Generating more than electricity

**When it comes to saving electricity,
a little knowledge can go a long way.
Try these easy energy-saving tips at home
and you'll be surprised to find how...**

Small changes make a

BiG

difference

- Install foam insulators in electrical outlets to eliminate drafts.
- Replace standard light bulbs with Compact Fluorescent Light (CFL) bulbs. (CFL bulbs use 75% less energy and last 10 times longer.)
- Use time and motion sensors so that lights go on only when needed.
- Keep thermostats at 68 degrees to save on heating costs. (Lowering temperatures by 5 degrees can reduce bills by nearly 20%.)
- Wash only full loads of laundry and use cold water.
- Heat food faster using less energy with microwave and toaster ovens. (Smaller appliances use 75% less energy than electric ovens.)
