for downstate Municipal Distribution Agencies (New York City Public Utility Service Agency; the County of Westchester County Public Utility Service; the Nassau County Public Utility Service and the Suffolk County Public Utility Service). Municipal Distribution Agency allocations are eligible and have been approved for Energy Cost Savings Benefits as described in Section A.

- Current Allocations

As of March 31, 2011, the Power Authority, upon the recommendation of various agencies, has approved 27 allocations of Municipal Distribution Agency power to 25 companies totaling 61.4 MW. All current Municipal Distribution Agency allocations are listed in Exhibit VI.

H. Competitive Procurement of Power for the Power for Jobs Program

Chapter 316 of the Laws of 1997 created the Power for Jobs program to provide lower cost electricity to businesses and not-for-profit corporations throughout the State to stimulate new jobs and opportunities for New Yorkers. Under that chapter of law, up to half of the program's 400 MW was authorized to be provided from the Fitzpatrick

Nuclear Power Project and the balance to be obtained from other suppliers through a competitive procurement process. The 1997 law also required the bids selected to provide power at costs lower than those of the Fitzpatrick plant. Chapter 386 of the Laws of 1998 amended the program, increasing the amount of power available from 400 MW to 450 MW.

Chapter 63 of the Laws of 2000 expanded and extended the program until December 31, 2005, and authorized the New York Power Authority to provide power from alternative sources if those sources have prices lower than power obtained via the competitive procurement process. This provided the Authority the flexibility to request additional bids if the initial responses to the RFP were insufficient.

Since the program began in 1997, the Power Authority has issued twenty-two Requests for Proposals (RFPs) – (see Exhibit VII).

Public notice of an upcoming RFP is provided by advertisements in newspapers around the State notifying would-be bidders of the program. As established under RFP # 18, issued March 1, 2006 for the period May to December 2006, NYPA now solicits bids each month for its prospective requirements in the following month. This procedure has continued under RFP # 19, issued October 25, 2006 for the January to June 2007 period, under RFP # 20, issued July 16 2007 for the July 2007 to June 2008 period, under RFP # 21, issued May 20, 2008 for the July 2008 to June 2009 period, and under RFP # 22, issued July 21, 2009 for the July 2009 to May 2010 period based upon the legislation extension described earlier. Each month energy marketers and power providers are sent letters inviting them to participate in the bidding process. On average, the RFP is sent to about 20-40 parties who have requested proposals.

To be considered, proposals are required to be submitted complete and on time, conforming to the specifications and other requirements of the RFP. Bidders are required to provide sufficient financial guarantees and comply with applicable local, state, and federal laws and regulations, including those of the New York Independent System Operator. Bidders are expected to indemnify and hold the Power Authority harmless against all loss, damage and expense of every kind on account of adverse claims, which could arise from transactions with the bidder.

Bids are evaluated based on whether they meet the minimum requirements for the bid; whether selecting their bids would result in the lowest possible cost to the Power for Jobs customers; and whether the bidder's financial and operational ability is adequate to carry out the terms of the agreements. The environmental impact of the bidder's power supply is also a factor in the evaluations. Bidders with emissions from the source of capacity at or below the set emissions limitations receive "tie-breaker" preference over other bidders with the same price.

RFP No. 22 is the most recent RFP for which the Power Authority accepted competitive bids. Exhibit VII shows the history of the bids provided to the Authority under the competitive procurement process. The energy and capacity requirements are currently being met through market purchases.

I. Power Purchases for the High Load Factor, Economic Development Power and Municipal Distribution Agency Power Programs

When the High Load Factor (“HLF”), Economic Development Power (“EDP”) and Municipal Distribution Agency (“MDA”) power programs were established, energy and capacity for the programs were supplied by the FitzPatrick Nuclear Power Project. The project was sold by NYPA to the Entergy Corporation in 2000. Upon the sale of the plant, NYPA purchased the output from the plant by a purchased power agreement (PPA). The PPA expired on December 31, 2004. Chapter 313 of the Laws of 2005 removed references to the FitzPatrick Nuclear Power Plant as the source of power for the programs and clarified that NYPA may use power from other sources to continue to serve the customers in these programs. Energy for the programs was supplied by NYPA ISO purchases, primarily in the day ahead market (DAM), at prices published on the ISO website for each hour of the year. Similarly, capacity requirements were secured through purchases in the ISO markets.

The tariffs containing the customers’ rates are Service Tariffs ST-1, ST-1S, ST-35, ST-50 and ST-50A. The long-standing base production rates of \$8.16/kw and \$23/mwh were initially modified when the pricing option ended for certain customers (Option 3) on December 31, 2006. Upon termination of the pricing options, the customers sought and were approved for Energy Cost Savings Benefits (“ECSB”) status. Since the initial approval, the ECSB status has been expanded to include virtually all the HLF, EDP and MDA power program customers and has been subsequently extended three times. More recently, at the Trustees August 2010 meeting, ECSB customers’ status and rates were extended to May 15, 2011. In total, there are currently 22 different ECSB production rates. The average of the 22 ECSB rates is \$9.62/kw and \$28.34/mwh.

The 2011-2012 enacted State Budget contains provisions that call for the creation of a new hydropower-based economic development program entitled “Recharge New York”. Pursuant to these provisions, Energy Cost Savings Benefits will be extended to June 30, 2012 and then expire.

J. Power Supply for the Replacement, Expansion and Preservation Power Programs

The supply source of energy and capacity for the Replacement Power program and the Expansion Power program is the Authority’s Niagara Power Project. The supply source of energy and capacity for the Preservation Power program is the Authority’s St. Lawrence-FDR Power Project. In circumstances when Great Lakes water levels present low flow conditions, if desired by the customers NYPA purchases energy from the ISO markets and sells it to program customers at cost. There were no recorded low flow conditions during 2010 and for the first 3 months of 2011.

Replacement Power, Expansion Power and Preservation Power (Alcoa/Reynolds/GM) rates are set contractually. Replacement Power base rates were

approved by the Power Authority Board of Trustees in 1994, initiating a plan to phase-in rate adjustment such that Replacement Power and Expansion Power base rates would be equal in 2006. The base rates are \$3.80/kw and \$6.50/mwh. Expansion Power base rates were set in 1995. Every May, the base rates are subject to a multiplier that is a composite of four indices (The indices are: Producer Price Index (PPI) for Industrial Commodities, GNP deflator, PPI for Industrial Power, and a fuel multiplier). In 2008, the multiplier was 1.36 and when multiplied by the base rates, produces a billing rate of \$5.17/kw and \$8.84/mwh.

Alcoa base rates are \$4.040/kw and \$7.984/mwh as established in 1998. Similar to Replacement Power and Expansion Power, the base rates are subject to an annual index adjustment. (The three Alcoa indices are: PPI for Industrial Commodities less Fuel, Energy Information Administration based Regional Industrial Rate Average and PPI for Industrial Power). Current billing rates for the two Alcoa plants are \$4.311/kw, \$8.519/mwh and \$4.383/kw, \$8.666/mwh. (The difference in the rates for each plant is a result of contract provisions approved when the plants were separately owned.) GM Powertrain in Massena is served at rates identical to Expansion Power and Replacement Power rates.

At the March 2009 Trustee meeting, the Trustees suspended the multiplier adjustment for the RP/EP and Preservation Power customers. The rates cited above are currently in effect as of March 31, 2011.

K. Net Revenues Produced by the Sale of Expansion Power

For the year ending December 31, 2010, there was \$6,431,000 in net revenues available from the sale of Expansion Power. Net revenues are defined in the eighth unnumbered paragraph of Section 1005 of the Power Authority Act as *"any excess of revenues properly allocated to the sales of expansion power over costs and expenses properly allocated to such sales."*

	2010 (\$)
Gross Production Revenues:	\$22,528,000
Production Costs:	<u>\$16,097,000</u>
Net Production Revenues:	\$ 6,431,000

The Authority is directed under Section 1005, no less than annually, to identify net revenues and submit, for Economic Development Power Allocation Board (“EDPAB”) approval, an Economic Development Plan (“Plan”) for the use of such revenues as Industrial Incentive Awards. Net revenues for the 2008 and 2009 periods, \$7,598,000 and \$7,802,000 respectively, were utilized in conformance with the Plan.

In 2009, EDPAB approved a modified Plan to make Industrial Incentive Awards available to companies in New York State that are at identifiable risk of closure or relocation to another state. During 2010, the Trustees approved Industrial Incentive Awards to five businesses, bringing the total number of recipients to ten, as shown in Exhibit VIII.

(1) Pre-ISO bids combined the cost of both capacity and energy. Under the NYISO, capacity and energy are purchased separately.

(2) New York Power Pool

(3) The New York Independent System Operator began operation 11/18/99

(4) The bids also included substantial monthly option charges fees of up to \$91,000/month depending on the delivery zone and quantity.

(5) These numbers reflect the change to a monthly bid solicitation process.

INDUSTRIAL INCENTIVE AWARD CUSTOMERS AS OF MARCH 31, 2011

<u>Business</u>	<u>City</u>	<u>Maximum⁽²⁾ Annual Award</u>	<u>Jobs Committed⁽³⁾</u>	<u>Term</u>
Buckingham Manufacturing Co., Inc.	Binghamton	\$15,000	196	Up to 3 years
CA, Inc. ⁽¹⁾	Islandia	\$3,600,000	-	Up to 7 years
Erie Canal Harbor Development Corp.	Buffalo	\$3,700,000	-	Up to 20 years
GE Aviation Systems LLC	Bohemia	\$200,000	-	Up to 3 years

Owl Wire and Cable, Inc.	Canastota & Rome	\$700,000	-	Up to 3 years
Positive Promotions, Inc.	Hauppauge	\$100,000	460	Up to 3 years
Total		\$12,517,000	1,646	

1. The Industrial Incentive Award to CA Inc. is contingent upon expiration of Energy Cost Savings Benefits (ECSB); therefore, there has been no Industrial Incentive Award payment obligation through May 15, 2011, ECSB's current expiration date.

2. Generally, the Industrial Incentive Award is based on a rate discount (\$/kWh) off of actual electricity costs; therefore, actual award payments depend on market prices, with total payments capped at the "Maximum Annual Award" amount.

3. For 3 IIA customers with other types of NYPA allocations - CA, Inc. (EDP), GE Aviation Systems LLC (PFJ), and Owl Wire and Cable, Inc. (EDP) - the "Jobs Committed" are not listed in this Exhibit VIII to avoid double counting.
